

# PRACTICAL RELIABILITY ENGINEERING

---

Third Edition

PATRICK D.T. O'CONNOR

# Contents

<b>Preface to the First Edition</b> .....	xiii
<b>Preface to the Second Edition</b> .....	xv
<b>Preface to the Third Edition</b> .....	xvii
<b>Acknowledgements</b> .....	xviii
<b>Notation and Definitions</b> .....	xix
<b>1 Introduction to Reliability Engineering</b> .....	1
Why Teach Reliability? .....	1
What is Reliability? .....	2
Probabilistic Reliability .....	3
Load and Strength .....	5
Repairable and Non-repairable Items .....	6
The Pattern of Failures with Time (Non-repairable Items) .....	7
The Pattern of Failures with Time (Repairable Items) .....	8
The Development of Reliability Engineering .....	8
Courses, Conferences and Literature .....	10
Organizations Involved in Reliability Work .....	11
Reliability as an Effectiveness Parameter .....	11
Reliability Programme Activities .....	12
Reliability Economics and Management .....	13
Bibliography .....	16
<b>2 Reliability Mathematics</b> .....	17
Introduction .....	17
Variation .....	17
Probability Concepts .....	19
Rules of Probability .....	21
Probability Distributions .....	27
Discrete Distributions .....	31
Continuous Distributions .....	36
Summary of Continuous Statistical Distributions .....	45

Statistical Confidence .....	45
Statistical Hypothesis Testing .....	49
Non-parametric Inferential Methods .....	55
Goodness of Fit .....	56
Series of Events (Point Processes) .....	60
Computer Software for Statistics .....	63
Bibliography .....	63
<b>3 Probability Plotting</b> .....	<b>65</b>
Introduction .....	65
Ranking of Data .....	65
Probability Plotting Techniques .....	68
Lognormal Probability Plots .....	72
Weibull Probability Plots .....	72
Extreme Value Probability Plotting .....	80
Hazard Plotting .....	82
Choosing the Distribution and Assessing the Results .....	86
Probability Plotting for Binomial Data .....	87
Conclusions .....	93
Bibliography .....	94
<b>4 Load-strength Interference</b> .....	<b>95</b>
Introduction .....	95
Distributed Load and Strength .....	95
Analysis of Load-strength Interference .....	98
Effect of Safety Margin and Loading Roughness on Reliability (Multiple Load Applications) .....	100
Practical Aspects .....	107
Bibliography .....	109
<b>5 Reliability Prediction and Modelling</b> .....	<b>110</b>
Introduction .....	110
Fundamental Limitations of Reliability Prediction .....	111
Reliability Databases .....	115
The Practical Approach .....	115
Systems Reliability Models .....	117
Availability of Repairable Systems .....	120
Modular Design .....	125
Block Diagram Analysis .....	126
State-space Analysis (Markov Analysis) .....	128
Monte Carlo Simulation .....	134
Reliability Apportionment .....	136
Standard Methods for Reliability Prediction and Modelling .....	136
Conclusions .....	137
Bibliography .....	138

<b>6 Reliability in Design</b> .....	139
Introduction .....	139
Computer-aided Engineering .....	139
Quality Function Deployment .....	140
Environments .....	142
Design Analysis Methods .....	144
Load-strength Analysis .....	144
Failure Mode, Effects and Criticality Analysis (FMECA) .....	146
Fault Tree Analysis (FTA) .....	152
Reliability Predictions for FMECA and FTA .....	156
Parts, Materials and Processes (PMP) Review .....	156
Non-material Failure Modes .....	157
Human Reliability .....	158
Design for Production .....	158
Critical Items List .....	160
Management of Design Review .....	160
Configuration Control .....	162
Bibliography .....	162
<b>7 Design for Variation</b> .....	163
Introduction .....	163
Statistical Design of Experiments and Analysis of Variance .....	164
Non-parametric Methods .....	178
Randomizing the Data .....	179
Engineering Interpretation of Results .....	180
The Taguchi Method .....	181
Evolutionary Operation .....	184
Conclusions .....	186
Bibliography .....	187
<b>8 Reliability of Mechanical Components and Systems</b> .....	188
Introduction .....	188
Overload .....	189
Strength Degradation .....	189
Fatigue .....	190
Wear .....	195
Corrosion .....	196
Materials .....	197
Components .....	198
Processes .....	198
Bibliography .....	199
<b>9 Electronic Systems Reliability</b> .....	200
Introduction .....	200
Reliability of Electronic Components .....	202
Electronic System Reliability Prediction .....	214
Reliability in Electronic System Design .....	216

Electromagnetic Interference and Compatibility (EMI/EMC).....	224
Parameter Variation and Tolerances .....	225
Design for Production, Test and Maintenance .....	230
Bibliography .....	231
<b>10 Software Reliability .....</b>	<b>233</b>
Introduction.....	233
Software Failure Modes .....	235
Software Structure and Modularity.....	237
Programming Style .....	239
Fault Tolerance .....	239
Languages .....	240
Real-time Systems .....	241
Data Reliability .....	241
Software Checking.....	242
'Formal' Design and Analysis Methods .....	243
Software Testing .....	244
Error Reporting.....	245
Software Reliability Prediction and Measurement .....	247
Hardware/Software Interfaces.....	251
Conclusions .....	252
Bibliography .....	254
<b>11 Reliability Testing.....</b>	<b>255</b>
Introduction.....	255
Planning Reliability Testing.....	257
Test Environments.....	258
Accelerated Tests .....	264
Failure Reporting and Corrective Action Systems (FRACAS) .....	267
Bibliography .....	268
<b>12 Analysing Reliability Data .....</b>	<b>270</b>
Introduction.....	270
Pareto Analysis.....	270
Reliability Analysis of Repairable Systems .....	272
CUSUM Charts.....	278
Exploratory Data Analysis and Proportional Hazards Modelling .....	279
Reliability Demonstration.....	282
US MIL-STD-781/MIL-HDBK-781.....	282
Combining Results Using Bayesian Statistics .....	289
Non-parametric Methods .....	291
Reliability Growth Monitoring .....	292
Making Reliability Grow .....	298
Bibliography .....	300
<b>13 Reliability in Manufacture .....</b>	<b>301</b>
Introduction.....	301
Control of Production Variability .....	301
Control of Human Variation .....	305

Acceptance Sampling .....	306
Improving the Process .....	309
Quality Control in Electronics Production .....	315
Failure Reporting and Analysis .....	319
Quality Assurance Standards .....	320
Conclusions .....	321
Bibliography .....	321
<b>14 Maintainability, Maintenance and Availability .....</b>	<b>322</b>
Introduction .....	322
Maintenance Time Distributions .....	323
Preventive Maintenance Strategy .....	324
FMECA and FTA in Maintenance Planning .....	327
Built-in Test (BIT) .....	327
Maintainability Prediction .....	328
Maintainability Demonstration .....	328
Design for Maintainability .....	328
Integrated Logistic Support .....	329
Bibliography .....	329
<b>15 Reliability Management .....</b>	<b>331</b>
Corporate Policy for Reliability .....	331
Integrated Reliability Programmes .....	331
Reliability and Costs .....	332
Product Liability .....	338
Reliability Standards .....	338
Specifying Reliability .....	339
Contracting for Reliability Achievement .....	342
The Reliability Manual .....	343
The Project Reliability Plan .....	344
Use of External Services .....	345
Customer Management of Reliability .....	346
Selecting and Training for Reliability .....	349
Organization for Reliability .....	350
Managing Production Quality Control .....	353
Quality Audit .....	354
Total Quality Assurance .....	356
Conclusions: Greed, Fear and Freedom .....	357
Bibliography .....	359
<b>Appendix 1 The Standard Cumulative Normal Distribution Function</b> .....	<b>360</b>
<b>Appendix 2 Values of <math>y = \exp(-x)</math></b> .....	<b>362</b>
<b>Appendix 3 Percentiles of the <math>\chi^2</math> Distribution</b> .....	<b>363</b>
<b>Appendix 4 Values of the <math>F</math>-distribution</b> .....	<b>365</b>

Appendix 5	Kolmogorov–Smirnov Tables .....	383
Appendix 6	Rank Tables (Median, 5%, 95%) .....	385
Appendix 7	Matrix Algebra Revision .....	397
Appendix 8	Organizations Involved in Reliability Work .....	399
Appendix 9	Reliability Data Systems .....	401
Index	.....	403
