<i>Preface</i> . . . . .	xi

## Magnetostatic Waves

*J. D. Adam, M. R. Daniel, P. R. Emtage, and S. H. Talisa*

I. Introduction . . . . .	2
II. Magnetic Materials for Magnetostatic Waves . . . . .	7
A. Magnetic Materials . . . . .	7
B. Growth of YIG Films . . . . .	10
C. YIG Film Evaluation . . . . .	18
III. Magnetostatic Propagation and Generation . . . . .	25
A. Propagation in an Isolated Ferrite Layer . . . . .	25
B. More Complex Systems . . . . .	35
C. Generation of Magnetostatic Waves . . . . .	40
IV. Applications of Magnetostatic Wave Devices . . . . .	52
A. Broad-Band Receiver Applications . . . . .	52
B. Magnetostatic Wave Delay Lines for Phased-Array Antennas . . . . .	61
C. Simple Delay-Line Applications Using Magnetostatic Waves . . . . .	67
D. Nonlinear Devices . . . . .	68
V. Linear Devices . . . . .	70
A. Wide-Band Devices—Delay Lines . . . . .	71
B. Resonators, Oscillators, and Filters . . . . .	81
VI. Nonlinear Devices . . . . .	92
A. Coupling to Half-Frequency Spin Waves . . . . .	92
B. High-Power Devices . . . . .	95
VII. Magneto-optic Interactions and Devices . . . . .	102
A. Scattering: General Considerations . . . . .	102
B. Applications of Magnetostatic Wave Interactions with Light . . . . .	111
VIII. Conclusions . . . . .	124
Acknowledgments . . . . .	125
Appendix A. Infinite Magnetic Medium . . . . .	125
Appendix B. Magnetic Anisotropy and Surface Waves . . . . .	129
Appendix C. Calculation from Surface Permeability . . . . .	132
Appendix D. Thickness Modes and Boundary Conditions . . . . .	134
References . . . . .	136

### Thin-Film Rare Earth-Transition Metal Alloys for Magneto-optic Recording

*Brent S. Krusor and G. A. N. Connell*

I.	Introduction . . . . .	143
II.	Materials Preparation and Properties . . . . .	147
	A. Preparation of Transition-Metal Rich Alloys . . . . .	148
	B. Structural Properties of Transition-Metal Rich Alloys . . . . .	155
	C. Oxidation and Aging Properties . . . . .	168
III.	Magnetic and Magneto-optic Properties . . . . .	174
	A. Magnetization, Magnetic Moment, and Exchange . . . . .	174
	B. Coercivity, Magnetic Anisotropy, and Domain Formation . . . . .	183
	C. Magneto-optic Properties . . . . .	190
IV.	Application to Magneto-optic Recording . . . . .	200
	A. Magneto-optic Medium Design . . . . .	201
	B. Recording Characteristics and Medium Noise . . . . .	209
V.	Summary . . . . .	213
	References . . . . .	214

### New Quantum Structures

*D. D. Coon and K. M. S. V. Bandara*

I.	Introduction and Background . . . . .	219
II.	Electronic States in Quantum Wells and Superlattices . . . . .	221
	A. Energy Levels in Quantum Wells and Superlattices . . . . .	222
	B. Corrections to Standard Models . . . . .	225
	C. Density of States Considerations . . . . .	227
	D. Wigner-Eisenbud Time Delay . . . . .	228
III.	Intersubband Transitions, Infrared Absorption, and Infrared Detection . . . . .	229
	A. Dark-Current Mechanisms . . . . .	236
	B. Noise, Detectivity, Responsivity, and Uniformity . . . . .	238
	C. Intraband vs. Interband Transitions . . . . .	238
	D. Exchange Interactions . . . . .	239
IV.	Resonant Tunneling and Device Applications . . . . .	244
	A. Application to Fast Logic and High-Frequency Oscillators . . . . .	245
	B. Intrinsic Bistability . . . . .	249
	C. Theoretical Approaches to Resonant Tunneling . . . . .	252
V.	Trends and Possibilities . . . . .	258
	Acknowledgments . . . . .	260
	References . . . . .	260

## Fourier Transform Infrared Analysis of Thin Films

*D. M. Back*

I. Introduction . . . . .	265
II. Theory of Infrared Absorption. . . . .	266
A. Source of Infrared Absorption . . . . .	266
B. Description of Infrared Absorption Bands . . . . .	267
C. Symmetry in Infrared Absorption . . . . .	268
D. Infrared Spectra of Amorphous Solids . . . . .	268
III. Instrumentation . . . . .	269
A. Fourier Transform Spectrometers . . . . .	269
B. FTIR vs. Dispersive Infrared Spectrometers . . . . .	271
C. Techniques of Infrared Analysis. . . . .	271
IV. Applications to Thin Film Analysis—Specific Systems . . . . .	277
A. Amorphous Silicon Films . . . . .	277
B. Miscellaneous $\alpha$ -Si:H Alloys . . . . .	283
C. Silicon Oxide Films . . . . .	287
D. Silicon Nitride Films . . . . .	291
E. Silicon Oxynitride Films . . . . .	295
F. Silicate Glass Films . . . . .	299
G. Aluminum Oxide Films . . . . .	303
H. Nickel Oxide Films . . . . .	304
I. Carbon Films . . . . .	305
J. Detection of Carbon Impurities . . . . .	308
V. Summary . . . . .	309
References . . . . .	309
<i>Author Index</i> . . . . .	313
<i>Subject Index</i> . . . . .	325
