PREFACE

FUNDAMENTALS OF MOMENTUM, HEAT, AND MASS TRANSFER

THIRD EDITION

JAMES R. WELTY

Professor and Head
Department of Mechanical Engineering
Oregon State University

CHARLES E. WICKS

Professor and Head
Department of Chemical Engineering
Oregon State University

ROBERT E. WILSON

Professor of Mechanical Engineering
Oregon State University

JOHN WILEY & SONS

New York • Chichester • Brisbane • Toronto • Singapore

CONTENTS

CHAPTER 1	CONCEPTS AND DEFINITIONS	
1.1	Fluids and the Continuum	1
1.2	Properties at a Point	2
1.3	Point-to-Point Variation of Properties in a Fluid	6
1.4	Units	9
CHAPTER 2	FLUID STATICS	
2.1	Pressure Variation in a Static Fluid	14
2.2	Uniform Rectilinear Acceleration	17
2.3	Forces on Submerged Surfaces	19
2.4	Buoyancy	23
2.5	Closure	24
CHAPTER 3	DESCRIPTION OF A FLUID IN MOTION	
3.1	Fundamental Physical Laws	30
3.2	Fluid Flow Fields: Lagrangian and Eulerian Representations	31
3.3	Steady and Unsteady Flows	31
3.4	Streamlines	33
3.5	Systems and Control Volumes	34
CHAPTER 4	CONSERVATION OF MASS: CONTROL VOLUME APPROACH	
4.1	Integral Relation	36

4.2	Specific Forms of the Integral Expression	
4.3	Closure	37
		42
CHAPTER 5	NEWTON'S SECOND LAW OF MOTION: CONTROL VOLUME APPROACH	
5.1	Integral Relation for Linear Momentum	46
5.2	Applications of the Integral Expression for Linear Momentum	50
5.3	Integral Relation for Moment of Momentum	57
5.4	Applications to Pumps and Turbines	59
5.5	Closure	64
CHAPTER 6	CONSERVATION OF ENERGY: CONTROL VOLUME APPROACH	
6.1	Integral Relation for the Conservation of Energy	73
6.2	Applications of the Integral Expression	80
6.3	The Bernoulli Equation	84
6.4	Closure	88
CHAPTER 7	SHEAR STRESS IN LAMINAR FLOW	
7.1	Newton's Viscosity Relation	96
7.2	Non-Newtonian Fluids	98
7.3	Viscosity	99
7.4	Shear Stress in Multidimensional Laminar Flows of a Newtonian Fluid	103
7.5	Closure	108
CHAPTER 8	ANALYSIS OF A DIFFERENTIAL FLUID ELEMENT IN LAMINAR FLOW	
8.1	Fully Developed Laminar Flow in a Circular Conduit of Constant Cross Section	112

8.2	Laminar Flow of a Newtonian Fluid Down an Inclined Plane Surface	115
8.3	Closure	117
CHAPTER 9	DIFFERENTIAL EQUATIONS OF FLUID FLOW	
9.1	The Differential Continuity Equation	120
9.2	Navier–Stokes Equations	123
9.3	Bernoulli’s Equation	132
9.4	Closure	134
CHAPTER 10	INVISCID FLUID FLOW	
10.1	Fluid Rotation at a Point	137
10.2	The Stream Function	139
10.3	Inviscid, Irrotational Flow about an Infinite Cylinder	140
10.4	Irrotational Flow, the Velocity Potential	143
10.5	Total Head in Irrotational Flow	145
10.6	Utilization of Potential Flow	146
10.7	Closure	147
CHAPTER 11	DIMENSIONAL ANALYSIS	
11.1	Dimensions	150
11.2	Geometric and Kinematic Similarity	151
11.3	Dimensional Analysis of the Navier– Stokes Equation	152
11.4	The Buckingham Method	154
11.5	Model Theory	156
11.6	Closure	158
CHAPTER 12	VISCOUS FLOW	
12.1	Reynolds’ Experiment	163
12.2	Drag	165
12.3	The Boundary-Layer Concept	169
12.4	The Boundary-Layer Equations	170
12.5	Blasius’ Solution for the Laminar Boundary Layer on a Flat Plate	171
12.6	Flow with a Pressure Gradient	176

12.7	von Kármán Momentum Integral Analysis	179
12.8	Closure	184
CHAPTER 13	THE EFFECT OF TURBULENCE ON MOMENTUM TRANSFER	
13.1	Description of Turbulence	187
13.2	Turbulent Shearing Stresses	189
13.3	The Mixing-Length Hypothesis	191
13.4	Velocity Distribution from the Mixing-Length Theory	192
13.5	The Universal Velocity Distribution	193
13.6	Further Empirical Relations for Turbulent Flow	196
13.7	The Turbulent Boundary Layer on a Flat Plate	196
13.8	Factors Affecting the Transition from Laminar to Turbulent Flow	199
13.9	Closure	199
CHAPTER 14	FLOW IN CLOSED CONDUITS	
14.1	Dimensional Analysis of Conduit Flow	202
14.2	Friction Factors for Fully Developed Laminar, Turbulent, and Transition Flow in Circular Conduits	204
14.3	Friction Factor and Head-Loss Determination for Pipe Flow	208
14.4	Pipe-Flow Analysis	212
14.5	Friction Factors for Flow in the Entrance to a Circular Conduit	215
14.6	Closure	219
CHAPTER 15	FUNDAMENTALS OF HEAT TRANSFER	
15.1	Conduction	223
15.2	Thermal Conductivity	224
15.3	Convection	231
15.4	Radiation	232

15.5	Combined Mechanisms of Heat Transfer	233
15.6	Closure	238
CHAPTER 16	DIFFERENTIAL EQUATIONS OF HEAT TRANSFER	
16.1	The General Differential Equations for Energy Transfer	243
16.2	Special Forms of the Differential Energy Equation	247
16.3	Commonly Encountered Boundary Conditions	248
16.4	Closure	249
CHAPTER 17	STEADY-STATE CONDUCTION	
17.1	One-Dimensional Conduction	252
17.2	One-Dimensional Conduction with Internal Generation of Energy	260
17.3	Heat Transfer from Extended Surfaces	264
17.4	Two- and Three-Dimensional Systems	272
17.5	Closure	286
CHAPTER 18	UNSTEADY-STATE CONDUCTION	
18.1	Analytical Solutions	296
18.2	Temperature-Time Charts for Simple Geometric Shapes	307
18.3	Numerical Methods for Transient Conduction Analysis	310
18.4	An Integral Method for One-Dimensional Unsteady Conduction	314
18.5	Closure	320
CHAPTER 19	CONVECTIVE HEAT TRANSFER	
19.1	Fundamental Considerations in Convective Heat Transfer	325
19.2	Significant Parameters in Convective Heat Transfer	326

19.3	Dimensional Analysis of Convective Energy Transfer	328
19.4	Exact Analysis of the Laminar Boundary Layer	331
19.5	Approximate Integral Analysis of the Thermal Boundary Layer	336
19.6	Energy- and Momentum-Transfer Analogies	338
19.7	Turbulent Flow Considerations	341
19.8	Closure	348

CHAPTER 20 CONVECTIVE HEAT-TRANSFER CORRELATIONS

20.1	Natural Convection	353
20.2	Forced Convection for Internal Flow	363
20.3	Forced Convection for External Flow	370
20.4	Closure	377

CHAPTER 21 BOILING AND CONDENSATION

21.1	Boiling	384
21.2	Condensation	390
21.3	Closure	397

CHAPTER 22 HEAT-TRANSFER EQUIPMENT

22.1	Types of Heat Exchangers	402
22.2	Single-Pass Heat-Exchanger Analysis: The Log-Mean Temperature Difference	404
22.3	Crossflow and Shell-and-Tube Heat-Exchanger Analysis	409
22.4	The Number-of-Transfer-Units (NTU) Method of Heat-Exchanger Analysis and Design	414
22.5	Additional Considerations in Heat-Exchanger Design	422
22.6	Closure	424

CHAPTER 23	RADIATION HEAT TRANSFER	
23.1	Nature of Radiation	428
23.2	Thermal Radiation	429
23.3	The Intensity of Radiation	431
23.4	Planck's Law of Radiation	434
23.5	Stefan-Boltzmann Law	437
23.6	Emissivity and Absorptivity of Solid Surfaces	437
23.7	Radiant Heat Transfer Between Black Bodies	444
23.8	Radiant Exchange in Black Enclosures	452
23.9	Radiant Exchange with Reradiating Surfaces Present	453
23.10	Radiant Heat Transfer Between Gray Surfaces	454
23.11	Radiation from Gases	459
23.12	The Radiation Heat-Transfer Coefficient	464
23.13	Closure	465
CHAPTER 24	FUNDAMENTALS OF MASS TRANSFER	
24.1	Molecular Mass Transfer	472
24.2	The Diffusion Coefficient	483
24.3	Convective Mass Transfer	500
24.4	Closure	501
CHAPTER 25	DIFFERENTIAL EQUATIONS OF MASS TRANSFER	
25.1	The Differential Equation for Mass Transfer	508
25.2	Special Forms of the Differential Mass-Transfer Equation	512
25.3	Commonly Encountered Boundary Conditions	514
25.4	Closure	517

CHAPTER 26	STEADY-STATE MOLECULAR DIFFUSION	
26.1	One-Dimensional Mass Transfer, Independent of Chemical Reaction	523
26.2	One-Dimensional Systems Associated with Chemical Reaction	536
26.3	Two- and Three-Dimensional Systems	545
26.4	Simultaneous Momentum, Heat, and Mass Transfer	551
26.5	Closure	560
CHAPTER 27	UNSTEADY-STATE MOLECULAR DIFFUSION	
27.1	Analytical Solutions	572
27.2	Concentration-Time Charts for Simple Geometric Shapes	576
27.3	Numerical Methods for Transient Mass Transfer Analysis	579
27.4	Closure	583
CHAPTER 28	CONVECTIVE MASS TRANSFER	
28.1	Fundamental Considerations in Convective Mass Transfer	589
28.2	Significant Parameters in Convective Mass Transfer	590
28.3	Dimensional Analysis of Convective Mass Transfer	592
28.4	Exact Analysis of the Laminar Concentration Boundary Layer	595
28.5	Approximate Analysis of the Concentration Boundary Layer	603
28.6	Mass, Energy, and Momentum Transfer Analogies	606
28.7	Models for Convective Mass-Transfer Coefficients	615
28.8	Closure	618

CHAPTER 29	INTERPHASE MASS TRANSFER	
29.1	Equilibrium	629
29.2	Two-Resistance Theory	633
29.3	Closure	641
CHAPTER 30	CONVECTIVE MASS-TRANSFER CORRELATIONS	
30.1	Mass Transfer to Plates, Spheres, and Cylinders	649
30.2	Mass Transfer Involving Turbulent Flow through Pipes	656
30.3	Mass Transfer in Wetted-Wall Columns	657
30.4	Mass Transfer in Packed and Fluidized Beds	659
30.5	Mass Transfer with Chemical Reaction	661
30.6	Capacity Coefficients for Industrial Towers	661
30.7	Closure	662
CHAPTER 31	MASS-TRANSFER EQUIPMENT	
31.1	Types of Mass-Transfer Equipment	669
31.2	Batch Mass-Transfer Tanks or Ponds	673
31.3	Mass Balances for Continuous Contact Towers: Operating Line Equations	675
31.4	Enthalpy Balances for Continuous Contact Towers	686
31.5	Mass-Transfer Capacity Coefficients	687
31.6	Continuous-Contact Equipment Analysis	688
31.7	Closure	703
NOMENCLATURE		714
APPENDIXES		
A	Transformations of the Operators ∇ and ∇^2 to Cylindrical Coordinates	722

B	Summary of Differential Vector Operations in Various Coordinate Systems	725
C	Symmetry of the Stress Tensor	728
D	The Viscous Contribution to the Normal Stress	730
E	The Navier–Stokes Equations for Constant ρ and μ in Cartesian, Cylindrical, and Spherical Coordinates	732
F	Charts for Solution of Unsteady Transport Problems	734
G	Properties of the Standard Atmosphere	747
H	Physical Properties of Solids	750
I	Physical Properties of Gases and Liquids	753
J	Mass-Transfer Diffusion Coefficients in Binary Systems	781
K	Lennard–Jones Constants	785
L	The Error Function	788
M	Standard Pipe Sizes	789
N	Standard Tubing Gages	790
