

CD-ROM includes
these books in
HTML format

Updated Edition
of the best-selling
NetWare Book!

The Most Complete Reference

- TCP/IP Connectivity
- Windows NT® Interoperability
- Novell® Web Server
- NetWare Security
- Migrating to 4.1
- NetWare Directory Services

Special Edition

USING NETWARE® 4.1

Second Edition

Contents

Introduction	1
How to Use This Book	1
What If You've Already Mastered Previous NetWare Versions?	2
How This Book Is Organized	2
What This Book Presumes You Know Already	3
Conventions Used in This Book	3
I Networking Basics	5
1 Exploring the Benefits of Networking	7
Expanding Your PC's Reach	8
Sharing Hardware	9
Sharing Disk Space	9
Sharing Printers	9
Sharing Communications Devices	10
Sharing Software	11
Sharing Software Packages	11
Sharing Data	12
Using Multiuser Software	13
Accessing Other Computer Systems and Networks	14
From Here...	15
2 Understanding the Components of a Network	17
Exploring the Hardware Components	18
Servers	18
Workstations	20
The Network Communication System	20
Examining the Software Component: The NetWare Operating System	23
From Here...	24
3 Introducing NetWare 4.1	25
The History of NetWare	26
Linking Your PC to the Network	26
Providing Security	28
Controlling Logins and Passwords	28
Controlling Trustee Security and Rights	29

Making the Network Easy to Use	31
Handling Network Printing	32
Novell Directory Services Navigating the Network with Elegance	33
Using the Directory Tree	34
Understanding the Directory Tree Structure	34
Naming Directory Objects	35
Managing Disk Space	36
Protecting against Hard Disk Failure	37
Hot Fix	37
Disk Mirroring	37
Server Mirroring	37
Looking inside a NetWare Server	38
Disk Sharing	38
Communications	39
NetWare Operating System Services	39
Server-Based Processing	39
From Here...	40
4 Comparing NetWare 4.1 with Previous NetWare Versions	43
The NetWare Family Tree	44
NetWare 2.x	44
NetWare 3.x	44
NetWare 4.1	45
Novell Directory Services: Network-Based versus Server-Based Security	46
Structure of the Novell Directory Services Database	47
Working with Novell Directory Services Object Names	48
Other Novell Directory Service Benefits	49
Storing the Novell Directory Services Database	50
Life after SYSCON: Changes to Commands and Utilities	52
Improved Disk Space Usage	54
Improved Server Memory Management	55
Time Management	55
Multilingual NetWare	56
Network Auditing	56
Special NetWare 4.1 Versions	56
From Here...	56
5 Choosing the Right Server Hardware	59
Selecting File Servers	60
The Central Processing Unit	60
The Hard Disk and Controller	63
Random-Access Memory	67
The Hardware Bus	70
Super Servers	71

Using Multiple Servers	71
From Here.....	73

6 Understanding Network Communications 75

Understanding the OSI Reference Model	76
Layer 1: Physical	78
Layer 2: Data Link	78
Layer 3: Network	78
Layer 4: Transport	79
Layer 5: Session	80
Layer 6: Presentation	80
Layer 7: Application	80
Moving Data throughout the Model	80
Using the Building Blocks of a Network	
Communications System	81
Choosing a Network Cable System	83
Some Considerations When Choosing a Cable	83
Understanding Cable Types	84
Understanding Different Network Types	91
Understanding Topologies	91
Understanding Network Architectures	93
Understanding High-Speed Network Architectures	107
Designing Your Network	115
Using Multiple Networks	115
Documenting Your Network	121
Understanding Network Industry Standards	122
ITU-T0	122
IEEE	122
ISO	122
Unofficial Standards	123
Understanding the IEEE 802 Standards	123
From Here.....	125

II Installing NetWare 4.1 127

7 Planning Your NetWare Directory Tree 129

Understanding the NetWare 4.1 Directory Tree	130
Naming the Directory Tree	130
Understanding the Parts of the Directory Tree	131
Understanding Directory Service Names	137
Understanding Contexts Directory Tree Locations	138
Using Properties and Values to Store Information	
about Objects	139
Controlling Access to the Directory Tree	139
Controlling How Your Directory Tree Is Stored	142
Reviewing Directory Tree Vocabulary	145
Guidelines for Designing Your Directory Tree	146

Looking at NetWare 4.1 Implementation Case Studies	149
A Small Law Firm	149
A Department at a Large University	149
A Multinational Foot-Care Products Conglomerate	151
Designing a Directory Tree	152
From Here...	152

8 Installing NetWare 4.1 **153**

Choosing between Simple and Custom Installation	154
Assembling Your Server's Hardware	155
Calculating Your Memory Requirements	156
Understanding How Network Adapters Talk to PCs	157
Preparing to Install NetWare 4.1	158
Making Special Preparations When Installing	
from CD-ROM	158
Choosing an Installation Medium	159
Deciding Whether to Boot Your Server from a Hard	
Disk or Floppy Disk	161
Creating a DOS Partition for Server Booting	161
Installing NetWare 4.1	162
Starting Installation from CD-ROM	162
Starting Installation from NetWare 4.1 Files	
Uploaded to a Server	162
Starting Installation from Floppy Disks	163
Using the INSTALL Utility	164
Activating Network Boards	170
Creating NetWare Volumes with INSTALL	179
Customizing Volume Definitions	181
Setting the Licensed User Count	186
Reestablishing Your Server Connection	186
Copying NetWare 4.1's Command and Utility Files	186
Installing Novell Directory Services	187
Setting Time Synchronization Information	188
Setting the Server's Directory Tree Context	192
Creating Files Used to Start the Server	195
Handling Server Memory above 16M in an	
ISA Bus Server	197
Exiting INSTALL and Moving to the Server	
Command Prompt	198
Stopping and Starting the Server	198
Installing a Server That Must Boot from a Floppy Disk	199
Creating Server Boot Disks	199
Booting the Server PC	200
Continuing Installation with the INSTALL.NLM	
Program	201

Placing Your Server in a Good Operating Environment	202
From Here...	202
9 Planning Your Upgrade to NetWare 4.1	203
What Changes When You Migrate to NetWare 4.1?	204
Strategies for Upgrading Servers	205
Strategies for Upgrading Workstations	206
Servers and Workstations: Which to Upgrade First?	207
Workstations First Pros and Cons	207
Servers First Pros and Cons	208
Strategies for Consolidating Servers	209
From Here...	213
10 Upgrading from Previous NetWare Versions	215
Initial Upgrade Considerations	216
Developing a NetWare 4.1 Upgrade Strategy	217
Choosing an Upgrade Method	217
Preparing Servers for Upgrading	220
The SUPERVISOR User and the Server Upgrade	222
Considerations When Converting Bindery Objects to NetWare 4.1 Objects	223
Special Issues When Multiple Servers Are Upgraded into the Same Context	225
Upgrading NetWare Workstation Software	225
Why Use VLMs or Client32?	226
Performing the Upgrade	227
Performing an INSTALL Upgrade	228
Preparing to Use the MIGRATE Utility	238
Performing a Server-to-Server Across-the-Wire Upgrade	239
Performing a Same-Server Upgrade	245
Using UIMPORT to Transfer Login Scripts	247
Using MIGPRINT to Transfer Remaining Printer Objects	248
From Here...	249
11 Activating Workstations	251
Installing Network Adapter Cards	253
Installing the NetWare 4.1 DOS Requester	254
Installing the DOS Requester from NetWare 4.1's CD-ROM	255
Making Installation Disks from NetWare 4.1's CD-ROM	256
Starting INSTALL from Disks	257
Starting INSTALL from CD-ROM	257
Starting INSTALL from a Server	257
Choosing the Directory for the Requester Files	257

Modifying Your CONFIG.SYS and AUTOEXEC.BAT Files	258
Installing Support for Windows 3.x	259
Installing Support for Workstation Backup	259
Choosing a Driver for Your Network Adapter	260
Installing the Requester Files	262
Using the NetWare DOS Requester	262
Loading the Requester Files	263
Knowing What to Do When the Requester Doesn't Load	264
Loading Support for Other Communication Protocols	267
Saving Memory When Loading the Requester	268
Using Advanced Options for Loading and Unloading Requester Modules	270
Using Advanced Requester Configuration Options	274
Using the Default NET.CFG File	274
Customizing NET.CFG	275
Logging In to the Network	297
Understanding the Information Required for Logging In	297
Running the LOGIN Command	298
Simplifying the Login Process	298
Logging In without Waiting for Prompts	299
Logging In to NetWare 2.x and 3.x Servers	299
Changing Your AUTOEXEC.BAT File	299
From Here...	300

III Building and Managing the Directory Tree 301

12 Getting Around in the NetWare Directory Tree 303

Reviewing the Directory Tree Building Blocks	304
Understanding Container Objects and Leaf Objects	304
Properties and Values Storing Information about Objects	304
Controlling Access to Objects and Properties	305
Storing the Directory Tree Replicas and Partitions	305
Logging In to the Directory Tree	305
Logging In to a Network with Multiple Directory Trees	308
Placing Login Information on the Command Line	309
Using Typed Names	309
Supplying the Context and Tree Name Automatically	309
Moving among Contexts in a Directory Tree with the CX Command	310
Using CX to Learn Your Current Context	310

Using CX to Switch to Another Context	310
Using CX to Display Directory Tree Information	312
Introducing NWADMIN and NETADMIN	314
Using NWADMIN	314
Using NETADMIN	325
From Here...	331
13 Creating and Managing Directory Tree Objects	333
Reviewing NetWare 4.1's Directory Tree Objects	334
Creating Container Objects	336
Creating Container Objects with NWADMIN	336
Creating Container Objects with NETADMIN	338
Managing User Objects	339
Preparing to Create User Objects	340
Creating Users	342
Working with a User's Account	346
Using Security Equivalence to Give Users Identical Access Rights	365
Working with Groups and Organizational Roles	367
Other NetWare 4.1 Utilities and Commands That Control User Accounts	371
Using Alias Objects to Make Objects More Accessible	371
Creating an Alias Object with NWADMIN	372
Creating an Alias Object with NETADMIN	372
From Here...	373
14 Managing Directory Tree Rights, Replicas, and Partitions	375
Controlling Access to Objects and Properties	376
Understanding Important Object and Property Rights Concepts	376
Choosing the Correct Combination of Rights	381
Using NWADMIN to Work with Object and Property Rights	382
Using NETADMIN to Work with Object and Property Rights	387
Working with Directory Tree Replicas and Partitions	390
Dividing Your Directory Tree into Partitions	391
Duplicating Partitions by Using Replicas	391
Understanding Automatically Created Partitions and Replicas	393
Understanding Replicas and Bindery Emulation	394
Cautions when Changing Partitions and Replicas	394
Maintaining Partitions and Replicas with NWADMIN	395
Using PARTMGR to Work with Partitions and Replicas	400

Viewing Replication Activity from the Server	
Console	403
Merging and Renaming Directory Trees	404
Planning for a Directory Tree Merger	404
Starting DSMERGE	405
Using DSMERGE to Check Server Availability	405
Confirming That Time Is Synchronized	406
Renaming a Directory Tree	406
Merging Two Trees	406
Using Bindery Emulation	407
Understanding the Rules for Setting Bindery	
Contexts	408
Setting a Server's Bindery Contexts	408
Understanding Bindery Emulation Limitations	409
Using Special Bindery Objects GUEST, EVERYONE, and SUPERVISOR	409
Using Bindery Synchronization	410
Resolving Duplicate Object Names	410
Loading and Configuring the NETSYNC4 NLM	411
Keeping Binderies Synchronized	413
Moving a NetWare 3.x Print Server to the Directory Tree	413
Monitoring and Managing Bindery	
Synchronization	414
Repairing Directory Tree Problems with DSREPAIR	414
From Here.....	416

IV Organizing Your Network 417

15 Organizing Information on a NetWare Server 419

Examining the Information Hierarchy	420
Disk Drives and Volumes	420
Directories and Subdirectories	421
Understanding NetWare's Directory Hierarchy	421
Working with NetWare's Hierarchy	422
Working with Multiple Servers	423
Using NetWare's Directory Tree Volume Object	
Name	424
Understanding Directory Map Objects	425
Using the MAP Command	425
Displaying a List of Assigned Drives	426
Assigning Drive Letters	426
Deleting Drive Letters	427
Mapping the Next Available Drive Letter	428
Using MAP Shortcuts	428

Mapping Search Drives	429
Mixing Local and Network Search Drives	431
Mapping a Root Directory	434
Eliminating Warning Prompts	435
Other Uses of MAP	435
Getting Help with the MAP Command	435
Using DOS and OS/2 Commands on the File-Server	
Disk.....	436
From Here...	437

16 Understanding Directory and File Rights 439

Examining NetWare's Directory and File Rights	441
Granting Rights to Individual Files	442
Combining Directory and File Rights	442
SUPERVISOR Rights to a Server Object— a Special Situation	443
Using the Correct Combination of Rights	443
Granting Trustee Rights to Various Objects	446
Controlling Trustee Rights through NetWare	
Commands	447
Controlling Rights with NWADMIN	448
Controlling Rights with the NETADMIN Utility	451
Adding or Deleting Rights to a Directory or File	456
Adding Rights to Groups of Users	457
Managing Group Rights with NWADMIN	458
Managing Group Rights with NETADMIN.....	458
Granting Rights to Container Objects	459
Adding Rights by Using Security Equivalence	459
Combining Rights	460
Working with Directory or File Inherited Rights	
Filters	461
Setting Inherited Rights Filters with NWADMIN	462
Setting Inherited Rights Filters with FILER	464
Understanding Effective Rights	466
Controlling Rights with the RIGHTS Command	467
Listing Your Effective Rights with the RIGHTS Command	468
Listing Trustee Rights	468
Using RIGHTS to Grant and Revoke Rights	469
Using RIGHTS to Remove a User or Group as a Trustee	470
Viewing and Setting the Inherited Rights Filter	471
Viewing the Source of Effective Rights	471
Applying RIGHTS Commands to Subdirectories	472
Specifying Continuous Screen Scrolling	472
Using Shortcuts to Add Users and Grant Rights	472
From Here...	472

17 Managing Files**475**

Understanding File Attributes	477
File Attributes Supported by NetWare	478
Directory Attributes	481
Rules for Using Attributes	482
Using FLAG to Control File Attributes	483
Using FLAG to View Attribute Settings	483
Viewing Information about Directories	485
Viewing Information for an Entire Directory Structure	485
Viewing the FLAG Display without Pausing	485
Using FLAG to Change Attribute Settings	486
Using FLAG to Change Directory Attributes	487
Setting Search Modes with FLAG	487
Getting Help with FLAG	488
Managing Files, Directories, and Volumes with NWADMIN	489
Choosing the Directory or File	489
Viewing File and Directory Identification Information	490
Viewing and Changing File and Directory Information	490
Working with Directory and File Trustees	493
Working with File and Directory Attributes	494
Salvaging Deleted Files	495
Renaming, Copying, Moving, and Deleting Files and Directories	497
Using FILER	500
Selecting the Current Directory	500
Setting FILER's Default Options	501
Controlling Which Files and Directories Are Listed	503
Managing Files and Directories	505
Working with Files	505
Working with Directories	510
Viewing Volume Information	514
Salvaging and Purging Deleted Files	515
Using FILER to Remove a File Permanently	518
Creating Directory Map Objects	518
Creating a Directory Map Object with NWADMIN	519
Creating a Directory Map Object with NETADMIN	520
Additional Commands for File and Directory Management	520
PURGE	521
NCOPY	521
NDIR	524

RENDIR	533
WSUPDATE	534
Configuring File Compression	537
From Here...	541

18 Putting NetWare Security to Work 543

Setting Up Personal Directories	544
Naming Each Directory	544
Designing the Right Directory Structure	544
Assigning Rights	545
Disk Space Restrictions	546
Setting Up a Shared-File Pool	546
Creating and Mapping to the Directory	547
Assigning Rights	548
Managing the Shared-File Pool	549
Using File Attributes	549
Setting Up a Shared Database	551
Typical Shared Database File Types	551
Access to Program Files	552
Access Rights to Data Files	553
File Attributes for Data Files	553
From Here...	556

19 Implementing Network Printing 557

Understanding the Network Printing Process	559
Step One: Redirecting Printer Output	559
Step Two: Waiting in a Print Queue	560
Step Three: Moving from the Queue to the Printer	561
Setting Up Network Printing	563
Planning Your Network Printing Environment	564
Using One Printer for Multiple Queues	564
Using Multiple Printers for One Queue	565
Defining Print Servers	565
Using NWADMIN to Set Up Network Printing	566
Creating and Configuring Print Queue Objects	567
Creating and Configuring Printer Objects	571
Creating Print Server Objects	578
Using PCONSOLE to Set Up Network Printing	583
Using PCONSOLE's Quick Setup Option	584
Setting Up Network Printing with PCONSOLE's Step-by-Step Approach	587
Creating and Configuring a Print Server	596
Using Third-Party Print Servers	600
Using Network Printer Adapters	601
Installing a Print Server Adapter	601
Activating Network Printers	602
Starting PSERVER at the NetWare 4.1 Server Console	602

Starting a Workstation-Based Network Printer	604
Starting a Windows 95 Network Printer	607
Starting a File-Server-Based Network Printer	608
From Here...	609

20 Using Network Printers **611**

Redirecting Print Requests to Network Printers	612
Using CAPTURE	614
Configuring Windows 3.1 for Network Printing	623
Connecting to Network Printers inside Windows 3.1	623
Printing Files with NPRINT	627
Using NPRINT	627
Using Parameters with NPRINT	627
Configuring Network Printing in Windows 95	628
Installing a Network Printer in Windows 95	628
Using Windows 95 Point and Print	630
Setting Network Printer Options in Windows 95	631
Managing Network Printing	633
Using NWADMIN to Manage Network Printing	633
Using Windows 95 to Manage Network Printing	642
Using PCONSOLE to Manage Network Printing	643
Controlling NetWare Print Servers	651
Managing Print Servers and Printers from the Print Server Console	652
Using the PSC Command to Manage Printing	652
From Here...	656

21 Creating Login Scripts **657**

Examining a Typical Script: The Default Login Script	659
Understanding the Three Types of Login Scripts	660
The Container Login Script	660
The Profile Login Script	661
The Personal Login Script	661
Inheriting a Personal Login Script from a User Template	661
Using the Three Login Script Types Effectively	661
Creating Login Scripts	663
Creating a Personal Login Script with NWADMIN	663
Creating Container Login Scripts	665
Creating Profiles and Profile Login Scripts	665
Creating a Login Script with the NETADMIN Utility	667
Creating Profiles and Profile Login Scripts with the NETADMIN Utility	669
Using Login Script Commands	671

Login Script Commands That Control Drive Mappings	675
Login Script Commands That Display Information	687
Commands That Control Login Script Flow	692
Commands That Execute External Applications	698
Special-Purpose Login Script Commands	701
Performing Mathematical Calculations in Login Scripts	709
Working with Login Command-Line Parameters	710
Using a Command That Makes Noise	711
Using the LOGIN Command to Control Login Script Execution	712
Managing Login Scripts	712
From Here...	713

22 Implementing NetWare Accounting 715

Establishing an Accounting Strategy	717
Installing NetWare Accounting on a Server	717
Installing Accounting by Using NWADMIN	717
Installing Accounting by Using NETADMIN	718
Setting Up Server Charge Rates	718
Understanding Disk Blocks	719
Defining Chargeable Items	719
Understanding Charge Rates	720
Assigning Charge Rates with NWADMIN	721
Assigning Charge Rates with NETADMIN	723
Establishing Account Balances and Credit Status	725
Setting Account Balances for Individual Users with NWADMIN	725
Setting Account Balances for Individual Users with NETADMIN	726
Setting Default Account Balances	727
Managing NetWare Accounting	727
Removing NetWare Accounting	728
From Here...	728

V Managing Your Network 729

23 Managing Your Network from a Workstation 731

Introducing NLIST	733
Building Basic Lists	733
Using Special NLIST Parameters to Build Advanced Lists	734
Building Lists According to Property Values	736
Combining NLIST's Parameters	738
Managing Server Availability and Information	739

Listing Server Information with NLIST	739
Displaying File Server Information with NWADMIN or NETADMIN	739
Managing Server Disk Space	742
Listing Volume Information with NLIST	742
Checking Disk-Space Usage on a Volume with NDIR	743
Checking Available Volume Space with FILER	744
Checking Available Volume Space with NWADMIN	744
Checking Available Volume Space with NETADMIN	744
Checking a User's Disk-Space Usage	745
Checking a User's Disk-Space Usage with NWADMIN	745
Checking a User's Disk-Space Usage with NETADMIN	746
Managing User Connections	746
Managing Your Personal Network Session	747
Viewing Your Network Identity with WHOAMI	747
Displaying Workstation Information with NVER	748
Synchronizing Your Workstation Time with the Network	748
Communicating with Other Workstations with SEND	749
Managing Your Personal Session with NETUSER	750
Installing and Using NetWare 4.1's Online Documentation	757
Placing Online Documentation Files on a Server	757
Adding the Viewer Icon to Windows Program Manager	758
Adding the Viewer Icon to Windows 95 Program Options	758
Using the Windows Viewer	759
From Here...	760

24 Using the Server Console to Manage Your Network 761

Running Console Commands and NLMs	762
Using Console Commands That Display Server Information	763
NAME	763
CONFIG	763
TRACK	764
DISPLAY SERVERS	766
DISPLAY NETWORKS	766
TIME	766

VERSION	767
SPEED	767
PROTOCOL	767
Controlling Access to the Server	768
DISABLE LOGIN	768
ENABLE LOGIN	768
CLEAR STATION	768
Sending Messages to Users	768
BROADCAST	768
SEND	769
Stopping the Server	769
DOWN	770
EXIT	770
RESTART SERVER	770
Controlling the Console Display with OFF and CLS	770
Controlling Disks	770
MOUNT and DISMOUNT	771
VOLUMES	771
LIST DEVICES	771
SCAN FOR NEW DEVICES	771
MIRROR STATUS	771
REMIRROR PARTITION	772
ABORT REMIRROR	772
Reconfiguring the Server	772
SET	772
RESET ROUTER	791
DISABLE TTS	792
ENABLE TTS	792
MEMORY	792
REGISTER MEMORY	792
ADD NAME SPACE	793
LOAD and UNLOAD	793
BIND and UNBIND	794
Working with NetWare 4.1 NetWare Loadable Modules	795
Loading an NLM	796
Unloading an NLM	796
Using the MONITOR NLM	796
Configuring Your Network with SERVMAN	812
Logging Console Messages with CONLOG	815
Editing Files with the EDIT NLM	816
Using NLMs Loaded by Other NLMs	816
Using NLMs Discussed in Other Chapters	816
Using NLMs That Control Data Migration	817
Using NLMs That Change the Default Server Console Language	817
Controlling Process Scheduling with SCHDELAY	817

Creating Server Batch Files That Run Console Commands and NLMs	818
Managing NLMs	819
MODULES	819
SEARCH	819
SECURE CONSOLE	820
REMOVE DOS	820
Using a Protected Memory Domain for NLM Testing	821
Preparing to Use DOMAIN	822
Using DOMAIN to Activate Memory Protection	822
Accessing the NetWare 4.1 Console from a Workstation with RCONSOLE	823
Preparing the Server to Respond to RCONSOLE	824
Preparing to Use RCONSOLE by Modem	826
Activating RCONSOLE from a Network- Connected PC	827
Using RCONSOLE	827
Using RCONSOLE Menu Options	828
Installing NetWare 4.1 System Files with RCONSOLE	830
Running Console Commands Automatically	830
Handling Special Server-Management Situations	831
From Here...	831

25 Managing and Tuning Server Communications 833

Choosing the Best Communication Hardware	834
Building a Basic Server Communication Configuration	835
Using LOAD to Activate Network Boards	835
LOAD and BIND Commands for Supporting Multiple Network Cards and Frame Types	839
Using INETCFG to Configure Server Communications	840
Converting Your Communication Configuration with INETCFG	840
Implementing IPX Filtering with FILTCFG	842
Other Useful Communication Utilities	844
Monitoring IPX with IPXPING and IPXCON	844
Using SPXCONFIG to Configure the SPX Protocol	845
Communication Protocols Discussed in Other Chapters	847
From Here...	847

26 Maintaining a Healthy Network 849

What Should a Network Management Plan Accomplish?	850
Understanding Server Performance	851
The Importance of File Caching	852
Maintaining File Server Performance with a 10-Point Check	853

Checking Server Cache Memory	854
Checking Server Processor Utilization	856
Checking Disk Activity Statistics	857
Viewing the Server's Connection Workload	857
Viewing Network Communications Statistics	857
Monitoring and Controlling Hard-Disk Space Use	858
Monitoring Available Disk Space	859
Limiting User Disk Space	859
Regaining Disk Space	859
Maintaining User and Workstation Information	860
Collecting User Information	860
Maintaining Other Information	861
Checking and Resetting Network Devices	861
Maintaining Network Databases and Other Software	862
Making Regular Backups	863
Choosing a Backup Device	863
Implementing a Backup Strategy	864
Backing Up Open Files	866
From Here...	866

27 Auditing Your Network 868

Overview of the Auditing Strategy	868
NDS Auditing Structure	869
Volume Auditing Structure	869
Preparing Your Network for Auditing	870
Preconfiguring the Auditing System	870
Enabling NDS Auditing	871
Enabling Volume Auditing	872
Configuring the Auditing System	873
Configuring NDS Auditing	873
Configuring Volume Auditing	877
An Example of Volume Auditing	879
Reporting from the Auditing System	881
Report Filters	882
Report Generation	882
Viewing Audit Files	883
Managing the Auditing System	883
Automatic Audit File Handling	884
Manual Audit File Handling	885
From Here...	886

28 Implementing and Using NetWare SMP 887

Understanding Multiprocessing	888
How Servers Share Processors	889
Understanding Symmetric Multiprocessing	889
Understanding Process Management	890
Understanding Memory Sharing	891
How NetWare SMP Works	891

NetWare SMP Overview	891
NetWare SMP Scheduling Technique	892
File Server Hardware Requirements	893
Get a Bigger Bang for Your SMP Buck	894
Backward-Compatibility	894
Utilities Used to Install and Monitor NetWare SMP	894
Exploring the Benefits of Multiprocessing	895
When Multiprocessing Is the Most Useful	896
When Multiprocessing Probably Doesn't Help	897
Where to Go from Here	897
From Here...	898

VI Enhancing Your Network 899

29 Building Menus 901

Designing Your Menus	903
Preparing to Use NetWare 4.1's Menu Builder	904
Creating and Running Your First Menu	905
Creating a Menu Script File	905
Compiling a Script	906
Running a Script	906
Examining Script File Structure	907
Restrictions on Script File Line Lengths	909
Creating an Exit Option	909
Creating a Logout Option	909
Providing a DOS Prompt While Running a Menu	909
Customizing Menu Option Execution	909
Creating Submenus	910
Loading Submenus from an External File	912
Customizing Menu Option Hot Keys	912
Prompting for User Input	913
Menu Window Positions and Sizes	916
Converting Menu Scripts from Previous NetWare Versions	917
Changing Menu Colors	918
Running COLORPAL	918
Accommodating PCs with Unusual Displays	918
From Here...	919

30 Sharing Software 921

The Benefits of Network-Based Software	921
Installation Strategies for Network Software	922
Choosing Servers	922
Choosing a Directory Structure	925
Installing Your Program	926
Controlling Access	926
Choosing NetWare Rights	926

Granting Rights to Groups and Container Objects	927
Setting the Program File Attributes	927
How to Make Shared Programs Easy to Use	928
Starting Shared DOS Applications with Batch Files	928
Deciding Where to Store Batch Files	930
Starting Shared Programs from a Menu	930
Special Issues When Sharing Windows Programs	930
Mapping Drives to Volumes That Store Windows Programs	931
Managing Mapped Drive Letters When Using Windows and DOS Programs	931
Using the NetWare Application Manager to Deliver Applications	932
Installing the NetWare Application Manager	932
Running NAL at Each Workstation	934
Creating and Defining Application Objects	934
Using the NetWare Application Launcher	938
From Here...	940

31 Sharing CD-ROMs 941

Preparing to Activate NetWare 4.1's CD-ROM Sharing	942
Choosing the Right CD-ROM Hardware	942
Preparing the Software	942
Installing the Hardware	944
Loading Required Drivers	946
Using a Shared CD-ROM	948
Loading CDROM NLM	948
Listing Information about CD-ROMs and CD-ROM Drives	949
Preparing to Grant Access to a CD-ROM Volume	949
Mounting a CD-ROM Volume	950
Using a Mounted CD-ROM Volume	951
Controlling CD-ROM Volume Mounting Time	951
Making CD-ROM Directories Inaccessible	951
Mounting Macintosh or NFS CD-ROMs	952
Changing CD-ROM Volumes	952
Listing the Root Directory of a CD-ROM	952
Dismounting a CD-ROM Volume	953
Removing Index Files	953
Automating the Mounting of CD-ROMs	953
From Here...	954

32 Using Message-Handling Services 955

Understanding Novell's MHS	956
Understanding How MHS Works	957
Standard Message Format	958
Transport Protocols	960
Using MHS Services with the Directory Tree	961

Sending Messages to Directory Tree Objects	962
Using the Directory Tree to Store Foreign Mail Names ...	962
Using MHS Addresses and Directory Tree Names	962
Installing and Configuring MHS Services	963
Installing MHS Services	963
Starting the Messaging Server	964
Adding Mailboxes for Users and Other Directory Tree Objects	964
Creating Message Routing Groups	966
Creating Distribution Lists	968
Using FirstMail	969
Using FirstMail for Windows	969
Using FirstMail for DOS	971
Monitoring MHS Services with MHSCON	971
From Here...	973

33 Implementing Communications Servers and Fax Servers **975**

Understanding Third-Party Enhancements	976
Performing a Needs Analysis	976
Installing a Fax Server	978
Understanding Fax APIs	978
Understanding Fax Server Terminology	979
Selecting a Fax Server	980
Understanding and Installing Asynchronous Servers	985
Understanding Network Communications APIs	986
Understanding General Communications Terminology	986
Understanding Dial-In and Dial-Out Services and Their Respective Considerations	988
Selecting a Communications Server	992
From Here...	994

VII Networking with Windows 95, Windows 3.1x, Windows NT, and OS/2 **997**

34 Using Windows 95 with NetWare 999	
Forming Your Windows 95 Networking Strategy	1000
Choosing Protected Mode or Real Mode Network Software	1000
Choosing the Best NetWare Client	1002
Choosing whether to Run Local or Shared Copies of Windows 95	1004
Deciding whether to Install Windows 95 from a Server	1005

Deciding whether to Use System Policies and User Profiles 1005

Activating a Network Connection on a Windows 95 PC 1006

Adding Networking to a Windows 95 PC 1006

Installing Windows 95 on a PC That Is Already Networked 1013

Using Windows 95 to Access Network Resources 1015

Logging In from a Windows 95 PC 1015

Managing Automatic Drive Mappings 1017

Working with Server and Directory Tree Connections While Browsing 1022

Working with Network Printers 1023

Installing and Using Novell's Client32 for Windows 95 1024

Locating and Preparing the Installation Files for Client32 1024

Installing Client32 1025

Directories Created by Client32 1025

Logging In for the First Time with Client32 1026

Customizing Client32 1026

Logging In with Client32 1037

Login Scripts and Client32 1038

Installing and Using Microsoft's Service for NDS 1039

Downloading and Preparing the Service for NDS's Files 1040

Installing Microsoft's Service for NDS 1040

Logging In with Microsoft's Service for NDS 1041

Customizing Microsoft's Service for NDS 1042

Configuring a Novell File Server for Optimum Windows 95 Support 1043

Configuring Servers to Support Long File Names 1043

Placing Windows 95's Installation Files on the Server 1043

Implementing User Profiles and System Policies 1048

Activating User Profiles 1048

Using System Policies 1051

From Here... 1058

35 Using Windows 3.1x with NetWare 1059

Combining Windows 3.1x and NetWare 1060

Installing Windows 3.1x on a Networked PC 1060

Connecting a Windows 3.1x PC to Your Network 1063

Running Windows 3.1x from a File Server 1064

Placing the Program Files on a Server Volume 1064

Setting File Attributes and Granting Users Access 1065

Creating a Personal Windows Configuration 1065

Starting Windows from the Network 1065

Understanding the Limitations When Using Windows 3.1x	1066
Using NWUSER	1066
Starting and Using NWUSER	1066
Managing Shared Printer Connections	1067
Mapping Drive Letters to Server Volumes and Directories	1068
Managing Network Connections	1069
Sending Messages	1070
Customizing User-Defined Buttons	1070
Configuring NWUSER Options	1071
Getting Help and Exiting NWUSER	1072
Using Windows 3.1x's Built-In Network Features	1072
Managing NetWare Settings with Control Panel	1073
Managing Printer Connections	1073
Assigning Drive Letters	1074
Viewing and Working with NetWare File Information	1075
Getting an Inside Look at NetWare's Windows 3.1x Support Files	1075
From Here...	1076

36 Using Windows NT with NetWare 1079

Understanding the Windows NT Client	1081
Benefits of Using Windows NT	1082
System Requirements	1084
Connecting Windows NT to a NetWare Network	1085
Installing Network Support on a Windows NT Workstation	1086
Installing the Microsoft Client Service for NetWare	1088
Installing the Novell NetWare Client Service	1091
Installing the NetWare Administrator for Windows NT	1093
Accessing NetWare Services	1093
File Service	1094
Print Service	1100
Logon Scripts	1101
Using Password Expiration Dates	1103
Using NetWare Utilities	1103
Accessing Novell Directory Services	1103
Configuring the Microsoft Client Service for NetWare	1104
Configuring the Novell NetWare Client Service for Windows NT	1105
Monitoring the Client Service for NetWare	1106
Using Windows NT 4.0 as a NetWare Client	1109
Getting Additional Help	1111
Technical Support	1113
Windows NT Resource Kit	1113
Microsoft TechNet CD	1113
From Here...	1114

37 Using NetWare with OS/2 1115

Understanding OS/2's Many Uses with NetWare 4.1 1116
 Using the NetWare Client for OS/2 1116
 Activating OS/2 Workstations 1117
 Creating the NetWare Client for OS/2 Installation
 Disks 1118
 Installing NetWare Client for OS/2 1119
 Creating OS/2 Login Scripts for the Network..... 1125
 From Here... 1126

VIII Combining NetWare, the Internet, and TCP/IP 1127

38 Understanding TCP/IP and the Internet 1129

What Is TCP/IP? 1130
 A (Very) Brief History of TCP/IP 1133
 TCP/IP's Layered Architecture 1133
 Encapsulation 1136
 TCP/IP, Operating Systems, and Networks 1137
 IP Addresses 1139
 The Domain Name System 1141
 Protocols 1142
 Gateway Protocols 1142
 TCP and UDP 1143
 TCP Ports and Sockets 1144
 Internet Protocol 1145
 Breaking Up Long Messages 1145
 Internet Control Message Protocol (ICMP) 1146
 Simple Mail Transfer Protocol 1146
 Network File System (NFS) 1147
 TCP/IP Applications 1147
 Telnet 1147
 File Transfer Protocol (FTP) 1148
 Trivial File Transfer Protocol (TFTP) 1149
 Berkeley Utilities 1149
 From Here... 1150

39 Combining NetWare and TCP/IP 1151

Implementing TCP/IP 1152
 Replacing NetWare's IPX with IP 1152
 Workstation Support for TCP/IP 1153
 Using TCP/IP Gateways 1154
 Tunneling IPX within IP 1154
 SNMP Support 1155
 NetWare Configuration Files 1156
 Workstation-Based IP Support 1157
 Server-Based IP Support 1159

Loading TCPIP	1160
Binding to a Network Board Driver	1160
Frame Types	1161
Verifying the LOAD and BIND Process	1162
Configuring TCP/IP with INETCFG	1162
IP Tunneling	1167
Loading IP Tunneling	1167
Verifying the Process	1167
From Here...	1168
40 Using the NetWare Web Server	1169
Understanding the World Wide Web	1169
Defining the Internet and Intranets	1170
Overview of the Internet	1170
Overview of Intranets	1171
Where Does Novell's Web Server Fit In?	1172
NetWare Web Server Features and Functions	1173
Installing Novell's Web Server	1174
Installing the Web Server NLM	1174
Installing and Configuring TCP/IP	1174
Configuring Your NetWare Server as a DNS Server	1178
Hardware and Software Requirements	1184
Installing Your NetWare Web Server NLM Package	1184
Server Configuration	1185
Beginning the Installation	1185
Maintaining Novell's Web Server NLM	1189
Using the NetWare Web Server Administration Utility	1190
Setting Up Initial Configuration	1190
Creating Your First Web Page	1196
Using HTML Tools	1196
Basic HTML Editing Tools	1196
Specialized HTML Editors	1197
Understanding HTML Language Basics	1197
Understanding HTML Documents	1198
Other Resources for NetWare Web Server Information	1200
From Here...	1200
41 Using NetWare/IP and LAN WorkPlace for DOS	1203
Using NetWare/IP	1204
Understanding NetWare/IP?	1205
Understanding NetWare/IP's Basic Concepts	1205
Planning Your Implementation	1208
Using LAN WorkPlace with NetWare 4.1	1242
Comparing LAN WorkPlace and LAN WorkGroup	1244
Understanding LAN WorkPlace	1244
Installing and Configuring LAN WorkPlace	1245
From Here...	1253

IX Networking the Macintosh 1255

42 Using NetWare with the Macintosh 1257

Understanding Macintosh Networks	1258
Establishing a Communications Link	1258
Sharing Macintosh Files	1259
Printing	1259
Connecting Multiple AppleTalk Networks	1260
Understanding NetWare for Macintosh Capabilities	1261
Preparing to Implement NetWare for Macintosh	1262
Configuring Your Macintosh Network	1262
Rules for Assigning AppleTalk Network Numbers and Zone Names	1263
Connecting a NetWare Server to an Existing Macintosh Network	1265
Deciding Whether to Use NetWare Queues for Macintosh Printing	1265
Installing NetWare for Macintosh	1267
Preparing for Installation	1267
Installing and Configuring the Network Adapters That Run AppleTalk	1268
Installing NetWare for Macintosh's Files with INSTALL	1268
Installing the Macintosh Name Space on Server Volumes	1269
Choosing to Load Macintosh File and Print Services from AUTOEXEC.NCF	1270
Choosing to Install Macintosh Client Support Files	1270
Configuring NetWare for Macintosh	1271
Activating NetWare for Macintosh	1293
Understanding NetWare for Macintosh Configuration and Monitoring NLMs	1293
Removing NetWare for Macintosh	1294
From Here...	1294

43 Activating Macintosh Workstations 1295

Choosing a Login Method	1296
Logging In to a NetWare Server Using AppleShare	1296
Preparing Macs and Servers for Logging In to the Directory Tree	1298
Preparing to Install the MacNDS Client	1298
Installing the MacNDS Client	1298
Configuring MacIPX	1299
Logging In to Novell Directory Services	1302
Viewing Your NDS Login Information	1303
Changing Your Password	1303
Logging Out of the Directory Tree	1304

Logging In to NDS Using the Chooser	1304
Connecting to a Server and Mounting a Volume after You're Already Logged In	1305
Setting Default Login Information	1305
Setting MacIPX Parameters	1306
Using a NetWare Print Spooler/Queue	1307
Working with Folder Rights and Attributes	1308
Using the File Menu's Sharing Option	1308
Understanding Folder Icons	1309
Understanding In-Folder Icons	1309
Turning On File Attributes	1309
Using Aliases to Simplify Volume, Directory, and File Access	1310
From Here...	1310

Appendixes **1311**

A NetWare 4.1 Commands, Rights, and Attribute Summary **1313**

NetWare 4.1 Commands and Utilities	1313
File and Directory Attributes	1320
NetWare 4.1 File Attributes	1320
NetWare 4.1 Directory Attributes	1321
NetWare Directory Services Object and Property Rights	1321
Object Rights	1322
Property Rights	1322

B NetWare 4.1 Objects and Properties **1323**

NetWare 4.1 Objects	1323
Commonly Used NetWare 4.1 Properties	1324

C Important NetWare Files and Directories **1329**

D Special Keys for NetWare Utilities and NLMs **1331**

Special Keys for NetWare Windows Utilities	1331
Special Keys for DOS Utilities and NLMs	1332

E Creating and Managing User Objects with UIMPORT **1333**

Constructing the Data File	1334
Importing Information into Multivalued Properties	1335
Importing Login Scripts	1335
Updating an Existing User Object	1335
Deleting Property Values for an Existing User	1336
Deleting a User Object	1336

Constructing the Control File	1336
Options for the IMPORT CONTROL Section	1336
Options for the FIELDS Section	1339
Running UIMPORT	1342

F Decimal to Hexadecimal Conversion 1343

Hexadecimal Equivalents of Common Memory	
Amounts	1343
Using Register Memory	1345
Decimal/Hexadecimal/Binary Equivalences	1346

G Country Codes for Directory Tree Country Objects 1355

H Overview of *Upgrading and Repairing Networks* 1359

About <i>Upgrading and Repairing Networks</i>	1359
Understanding Network Background	1360
Overview of Network Systems and Services	1360
The OSI Model: Bringing Order to Chaos	1361
Upgrading to a WAN	1361
The Server Platform	1361
The Workstation Platform	1362
Major Network Types	1362
Novell NetWare	1362
Microsoft Windows NT	1362
UNIX Operating Systems	1362
Network Client Software	1363
Network Client Software for 32-bit Windows	1363
Hubs: Dumb, Smart, Switching, and Otherwise	1363
Repeaters and Bridges	1363
Routers	1364
Linking to Minis and Mainframes	1364
Backup Technology: Programs and Data	1364
Backup Technologies: Uninterruptable Power	
Supplies	1364
Antivirus Technology	1364
Tools for Restricting Access	1365
Disaster Planning for Networks	1365
Network Preventive Maintenance	1365
Adding Network Printing	1365
Adding Network CD-ROMs	1365
Adding Network Modems	1365
Adding Internet Access	1366
Adding Remote Network Access (Telecommuting)	1366
Adding Wireless Networking	1366
Network Management and SNMP	1366
Locating the Problem: Server versus Workstation	
versus Links	1366

Repairing Common Types of Problems 1366
NetWare Patches 1366
Information Sources 1367
RAID 1367
Software License Metering 1367
Summary 1367

Index

1369
