Third Edition

Springer

Contents

Preface		v
Chapter 1	Introduction to Programming in Fortran 90	1
1.1	Programs that Calculate and Print	1
1.2	Intrinsic Data Types	4
1.3	Variables and Input	12
1.4	The Form of a Fortran Program	24
1.5	Some Intrinsic Functions	27
1.6	Expressions and Assignment	30
1.7	Introduction to Formatting	36
1.8	Case Studies: Quadratic Formula	42
1.9	Case Study: Debugging Pendulum Calculations	50
Chapter 2	Control Constructs	57
2.1	Statement Blocks	57
2.2	Construct Names	58
2.3	The if Construct and if Statement	58
2.4	The case Construct	73
2.5	The do Construct	77
2.6	The stop Statement	91

Chapter 3	Procedures	93
3.1	Subroutines	94
3.2	Functions	101
3.3	Argument Passing	104
3.4	Scope	112
3.5	The save Attribute	113
3.6	Case Study: Numerical Integration	114
3.7	Case Study: Calculating Probabilities	116
3.8	Recursion	118
3.9	The return Statement	127
Chapter 4	Arrays	129
4.1	Declaring and Using Arrays in Fortran	130
4.2	Searching a List	144
4.3	Sorting	152
4.4	Selecting	158
4.5	Case Study: Solving Linear Equations	161
4.6	Case Study: Calculating Probabilities	167
Chapter 5	Character Data	171
5.1	Use of Character Data in Fortran Programs	171
5.2	Text Analysis	189
5.3	Case Study: Expression Evaluation	205
Chapter 6	Structures and Derived Types	213
6.1	Structures	213
6.2	Derived Types	216
6.3	Declaring and Using Structures	217
Chapter 7	Modules	221
7.1	Writing and Using Modules	222
7.2	Case Study: Adaptive Numerical Integration	226
7.3	Extending and Defining Operations	232
7.4	Computing with Big Integers	241
Chapter 8	Pointer Variables	257
8.1	The Use of Pointers in Fortran	258
8.2	Linked Lists	265
8.3	Trees	278
8.4	Case Study: Finding the Median	285
8.5	Arrays of Pointers	291

Chapter 9	Input and Output	301
9.1	Records	302
9.2	Files	305
9.3	Data Transfer Statements	314
9.4	The open Statement	325
9.5	The close Statement	329
9.6	The inquire Statement	329
9.7	File Positioning Statements	334
9.8	Formatting	337
Chapter 10	Redundant Features	355
10.1	Going Against the Flow	356
10.2	Data	360
10.3	Input/Output	366
10.4	Procedures	371
10.5	Miscellaneous	374
Appendix A	Intrinsic Procedures	377
A.1	Intrinsic Functions	377
A.2	Elemental Intrinsic Procedures	378
A.3	Positional Arguments or Argument Keywords	378
A.4	Argument Presence Inquiry Function	379
A.5	Numeric, Mathematical, Character, and Logical Procedures	379
A.6	Numeric Manipulation and Inquiry Functions	381
A.7	Bit Manipulation and Inquiry Procedures	383
A.8	Transfer Function	384
A.9	Array Intrinsic Functions	385
A.10	Pointer Association Status Inquiry Function	388
A.11	Intrinsic Subroutines	388
A.12	Specific Names for Intrinsic Functions	389
Appendix B	Syntax Rules	393
B.1	Notation Used in the Syntax Rules	393
B.2	Syntax Rules and Constraints	396
B.3	Cross References	419
Index		431
