SCHAUM'S OUTLINE SERIES

THEORY AND PROBLEMS OF

COLLEGE CHEMISTRY

6/ed

JEROME L. ROSENBERG

**INCLUDING 611 SOLVED PROBLEMS
and 735 supplementary problems**

SCHAUM'S OUTLINE SERIES IN SCIENCE

McGRAW-HILL BOOK COMPANY

Contents

		Page	
Chapter	1	QUANTITIES AND UNITS	1
		Introduction. Systems of measurement. International system of units. Temperature. Other temperature scales.	
Chapter	2	ATOMIC WEIGHTS, MOLECULAR WEIGHTS, AND MOLES	14
		Atoms. Nuclei. Relative atomic weights. Mole. Symbols, formulas, formula weights. Molecular formulas, molecular weights.	
Chapter	3	FORMULAS AND COMPOSITION CALCULATIONS	23
		Empirical formula from composition. Composition from formula. Nonstoichiometric factors. Molecular mass numbers and chemical formulas.	
Chapter	4	CALCULATIONS FROM CHEMICAL EQUATIONS	39
		Introduction. Molecular relations from equations. Mass relations from equations.	
Chapter	5	MEASUREMENT OF GASES	51
		Gas volumes. Pressure. Standard atmospheric pressure. Standard conditions (S.T.P.). Gas laws. Boyle's law. Charles' law. Gay-Lussac's law. Combined gas law. Density of an ideal gas. Dalton's law of partial pressures. Collecting gases over a liquid. Deviations from ideal behavior.	
Chapter	6	KINETIC THEORY AND MOLECULAR WEIGHTS OF GASES	60
		Avogadro's hypothesis. Molar volume. Ideal gas law. Gas volume relations from equations. Basic assumptions of the kinetic theory of gases. Predictions of the kinetic theory.	
Chapter	7	THERMOCHEMISTRY	74
		Heat. Heat capacity. Law of Dulong and Petit. Calorimetry. Energy and enthalpy. Enthalpy changes for various processes. Rules of thermochemistry.	
Chapter	8	ATOMIC STRUCTURE AND THE PERIODIC LAW	86
		Absorption and emission of light. Interaction of light with matter. Particles and waves. The Pauli principle and the periodic law. Atomic radii. Ionization potentials. Electron affinity. Magnetic properties.	
Chapter	9	CHEMICAL BONDING AND MOLECULAR STRUCTURE	100
		Ionic valence. Covalence. Valence-bond representation. Molecular-orbital representation. Shapes of molecules. Coordinate covalence and coordination compounds. Isomerism.	
Chapter	10	THE SOLID STATE	133
		Crystals. Crystal forces.	
Chapter	11	OXIDATION-REDUCTION	144
		Oxidation-reduction reactions. Oxidation state. Ionic notation for equations. Balancing oxidation-reduction equations.	

CONTENTS

Chapter 12	CONCENTRATIONS OF SOLUTIONS	157
	Solute and solvent. Concentrations expressed in physical units. Concentrations expressed in chemical units. Comparison of the concentration scales. Summary of concentration units. Dilution problems.	
<hr/>		
Chapter 13	REACTIONS INVOLVING STANDARD SOLUTIONS	170
	Advantages of volumetric standard solutions.	
<hr/>		
Chapter 14	PROPERTIES OF SOLUTIONS	177
	Introduction. Vapor pressure. Freezing-point lowering, ΔT_f . Boiling-point elevation, ΔT_b . Osmotic pressure. Deviations from laws of dilute solutions. Solutions of gases in liquids. Law of distribution.	
<hr/>		
Chapter 15	THERMODYNAMICS AND CHEMICAL EQUILIBRIUM	188
	The first law. The second law. The third law. Standard states and reference tables. Chemical equilibrium. The equilibrium constant. Le Chatelier's principle.	
<hr/>		
Chapter 16	ACIDS AND BASES	209
	Acids and bases. Ionization of water. Hydrolysis. Buffer solutions and indicators. Weak polyprotic (polybasic) acids. Apparent equilibrium constants. Titration.	
<hr/>		
Chapter 17	EQUILIBRIA OF COORDINATION COMPLEXES; SOLUBILITY PRODUCT AND PRECIPITATION	240
	Coordination complexes. Solubility product. Applications of solubility product to precipitation.	
<hr/>		
Chapter 18	ELECTROCHEMISTRY	254
	Electrical units. Faraday's laws of electrolysis. Galvanic cells. Standard half-cell potentials. Combination of couples. Free energy, nonstandard potentials, and the direction of oxidation-reduction reactions. Use of E° -values.	
<hr/>		
Chapter 19	RATES OF REACTIONS	272
	Rate constants and the order of reactions. First-order reactions. Energy of activation. Mechanism of reactions.	
<hr/>		
Chapter 20	NUCLEAR CHEMISTRY AND RADIOCHEMISTRY	285
	Fundamental particles. Binding energies. Nuclear equations. Radiochemistry.	
<hr/>		
Appendix A	EXPONENTS	297
Appendix B	SIGNIFICANT FIGURES	299
Appendix C	LOGARITHMS	301
Appendix D	FOUR-PLACE LOGARITHMS	306
<hr/>		
INDEX		310
TABLE OF ATOMIC WEIGHTS		314
