

Wiley Series in Telecommunications and Signal Processing
John G. Proakis, Series Editor

Digital Communication Receivers

Synchronization,
Channel Estimation,
and Signal Processing

Heinrich Meyr • Marc Moeneclaey
Stefan A. Fechtel

Contents

Preface	xix
Acknowledgments	xxiii
About the Authors	xxv
PART A Introduction	
Introduction and Preview	1
PART B Basic Material	
Chapter 1 Basic Material	9
1.1 Stationary and Cyclostationary Processes	9
1.1.1 Continuous-Time Stationary Processes	9
1.1.2 Continuous-Time Cyclostationary Processes	12
1.1.3 Discrete-Time Stationary Processes	16
1.1.4 Examples	18
1.1.5 Main Points	24
Bibliography	25
1.2 Complex Envelope Representation	25
1.2.1 Complex Envelope of Deterministic Signals	26
1.2.2 Complex Envelope of Random Processes	35
1.2.3 Example	43
1.2.4 Main Points	45
Bibliography	46
1.3 Band-Limited Signals	46
1.3.1 Correlation Function and Power Spectrum	46
1.3.2 Sampling Theorem	48
1.3.3 Sampling of Bandpass Signals	48
1.3.4 Main Points	53
Bibliography	54
1.4 Fundamentals of Estimation Theory	54
1.4.1 Bounds on Estimation Errors	54
Bibliography	58

PART C Baseband Communications

Chapter 2	Baseband Communications	61
2.1	Introduction to Digital Baseband Communication	61
2.1.1	The Baseband PAM Communication System	61
2.1.2	The Nyquist Criterion for Eliminating ISI	65
2.1.3	Line Coding	70
2.1.4	Main Points	72
2.1.5	Bibliographical Notes	73
	Bibliography	78
2.2	Clock Synchronizers	79
2.2.1	Introduction	79
2.2.2	Categorization of Clock Synchronizers	80
2.2.3	Examples	82
2.2.4	Disturbance in Clock Synchronizers	88
2.3	Error-Tracking Synchronizers	89
2.3.1	The General Structure of Error-Tracking Synchronizers	89
2.3.2	Open-Loop Statistics of the Timing Error Detector Output Signal	91
2.3.3	The Equivalent Model and Its Implications	94
2.3.4	The Linearized Equivalent Model	97
2.3.5	The Linearized Timing Error Variance	99
2.3.6	Discrete-Time Hybrid Synchronizers	104
2.3.7	Simulation of Error-Tracking Synchronizers	108
2.3.8	Main Points	111
2.3.9	Bibliographical Notes	112
2.3.10	Appendix	113
	Bibliography	117
2.4	Spectral Line Generating Clock Synchronizers	118
2.4.1	Nonlinearity Followed by a PLL with Multiplying Timing Error Detector	118
2.4.2	Nonlinearity Followed by Narrowband Bandpass Filter	128
2.4.3	Phase-Locked Loops versus Bandpass Filters	133
2.4.4	Jitter Accumulation in a Repeater Chain	138
2.4.5	Simulation of Spectral Line Generating Synchronizers	142
2.4.6	Main Points	144
2.4.7	Bibliographical Notes	146
	Bibliography	147

2.5	Examples	148
2.5.1	Example 1: The Squaring Synchronizer	148
2.5.2	Example 2: The Synchronizer with Zero-Crossing Timing Error Detector (ZCTED)	175
2.5.3	Example 3: The Mueller and Müller Synchronizer	196
	Bibliography	206

PART D Passband Communication over Time Invariant Channels

Chapter 3	Passband Transmission	211
3.1	Transmission Methods	211
3.2	Channel and Transceiver Models	212
3.2.1	Linear Channel Model	212
3.2.2	Nonlinear Channel Model	217
3.3	Channel Capacity of Multilevel/Phase Signals	218
	Bibliography	224
Chapter 4	Receiver Structure for PAM Signals	225
4.1	Functional Block Diagram of a Receiver for PAM Signal	225
4.1.1	Timing Recovery	229
4.1.2	Phase Recovery	232
	Bibliography	234
4.2	Sufficient Statistics for Reception in Gaussian Noise	234
4.2.1	Vector Space Representation of Signals	235
4.2.2	Band-Limited Signals	236
4.2.3	Equivalence Theorem	239
4.2.4	Sufficient Statistics	241
4.2.5	Main Points	244
	Bibliography	246
4.3	Optimum ML Receivers	246
4.3.1	Receiver Objectives and Synchronized Detection	246
4.3.2	Optimum ML Receiver for Constant Synchronization Parameters	249
4.3.3	Digital Matched Filter	258
4.3.4	Main Points	267
4.3.5	Bibliographical Notes	268
4.3.6	Appendix	268
	Bibliography	270

Chapter 5	Synthesis of Synchronization Algorithms	271
5.1	Derivation of ML Synchronization Algorithms	271
5.2	Estimator Structures for Slowly Varying Synchronization Parameters	275
5.2.1	Time Scale Separation	275
5.2.2	Truncation and L Symbols Approximation of the Likelihood Estimators	277
5.2.3	Maximum Search Algorithm	280
5.2.4	Error Feedback Systems	281
5.2.5	Main Points	282
	Bibliography	283
5.3	NDA Timing Parameter Estimation	283
5.4	NDA Timing Parameter Estimation by Spectral Estimation	289
	Bibliography	295
5.5	DA (DD) Timing Parameter Estimators	296
	Bibliography	298
5.6	Timing Error Feedback Systems at Higher Than Symbol Rate	298
5.6.1	DD and Phase-Directed Timing Recovery	298
5.6.2	NDA Timing Recovery	303
	Bibliography	304
5.7	Timing Error Feedback Systems at Symbol Rate	304
5.7.1	Ad Hoc Performance Criteria	310
5.7.2	Main Points	311
	Bibliography	311
5.8	(DD&D ϵ) Carrier Phasor Estimation and Phase Error Feedback	311
5.9	Phasor-Locked Loop (PHLL)	313
	Bibliography	316
5.10	NDA Carrier Phasor Estimation and Phase Error Feedback Systems for M-PSK	316
5.10.1	NDA Phasor Estimation for M-PSK Signals	316
5.10.2	NDA Phase Error Feedback Systems	317
5.10.3	Main Points	321
	Bibliography	321
5.11	Phase and Timing Recovery for Nonlinear Modulation Schemes	321
	Bibliography	322
Chapter 6	Performance Analysis of Synchronizers	325
6.1	Bounds on Synchronization Parameter Errors	325
6.2	Appendix: Fisher Information Matrix	331

	Bibliography	340
6.3	Tracking Performance of Carrier and Symbol Synchronizers	340
6.3.1	Introduction	340
6.3.2	Tracking Performance Analysis Methods	341
6.3.3	Decision-Directed (DD&D ϵ) Carrier Synchronization	347
6.3.4	Non-Decision-Aided Carrier Synchronization	349
6.3.5	Decision-Directed (DD) Symbol Synchronization	351
6.3.6	Non-Decision-Aided Symbol Synchronizer	355
6.3.7	Tracking Performance Comparison	358
6.3.8	Effect of Time-Varying Synchronization Parameters	369
6.3.9	Main Points	376
6.3.10	Bibliographical Notes	378
6.3.11	Appendix: Self-Noise Contribution to Timing Error Variance	381
	Bibliography	383
6.4	Cycle Slipping	385
6.4.1	Introduction	385
6.4.2	Effect of Cycle Slips on Symbol Detection	385
6.4.3	Cycle Slips in Feedback Synchronizers	387
6.4.4	Cycle Slips in Feedforward Synchronizers	391
6.4.5	Main Points	395
6.4.6	Bibliographical Notes	396
6.4.7	Appendix: Approximating a Discrete-Time System by a Continuous-Time System	397
	Bibliography	399
6.5	Acquisition of Carrier Phase and Symbol Timing	400
6.5.1	Introduction	400
6.5.2	Feedback Synchronizers	401
6.5.3	Feedforward Synchronizers for Short Burst Operation	407
6.5.4	Feedforward Synchronizers for Long Burst Operation and Continuous Operation	410
6.5.5	Main Points	416

	6.5.6 Bibliographical Notes	417
	Bibliography	418
Chapter 7	Bit Error Rate Degradation Caused by Random Tracking Errors	419
	7.1 Introduction	419
	7.2 ML Detection of Data Symbols	419
	7.3 Derivation of an Approximate Expression for BER Degradation	420
	7.4 M-PSK Signal Constellation	422
	7.4.1 Carrier Phase Errors	426
	7.4.2 Timing Errors	426
	7.5 M-PAM and M^2 -QAM Signal Constellations	427
	7.5.1 Carrier Phase Errors	431
	7.5.2 Timing Errors	431
	7.6 Examples	432
	7.7 Coded Transmission	439
	7.8 Main Points	440
	7.9 Bibliographical Notes	440
	Bibliography	442
Chapter 8	Frequency Estimation	445
	8.1 Introduction/Classification of Frequency Control Systems	445
	8.1.1 Channel Model and Likelihood Function	445
	8.1.2 Classification of Algorithms	447
	8.1.3 Main Points	448
	8.2 Frequency Estimator Operating Independently of Timing Information	448
	8.2.1 Frequency Estimation via Spectrum Analysis	453
	8.2.2 Frequency Estimation via Phase Increment Estimation	457
	Bibliography	462
	8.3 Frequency Error Feedback Systems Operating Independently of Timing Information	464
	8.3.1 Tracking Performance Analysis	469
	8.3.2 Appendix: Calculation of the Self-Noise Term	472
	8.3.3 Discussion of NDA and ND_{ϵ} Algorithms	475
	8.3.4 Main Points	476
	Bibliography	477
	8.4 Frequency Estimators Operating with Timing Information	478
	8.4.1 Derivation of the Frequency Estimation Algorithm	478

8.4.2	Performance in the Presence of Noise	482
8.4.3	Miscellaneous Modifications of DA Estimators	486
8.4.4	Example of an All-Feedforward Carrier Synchronization Structure	488
	Bibliography	491
8.5	Frequency Error Feedback Systems Operating with Timing Information	492
8.5.1	Performance in the Presence of Additive Noise	494
8.5.2	Appendix: Computation of $\text{var}\{\Omega\}$ as a Function of E_s/N_0	496
8.5.3	Main Points	499
8.6	Frequency Estimators for MSK Signals	499
8.6.1	Performance Analysis	502
8.7	Bibliographical Notes	503
	Bibliography	504
Chapter 9	Timing Adjustment by Interpolation	505
9.1	Digital Interpolation	505
9.1.1	MMSE FIR Interpolator	507
9.1.2	Polynomial FIR Interpolator	513
9.1.3	Classical Lagrange Interpolation	518
9.1.4	Appendix	521
9.2	Interpolator Control	523
9.2.1	Interpolator Control for Timing Error Feedback Systems	523
9.2.2	Interpolator Control for Timing Estimators	529
9.2.3	Tracking Performance and Decimation Revisited	530
9.2.4	Main Points	530
9.2.5	Bibliographical Notes	531
	Bibliography	531
Chapter 10	DSP System Implementation	533
10.1	Digital Signal Processing Hardware	533
10.2	DSP System Hardware-Software Co-Design	536
10.3	Quantization and Number Representation	537
10.4	ASIC Design Case Study	540
10.4.1	Implementation Loss	541
10.4.2	Design Methodology	542
10.4.3	Digital Video Broadcast Specification	542
10.4.4	Receiver Structure	544
10.4.5	Input Quantization	545
10.4.6	Timing and Phase Synchronizer Structure	549

10.4.7	Digital Phase-Locked Loop (DPLL) for Phase Synchronization	549
10.4.8	Timing Recovery	559
10.5	Bit Error Performance of the DVB Chip	562
10.6	Implementation	563
10.7	CAD Tools and Design Methodology	564
10.7.1	Algorithm Design	565
10.7.2	Architecture Design	565
10.8	Topics Not Covered	566
	Bibliography	566
10.9	Bibliography Notes on Convolutional Coding and Decoding	568
10.9.1	High-Rate Viterbi Decoders	568
10.9.2	Area-Efficient Implementations for Low to Medium Speed	569
10.9.3	SMU Architectures	570
10.9.4	Decoding of Concatenated Codes	571
10.9.5	Punctured Codes	571
	Bibliography	572
10.10	Bibliography Notes on Reed-Solomon Decoders	575
10.10.1	Conventional Decoding Methods	575
10.10.2	Soft-Decision RS Decoding	576
10.10.3	Concatenated Codes	576
	Bibliography	577

PART E Communication over Fading Channels

Chapter 11	Characterization, Modeling, and Simulation of Linear Fading Channels	581
11.1	Introduction	581
11.2	Digital Transmission over Continuous-Time and Discrete-Equivalent Fading Channels	582
11.2.1	Transmission over Continuous-Time Fading Channels	590
11.2.2	Discrete-Equivalent Transmission Behavior of Fading Channels	590
11.2.3	Statistical Characterization of Fading Channels	595
11.2.4	Main Points	608
11.3	Modeling and Simulation of Discrete- Equivalent Fading Channels	610
11.3.1	Direct Filtering Approach to Selective Fading Channel Simulation	610
11.3.2	Transformed Filtering Approach	

	to Selective Fading Channel Simulation	615
	11.3.3 Main Points	624
11.4	Bibliographical Notes	625
	Bibliography	626
Chapter 12	Detection and Parameter Synchronization on Fading Channels	631
12.1	Fading Channel Transmission Models and Synchronization Parameters	631
	12.1.1 Flat Fading Channel Transmission	634
	12.1.2 Selective Fading Channel Transmission	635
	12.1.3 Main Points	637
12.2	Optimal Joint Detection and Synchronization	638
	12.2.1 The Bayesian Approach to Joint Detection and Synchronization	639
	12.2.2 Optimal Linear Estimation of Static and Gaussian Dynamic Synchronization Parameters	642
	12.2.3 Joint Detection and Estimation for Flat Fading Channels	651
	12.2.4 Joint Detection and Estimation for Selective Fading Channels	662
	12.2.5 Main Points	670
	12.2.6 Appendices	672
	12.3 Bibliographical Notes	676
	Bibliography	677
Chapter 13	Receiver Structures for Fading Channels	679
13.1	Outer and Inner Receiver for Fading Channels	679
13.2	Inner Receiver for Flat Fading Channels	685
13.3	Inner Receiver for Selective Fading Channels	691
	13.3.1 Recursive Computation of the Decision Metric	691
	13.3.2 Maximum-Likelihood Sequence Detection	694
	13.3.3 Reduced-Complexity ML Sequence Detection	697
	13.3.4 Adjustment of Inner Receiver Components for Selective Fading Channels	701
	13.3.5 Example: Inner Receiver Prefiltering for Selective Fading Channels	707
	13.3.6 Main Points	713
13.4	Spread Spectrum Communication	714

	13.4.1	Modulator and Demodulator Structure	714
	13.4.2	Synchronization of Pseudorandom Signals	716
	13.5	Bibliographical Notes	717
		Bibliography	718
Chapter 14		Parameter Synchronization for Flat Fading Channels	723
	14.1	Non-Data-Aided (NDA) Flat Fading Channel Estimation and Detection	723
	14.1.1	Optimal One-Step Channel Prediction	723
	14.1.2	Reduced-Complexity One-Step Channel Prediction	725
	14.1.3	Decision-Directed (DD) Flat Fading Channel Estimation and Detection	731
	14.1.4	Main Points	738
	14.2	Data-Aided (DA) Flat Fading Channel Estimation and Detection	739
	14.2.1	DA Flat Fading Channel Estimation	741
	14.2.2	Uniform DA Channel Sampling and Estimation	744
	14.2.3	Aliasing and End Effects in DA Channel Estimation	748
	14.2.4	Example: DA Receiver for Uncoded M-PSK	752
	14.2.5	Example: DA Receiver for Trellis-Coded Modulation	757
	14.2.6	Main Points	761
	14.3	Bibliographical Notes	762
		Bibliography	762
Chapter 15		Parameter Synchronization for Selective Fading Channels	765
	15.1	Non-Data-Aided (NDA) Selective Fading Channel Estimation and Detection	765
	15.1.1	LMS-Kalman and LMS-Wiener One-Step Channel Prediction	765
	15.1.2	Decision-Directed (DD) Selective Fading Channel Estimation and Detection	772
	15.1.3	Main Points	782
	15.2	Data-Aided (DA) Selective Fading Channel Estimation and Detection	782
	15.2.1	DA Selective Fading Channel Estimation	783

15.2.2	Maximum-Likelihood DA Snapshot Acquisition	787
15.2.3	Example: DA Receiver for Uncoded M-PSK	793
15.2.4	Example: DA Receiver for Trellis-Coded Modulation	804
15.2.5	Main Points	812
15.3	Bibliographical Notes	814
	Bibliography	814
	Index	819
