EXTRUSION

Processes, Machinery, Tooling

Dr.-Ing. KURT LAUE

(Deceased) Formerly Director
Vereinigte Deutsche Metallwerke
Frankfurt/Main, West Germany

Dr.-Ing. HELMUT STENGER

Technical Director
Glyco do Brasil
Industria Metallurgica, Ltda.
Cataguases, Brazil

Translators from the German version:

A. F. Castle, B.Sc. (Eng.), Ph.D., D.I.C.

Senior Process Engineer
Fielding & Platt Limited
Gloucester GL1 5RF, England

Dipl.-Ing. Dr. mont. Gernot Lang

Head of the Extrusion Research Dept.
Vereinigte Metallwerke Ranshofen-Berndorf AG
A-5282 Ranshofen, Austria

AMERICAN SOCIETY FOR METALS
Metals Park, Ohio 44073

Contents

I	General Principles	1
1.1.	Basic Processes	1
1.1.1.	Method of Operation and Historical Development	1
1.1.2.	Mechanical State of Stress and Workability in Extrusion	2
1.1.3.	Comparison With Other Deformation Processes	4
1.2.	Material Flow in Extrusion	5
1.2.1.	Methods of Investigation	6
1.2.2.	Typical Flow Patterns in Extrusion	6
1.2.3.	Extrusion Defects Produced by Undesirable Metal Flow, and Methods of Prevention	9
1.3.	Heat Balance and Temperature Changes in Extrusion	24
1.3.1.	Temperature Profile in Hot Billets	24
1.3.2.	Heat Balance in Extrusion	25
1.3.3.	“Isothermal” Extrusion	33
1.3.4.	Maximum Extrusion Speed	34
1.4.	Load and Energy Requirements in Extrusion	38
1.4.1.	Survey of Methods of Calculation	38
1.4.2.	Methods Used in Practice Based on Elementary Analysis	42
2	Extrusion Processes	63
2.1.	Conventional Direct Extrusion	63
2.1.1.	Direct Extrusion With and Without Lubrication or a Shell	64
2.1.2.	Billet-to-Billet Extrusion	74
2.2.	Indirect Extrusion	75
2.2.1.	Load and Friction	75
2.2.2.	Advantages and Disadvantages of Indirect Extrusion	76

3.3. Extrusion Technology for Materials Extruded Between 300 and 600 °C	124
3.3.1. Extrusion of Aluminum	124
3.3.2. Extrusion of Magnesium	152
3.3.3. Extrusion of Zinc	155
3.3.4. Extrusion of Low Melting Point Brazing Alloys	155
3.4. Extrusion Technology for Materials With Extrusion Temperatures Between 600 and 1000 °C	156
3.4.1. Copper Alloys	156
3.4.2. Extrusion of Titanium and Titanium Alloys	180
3.4.3. Extrusion of Zirconium	184
3.4.4. Extrusion of Beryllium	185
3.4.5. Extrusion of Uranium	186
3.5. Extrusion Technology for Materials With Extrusion Temperatures Above 1000 °C	187
3.5.1. Extrusion of Nickel and Nickel Alloys	187
3.5.2. Steel Extrusion	192
3.5.3. Extrusion of High Melting Point Metals	209
3.6. Extrusion of Powdered Metals	210
4 Design and Construction of Extrusion Presses	217
4.1. Historical Background	217
4.2. Classification and Design of Extrusion Installations	219
4.2.1. Types of Drive	221
4.2.2. Extrusion Presses for Nonferrous Metals	225
4.2.3. Horizontal Extrusion Presses	230
4.2.4. Vertical Extrusion Presses	241
4.2.5. Controls	241
4.3. Billet Heating Systems	252
4.3.1. Induction Heating	252
4.3.2. Gas Heating	254
4.3.3. Combined Gas and Induction Heating	255
4.3.4. Temperature Control	256
4.4. Auxiliary Equipment and Handling Gear for Nonferrous Metal Extrusion	258
4.4.1. Billet Feed to the Furnace	258

- 4.4.2. Billet Transport to the Press 259
- 4.4.3. Auxiliary Equipment at the Press 259
- 4.4.4. Handling Equipment for Aluminum Extrusion Presses 260
- 4.4.5. Runout Equipment for Heavy Metal Extrusion Presses 268
- 4.5. Hydraulic Cable Sheathing Presses 276
- 4.6. Extrusion Presses for Steel 280
 - 4.6.1. Mechanical Presses for Steel Tubes 281
 - 4.6.2. Hydraulic Extrusion Presses for Steel Tubes and Sections 281
 - 4.6.3. Auxiliary Equipment 282
 - 4.6.4. Vertical Tube Presses for Large Tubes 287
- 4.7. Hydrostatic Extrusion 289
 - 4.7.1. Design of the Fielding Press 292
 - 4.7.2. Design of the ASEA Press 292

5 Extrusion Tooling

297

- 5.1. Construction and Terminology of Extrusion Tooling 297
 - 5.1.1. Construction of the Tool Sets and Terminology 297
 - 5.1.2. Functions of the Individual Tools 322
 - 5.1.3. Dimensioning of Extrusion Tooling 322
 - 5.1.4. Dies for Sections and Hollow Shapes 325
- 5.2. Manufacture of Extrusion Dies 335
 - 5.2.1. Layout of the Die Apertures (Die Design) 336
 - 5.2.2. Manufacture of Extrusion Dies 342
- 5.3. Stresses in Extrusion Tooling 347
 - 5.3.1. Mechanical and Thermal Effects 347
 - 5.3.2. Die Wear 351
 - 5.3.3. Design of Containers With Round Bores 352
 - 5.3.4. Containers With Rectangular Bores 378
- 5.4. Steel Selection for Extrusion Tooling 385
 - 5.4.1. Development and Present State of Hot Working Steels 385
 - 5.4.2. Characteristics of Hot Working Steels 386
 - 5.4.3. Hot Working Steels for the Individual Tooling 392

5.4.4. Development Trends	400	
5.4.5. Heat Treatment and Maintenance of Extrusion Tooling	406	
5.5. Standardization of Extrusion Tooling	410	
6 Economics of Extrusion		415
6.1. General Analysis	415	
6.2. Productivity Comparison	416	
6.3. Methods of Increasing Efficiency	420	
6.3.1. Equipment	420	
6.3.2. Operating Crew	421	
6.3.3. Utilization of Equipment and Crew	421	
6.3.4. Scrap Losses	423	
6.3.5. Operating Practices	426	
7 Future Developments		429
7.1. Equipment	429	
7.1.1. Press Capacity	429	
7.1.2. Auxiliary Equipment	430	
7.2. Production Technology	430	
7.2.1. Extrusion Speed	430	
7.2.2. Quality	431	
7.3. Tooling	431	
7.3.1. Service Life	431	
7.3.2. Die Design	431	
7.3.3. Mechanical Properties	432	
Appendix 1. Symbols Used in This Book		433
Appendix 2. DIN Numbers, Designations, AISI Equivalents, and Compositions of Steels		436
Appendix 3. Approximate Chemical Compositions of Materials Mentioned in This Book		438
INDEX		443
