PREFACE TO FOURTH EDITION	xv
PREFACE TO THIRD EDITION	xvii
PREFACE TO SECOND EDITION	xix
PREFACE TO FIRST EDITION	xxi
ACKNOWLEDGEMENTS	xxiii
1. Units and Dimensions	1
1.1 Introduction	1
1.2 Systems of units	2
1.2.1 The centimetre–gram–second (c.g.s.) system	2
1.2.2 The <i>Système International d'Unités</i> (SI)	3
1.2.3 The foot–pound–second (f.p.s.) system	3
1.2.4 Derived units	4
1.2.5 Thermal units	5
1.2.6 Molar units	6
1.2.7 Electrical units	6
1.3 Conversion of units	6
1.4 Dimensional analysis	9
1.5 Buckingham's Π theorem	12
1.6 Further reading	15
1.7 Nomenclature	16
2. Flow of Fluids—Energy and Momentum Relationships	17
2.1 Introduction	17
2.2 Internal energy	17
2.3 Types of fluid	20
2.3.1 The incompressible fluid (liquid)	21
2.3.2 The ideal gas	21
2.3.3 The non-ideal gas	24
2.4 The fluid in motion	27
2.4.1 Continuity	28
2.4.2 Momentum changes in a fluid	29
2.4.3 Energy of a fluid in motion	33
2.4.4 Pressure and fluid head	35
2.4.5 Constant flow per unit area	35
2.4.6 Separation	36

2.5	Pressure–volume relationships	36
2.5.1	Incompressible fluids	36
2.5.2	Compressible fluids	37
2.6	Rotational or vortex motion in a fluid	38
2.6.1	The forced vortex	40
2.6.2	The free vortex	42
2.7	Further reading	43
2.8	References	44
2.9	Nomenclature	44
3.	Flow in Pipes and Channels	45
3.1	Introduction	45
3.2	The nature of fluid flow	45
3.2.1	Flow over a surface	47
3.2.2	Flow in a pipe	48
3.3	Shearing characteristics of a fluid	48
3.4	The drop in pressure for flow through a tube	49
3.4.1	Shear stress in fluid	50
3.4.2	Resistance to flow in pipes	51
3.4.3	Calculation of drop in pressure along a pipe	53
3.4.4	Roughness of pipe surfaces	55
3.5	Types of flow	59
3.5.1	Reynolds number, shear stress, and momentum transfer	59
3.5.2	Velocity distributions, streamline flow	60
3.5.3	Velocity distribution, turbulent flow	66
3.5.4	Miscellaneous friction losses	70
3.6	Flow with a free surface	75
3.6.1	Laminar flow down an inclined surface	76
3.6.2	Flow in open channels	77
3.7	Non-Newtonian behaviour	84
3.7.1	Steady-state shear-dependent behaviour	86
3.7.2	Time-dependent behaviour	93
3.7.3	Viscoelastic behaviour	95
3.7.4	Characterisation of non-Newtonian fluids	96
3.7.5	Relation between rheology and structure of material	98
3.7.6	Flow in pipes and channels of regular geometry	98
3.7.7	General equations for pipeline flow	106
3.7.8	Turbulent flow	108
3.8	Further reading	109
3.9	References	110
3.10	Nomenclature	110
4.	Flow of Compressible Fluids	113
4.1	Introduction	113
4.2	Flow of gas through a nozzle or orifice	113
4.2.1	Isothermal flow	114
4.2.2	Non-isothermal flow	116
4.3	Velocity of propagation of a pressure wave	122

CONTENTS

vii

4.4	Converging-diverging nozzles for gas flow	123
4.4.1	Maximum flow and critical pressure ratio	124
4.4.2	The pressure and area for flow	126
4.4.3	Effect of back pressure P_B on flow in nozzle	127
4.5	Flow in a pipe	128
4.5.1	Energy balance for flow of ideal gas	128
4.5.2	Isothermal flow of an ideal gas in a horizontal pipe	130
4.5.3	Non-isothermal flow of an ideal gas in a horizontal pipe	139
4.5.4	Adiabatic flow of an ideal gas in a horizontal pipe	139
4.5.5	Flow of non-ideal gases	143
4.6	Shock waves	143
4.7	Further reading	147
4.8	References	147
4.9	Nomenclature	148
5.	Flow of Multiphase Mixtures	149
5.1	Introduction	149
5.2	Two-phase gas(vapour)-liquid flow	150
5.2.1	Introduction	150
5.2.2	Flow regimes and flow patterns	151
5.2.3	Hold-up	154
5.2.4	Pressure, momentum, and energy relations	155
5.2.5	Erosion	162
5.3	Hydraulic transport	163
5.3.1	Introduction	163
5.3.2	Homogeneous non-settling suspensions	163
5.3.3	Coarse solids	166
5.3.4	Coarse solids in horizontal flow	166
5.3.5	Coarse solids in vertical flow	177
5.4	Pneumatic conveying	179
5.4.1	General considerations	179
5.4.2	Horizontal transport	180
5.4.3	Vertical transport	189
5.4.4	Practical applications	190
5.5	Further reading	191
5.6	References	191
5.7	Nomenclature	194
6.	Flow and Pressure Measurement	196
6.1	Introduction	196
6.2	Fluid pressure	197
6.2.1	Static pressure	197
6.2.2	Pressure measuring devices	198
6.2.3	Pressure signal transmission—the differential pressure cell	201
6.2.4	Impact pressure	202
6.3	Measurement of fluid flow	203
6.3.1	The pitot tube	204
6.3.2	Measurement by flow through a constriction	205
6.3.3	The orifice meter	208
6.3.4	The nozzle	212
6.3.5	The venturi meter	213
6.3.6	Pressure recovery in orifice-type meters	214
6.3.7	Variable area meters—rotameters	216

6.3.8	The notch or weir	218
6.3.9	Other methods of measuring flowrates	220
6.4	Further reading	225
6.5	References	225
6.6	Nomenclature	226
7.	Liquid Mixing	227
7.1	Introduction—Types of mixing	227
7.1.1	Single phase liquid mixing	227
7.1.2	Mixing of immiscible liquids	227
7.1.3	Gas-liquid mixing	228
7.1.4	Liquid-solid mixing	228
7.1.5	Gas-liquid-solid mixing	228
7.1.6	Solid-solid mixing	228
7.1.7	Miscellaneous mixing applications	229
7.2	Mixing mechanisms	230
7.2.1	Laminar mixing	230
7.2.2	Turbulent mixing	232
7.3	Scale-up of stirred vessels	233
7.4	Power consumption in stirred vessels	235
7.4.1	Low viscosity systems	235
7.4.2	High viscosity systems	241
7.5	Flow patterns in stirred tanks	245
7.6	Rate and time for mixing	249
7.7	Mixing equipment	252
7.7.1	Mechanical agitation	252
7.7.2	Portable mixers	256
7.7.3	Extruders	257
7.7.4	Static mixers	258
7.7.5	Other types of mixer	259
7.8	Mixing in continuous systems	260
7.9	Further reading	260
7.10	References	261
7.11	Nomenclature	262
8.	Pumping of Fluids	264
8.1	Introduction	264
8.2	Pumping equipment for liquids	265
8.2.1	Reciprocating pump	266
8.2.2	Positive displacement rotary pumps	271
8.2.3	The centrifugal pump	275
8.3	Pumping equipment for gases	287
8.3.1	The reciprocating piston compressor	288
8.3.2	Rotary blowers and compressors	288
8.3.3	Centrifugal blowers and compressors, including turbocompressors	290
8.3.4	Power required for the compression of gases	290
8.4	The use of compressed air for pumping	300
8.4.1	The air-lift pump	300
8.5	Vacuum-producing equipment	302
8.6	Power requirements for pumping through pipelines	305
8.6.1	Liquids	306
8.6.2	Gases	311
8.7	Further reading	312

8.8	References	312
8.9	Nomenclature	313
9.	Heat Transfer	315
9.1	Introduction	315
9.2	Basic considerations	315
9.2.1	Individual and overall coefficients of heat transfer	315
9.2.2	Mean temperature difference	318
9.3	Heat transfer by conduction	321
9.3.1	Conduction through a plane wall	321
9.3.2	Thermal resistances in series	324
9.3.3	Conduction through a thick-walled tube	325
9.3.4	Conduction through a spherical shell and to a particle	326
9.3.5	Unsteady state conduction	328
9.3.6	Conduction with internal heat source	328
9.4	Heat transfer by convection	340
9.4.1	Natural and forced convection	340
9.4.2	Application of dimensional analysis to convection	341
9.4.3	Forced convection in tubes	343
9.4.4	Forced convection outside tubes	353
9.4.5	Flow in non-circular sections	359
9.4.6	Convection to spherical particles	360
9.4.7	Natural convection	361
9.5	Heat transfer by radiation	364
9.5.1	Definitions	364
9.5.2	Kirchhoff's law	365
9.5.3	Energy emitted by a black body	365
9.5.4	Heat transferred by radiation	367
9.5.5	Geometric or angle factors	368
9.5.6	Gas radiation	372
9.6	Heat transfer in the condensation of vapours	375
9.6.1	Film coefficients for vertical and inclined surfaces	375
9.6.2	Condensation on vertical and horizontal tubes	378
9.6.3	Dropwise condensation	381
9.6.4	Condensation of mixed vapours	382
9.7	Boiling liquids	386
9.7.1	Conditions for boiling	386
9.7.2	Types of boiling	387
9.7.3	Heat transfer coefficients and heat flux	389
9.7.4	Analysis based on bubble characteristics	394
9.7.5	Sub-cooled boiling	396
9.7.6	Design considerations	397
9.8	Heat transfer in reaction vessels	398
9.8.1	Helical cooling coils	398
9.8.2	Jacketed vessels	401
9.8.3	Time of heating or cooling	403
9.9	Shell and tube exchangers	405
9.9.1	Description	405
9.9.2	Mean temperature difference in multipass exchangers	408
9.9.3	Values of film coefficients	413
9.9.4	Effectiveness of heat exchangers	419
9.10	Other forms of equipment	421
9.10.1	Finned tube units	421

9.10.2	Plate type exchangers	426
9.10.3	Spiral heat exchangers	428
9.10.4	Compact heat exchangers	429
9.10.5	Scraped-surface heat exchangers	432
9.11	Thermal insulation	433
9.11.1	Heat losses through lagging	433
9.11.2	Economic thickness of lagging	435
9.11.3	Critical thickness of lagging	435
9.12	Further reading	439
9.13	References	440
9.14	Nomenclature	443
10.	Mass Transfer	446
10.1	Introduction	446
10.2	Diffusion in binary gas mixtures	447
10.2.1	Properties of binary mixtures	447
10.2.2	Equimolecular counterdiffusion	448
10.2.3	Mass transfer through a stationary gas	449
10.2.4	Diffusivities of gases and vapours	452
10.2.5	Mass transfer velocities	457
10.2.6	General case for gas-phase mass transfer	458
10.2.7	Diffusion as a mass flux	459
10.2.8	Thermal diffusion	460
10.2.9	Unsteady state mass transfer	461
10.3	Multicomponent gas-phase systems	465
10.3.1	Molar flux in terms of effective diffusivity	465
10.3.2	Maxwell's law of diffusion	465
10.4	Diffusion in liquids	467
10.4.1	Liquid phase diffusivities	469
10.5	Mass transfer across a phase boundary	469
10.5.1	The two-film theory	471
10.5.2	The penetration theory	473
10.5.3	The film-penetration theory	485
10.5.4	Other theories of mass transfer	487
10.5.5	Interfacial turbulence	487
10.5.6	Mass transfer coefficients	488
10.5.7	Countercurrent mass transfer and transfer units	490
10.5.8	Other applications of theories of interphase transfer	493
10.6	Mass transfer to a sphere	493
10.7	Mass transfer and chemical reaction	494
10.8	Practical studies of mass transfer	496
10.8.1	The j -factor of Chilton and Colburn for flow in tubes	496
10.8.2	Mass transfer at plane surfaces	499
10.8.3	Effect of surface roughness and form drag	500
10.8.4	Mass transfer to single spheres	501
10.9	Further reading	502
10.10	References	502
10.11	Nomenclature	504
11.	The Boundary Layer	506
11.1	Introduction	506
11.2	The momentum equation	509
11.3	The streamline portion of the boundary layer	511
11.3.1	Shear stress at the surface	511

CONTENTS

xi

11.4	The turbulent portion of the boundary layer	515
11.4.1	The laminar sub-layer	518
11.5	Boundary layer theory applied to pipe flow	521
11.5.1	Entry conditions	521
11.5.2	Application of boundary layer theory	523
11.6	The boundary layer for heat transfer	525
11.6.1	The energy balance	526
11.6.2	Heat transfer for streamline flow over a plane surface—constant surface temperature	527
11.6.3	Heat transfer for streamline flow over a plane surface—constant surface heat flux	531
11.7	The boundary layer for mass transfer	532
11.8	Force and momentum balances, Reynolds number and laminar-turbulent transition	533
11.9	Further reading	537
11.10	References	537
11.11	Nomenclature	537
12.	Momentum, Heat, and Mass Transfer	539
12.1	Introduction	539
12.2	Transfer by molecular diffusion	541
12.2.1	Momentum transfer	541
12.2.2	Heat transfer	541
12.2.3	Mass transfer	541
12.2.4	Viscosity	542
12.2.5	Thermal conductivity	543
12.2.6	Diffusivity	544
12.3	Eddy transfer	545
12.3.1	The nature of turbulent flow	545
12.3.2	Mixing length and eddy kinematic viscosity	547
12.4	Universal velocity profile	551
12.4.1	The turbulent core	551
12.4.2	The laminar sub-layer	552
12.4.3	The buffer layer	552
12.4.4	Velocity profile for all regions	553
12.4.5	Velocity gradients	553
12.4.6	Laminar sub-layer and buffer layer thicknesses	554
12.4.7	Variation of eddy kinematic viscosity	555
12.4.8	Effect of curvature of pipe wall on shear stress	556
12.5	Friction factor for a smooth pipe	557
12.6	Effect of surface roughness on shear stress	558
12.7	Simultaneous momentum, heat and mass transfer	560
12.8	Reynolds analogy	562
12.8.1	Simple form of analogy between momentum, heat and mass transfer	562
12.8.2	Mass transfer with bulk flow	564
12.8.3	Taylor–Prandtl modification of Reynolds analogy for heat transfer and mass transfer	566
12.8.4	Use of universal velocity profile in Reynolds analogy	568
12.8.5	Flow over a plane surface	571
12.8.6	Flow in a pipe	572
12.9	Further reading	576
12.10	References	576
12.11	Nomenclature	576

13. Humidification and Water Cooling	578
13.1 Introduction	578
13.2 Humidification terms	579
13.2.1 Definitions	579
13.2.2 Wet-bulb temperature	581
13.2.3 Adiabatic saturation temperature	583
13.3 Humidity data for the air–water system	585
13.3.1 Temperature–humidity chart	586
13.3.2 Enthalpy–humidity chart	589
13.4 Determination of humidity	595
13.5 Humidification and dehumidification	596
13.5.1 Methods of increasing humidity	596
13.5.2 Dehumidification	597
13.6 Water cooling	598
13.6.1 Cooling towers	598
13.6.2 Design of natural-draught towers	601
13.6.3 Height of packing for both natural and mechanical draught towers	602
13.6.4 Change in air condition	607
13.6.5 Temperature and humidity gradients in a water cooling tower	607
13.6.6 Evaluation of heat and mass transfer coefficients	608
13.6.7 Humidifying towers	613
13.7 Systems other than air–water	614
13.8 Further reading	619
13.9 References	620
13.10 Nomenclature	620
APPENDIX: Conversion factors for some common SI units	624
Tables of physical properties	626
Steam tables	641
Mathematical tables	648
PROBLEMS	659
INDEX	695
