

MECHANICAL BEHAVIOR OF MATERIALS

**ENGINEERING METHODS FOR
DEFORMATION, FRACTURE,
AND FATIGUE**

Prentice-Hall International Editions

NORMAN E. DOWLING

Contents

Preface, xvii

1 Introduction, 1

1.1 Introduction, 1

1.2 Types of Material Failure, 2

1.2.1 Elastic and Plastic Deformation, 3

1.2.2 Creep Deformation, 4

1.2.3 Fracture Under Static and Impact Loading, 5

1.2.4 Fatigue Under Cyclic Loading, 7

1.2.5 Combined Effects, 9

1.3 Design and Materials Selection, 10

1.3.1 Iterative and Stepwise Nature of Design, 12

1.3.2 Safety Factors, 13

1.3.3 Prototype and Component Testing, 14

- 1.3.4 Service Experience, 15
- 1.4 Technological Challenge, 15
- 1.5 Economic Importance of Fracture, 18
- 1.6 Summary, 20
- References, 21
- Problems and Questions, 21

2 Structure and Deformation in Materials, 23

- 2.1 Introduction, 23
- 2.2 Bonding in Solids, 26
 - 2.2.1 Primary Chemical Bonds, 26
 - 2.2.2 Discussion of Primary Bonds, 27
 - 2.2.3 Secondary Bonds, 28
- 2.3 Structure in Crystalline Materials, 30
 - 2.3.1 Basic Crystal Structures, 30
 - 2.3.2 More Complex Crystal Structures, 31
 - 2.3.3 Defects in Crystals, 32
- 2.4 Elastic Deformation and Theoretical Strength, 35
 - 2.4.1 Elastic Deformation, 35
 - 2.4.2 Trends in Elastic Modulus Values, 36
 - 2.4.3 Theoretical Strength, 37
- 2.5 Inelastic Deformation, 39
 - 2.5.1 Plastic Deformation by Dislocation Motion, 40
 - 2.5.2 Discussion of Plastic Deformation, 43
 - 2.5.3 Creep Deformation, 44
- 2.6 Summary, 45
- References, 47
- Problems and Questions, 47

3 A Survey of Engineering Materials, 49

- 3.1 Introduction, 49
- 3.2 Alloying and Processing of Metals, 50
 - 3.2.1 Cold Work and Annealing, 51
 - 3.2.2 Solid Solution Strengthening, 53
 - 3.2.3 Precipitation Hardening and Other Multiple Phase Effects, 54

- 3.3 Irons and Steels, 56
 - 3.3.1 Naming Systems for Irons and Steels, 58
 - 3.3.2 Cast Irons, 58
 - 3.3.3 Carbon Steels, 59
 - 3.3.4 Low-Alloy Steels, 61
 - 3.3.5 Stainless Steels, 62
 - 3.3.6 Tool Steels and Other Special Steels, 63
- 3.4 Nonferrous Metals, 64
 - 3.4.1 Aluminum Alloys, 64
 - 3.4.2 Titanium Alloys, 66
 - 3.4.3 Other Nonferrous Metals, 67
- 3.5 Polymers, 68
 - 3.5.1 Molecular Structure of Thermoplastics, 69
 - 3.5.2 Crystalline Versus Amorphous Thermoplastics, 71
 - 3.5.3 Thermosetting Plastics, 73
 - 3.5.4 Elastomers, 75
 - 3.5.5 Strengthening Effects, 76
 - 3.5.6 Combining and Modifying Polymers, 77
- 3.6 Ceramics and Glasses, 79
 - 3.6.1 Clay Products, Natural Stone, and Concrete, 81
 - 3.6.2 Engineering Ceramics, 82
 - 3.6.3 Cermets; Cemented Carbides, 83
 - 3.6.4 Glasses, 83
- 3.7 Composite Materials, 85
 - 3.7.1 Particulate Composites, 86
 - 3.7.2 Fibrous Composites, 87
 - 3.7.3 Laminated Composites, 91
- 3.8 Summary, 91
 - References, 94
 - Problems and Questions, 94

4 Stress-Strain Equations and Models, 96

- 4.1 Introduction, 96
- 4.2 Rheological Models, 97
- 4.3 Elastic Deformation, 99
 - 4.3.1 Elastic Constants, 100
 - 4.3.2 Hooke's Law for Three Dimensions, 102
 - 4.3.3 Volumetric Strain and Hydrostatic Stress, 106
 - 4.3.4 Thermal Strains, 108

- 4.4 Plastic Deformation, *110*
 - 4.4.1 Stress-Strain Behavior, *110*
 - 4.4.2 Rheological Models for Plastic Deformation, *111*
 - 4.4.3 Unloading and Reloading Response of Models, *113*
- 4.5 Creep Deformation, *117*
 - 4.5.1 Stress-Strain Behavior, *117*
 - 4.5.2 Rheological Modeling of Steady-State Creep, *118*
 - 4.5.3 Relaxation Behavior of Elastic, Steady-State Creep Model, *120*
 - 4.5.4 Rheological Modeling of Transient Creep, *122*
- 4.6 Anisotropic Materials, *123*
 - 4.6.1 Anisotropic Hooke's Law, *123*
 - 4.6.2 Orthotropic and Cubic Materials, *124*
 - 4.6.3 Fibrous Composites, *126*
 - 4.6.4 Elastic Modulus Parallel to Fibers, *128*
 - 4.6.5 Elastic Modulus Transverse to Fibers, *129*
 - 4.6.6 Other Elastic Constants and Discussion, *130*
- 4.7 Summary, *131*
 - References, *134*
 - Problems and Questions, *134*

5 Mechanical Testing: Tension Test and Other Basic Tests, 139

- 5.1 Introduction, *139*
 - 5.1.1 Test Equipment, *140*
 - 5.1.2 Standard Test Methods, *143*
- 5.2 Introduction to Tension Test, *145*
- 5.3 Engineering Stress-Strain Properties, *148*
 - 5.3.1 Elastic Constants, *148*
 - 5.3.2 Engineering Measures of Strength, *150*
 - 5.3.3 Engineering Measures of Ductility, *151*
 - 5.3.4 Discussion of Necking Behavior and Ductility, *152*
 - 5.3.5 Engineering Measures of Energy Capacity, *154*
 - 5.3.6 Strain Hardening, *155*
- 5.4 Trends in Tensile Behavior, *156*
 - 5.4.1 Trends for Different Materials, *157*
 - 5.4.2 Effects of Temperature and Strain Rate, *161*
- 5.5 True Stress-Strain Interpretation of Tension Test, *162*
 - 5.5.1 Definitions of True Stress and Strain, *163*
 - 5.5.2 Constant Volume Assumption, *163*
 - 5.5.3 Limitations on True Stress-Strain Equations, *164*

Contents

- 5.5.4 Bridgman Correction for Hoop Stress, 165
- 5.5.5 True Stress-Strain Curves, 167
- 5.5.6 True Stress-Strain Properties, 168
- 5.5.7 True Strain at Necking, 172
- 5.6 Compression Test, 173
 - 5.6.1 Test Methods for Compression, 173
 - 5.6.2 Materials Properties in Compression, 174
 - 5.6.3 Trends in Compressive Behavior, 175
- 5.7 Hardness Tests, 176
 - 5.7.1 Brinell Hardness Test, 178
 - 5.7.2 Vickers Hardness Test, 178
 - 5.7.3 Rockwell Hardness Test, 180
 - 5.7.4 Hardness Correlations and Conversions, 183
- 5.8 Notch-Impact Tests, 184
 - 5.8.1 Types of Test, 185
 - 5.8.2 Trends in Impact Behavior and Discussion, 186
- 5.9 Bending and Torsion Tests, 190
 - 5.9.1 Bending (Flexure) Tests, 190
 - 5.9.2 Heat-Deflection Test, 192
 - 5.9.3 Torsion Test, 193
- 5.10 Summary, 194
 - References, 195
 - Problems and Questions, 196

6 Review of Complex and Principal States of Stress and Strain, 201

- 6.1 Introduction, 201
- 6.2 Plane Stress, 202
 - 6.2.1 Rotation of Coordinate Axes, 203
 - 6.2.2 Principal Stresses, 204
 - 6.2.3 Mohr's Circle, 207
- 6.3 Three-Dimensional States of Stress, 211
 - 6.3.1 Principal Normal Stresses, 212
 - 6.3.2 Principal Shear Stresses, 213
 - 6.3.3 Mohr's Circles for the Principal Planes, 216
- 6.4 Plane Stress Reconsidered as a Three-Dimensional Case, 219
- 6.5 Stresses on the Octahedral Planes, 223
- 6.6 Complex States of Strain, 224
 - 6.6.1 Principal Strains, 225

- 6.6.2 Special Considerations for Plane Stress, 226
- 6.7 Summary, 228
 - References, 229
 - Problems and Questions, 230

7 Yielding and Fracture under Combined Stresses, 233

- 7.1 Introduction, 233
 - 7.1.1 Need for Failure Criteria, 234
 - 7.1.2 Additional Comments, 235
- 7.2 General Form of Failure Criteria, 235
- 7.3 Maximum Normal Stress Fracture Criterion, 237
 - 7.3.1 Graphical Representation of the Normal Stress Criterion, 237
 - 7.3.2 Graphical Interpretation of the Safety Factor, 238
- 7.4 Maximum Shear Stress Yield Criterion, 240
 - 7.4.1 Development of the Maximum Shear Stress Criterion, 240
 - 7.4.2 Graphical Representation of the Maximum Shear Stress Criterion, 241
 - 7.4.3 Hydrostatic Stresses and the Maximum Shear Stress Criterion, 243
- 7.5 Octahedral Shear Stress Yield Criterion, 245
 - 7.5.1 Development of the Octahedral Shear Stress Criterion, 246
 - 7.5.2 Graphical Representation of the Octahedral Shear Stress Criterion, 247
 - 7.5.3 Energy of Distortion, 249
- 7.6 Discussion and Comparison of the Basic Failure Criteria, 251
 - 7.6.1 Comparison of Failure Criteria, 251
 - 7.6.2 Yield Criteria for Anisotropic and Uneven Materials, 252
 - 7.6.3 Fracture in Brittle Materials, 253
- 7.7 Coulomb-Mohr Fracture Criterion, 255
 - 7.7.1 Development of the Coulomb-Mohr Criterion, 256
 - 7.7.2 Graphical Representation of the Coulomb-Mohr Criterion, 258
 - 7.7.3 Discussion of the Coulomb-Mohr Criterion, 260
- 7.8 Modified Mohr Fracture Criterion, 261
 - 7.8.1 Details of the Modified Mohr Criterion, 262
 - 7.8.2 Comments on the Modified Mohr Criterion, 264
- 7.9 Additional Comments on Failure Criteria, 265
 - 7.9.1 Brittle Versus Ductile Behavior, 265
 - 7.9.2 Stress Raiser (Notch) Effects, 266
 - 7.9.3 Effects of Cracks and Their Time-Dependent Growth, 269
- 7.10 Summary, 269
 - New Terms and Symbols, 270
 - References, 271
 - Problems and Questions, 271

8 Fracture of Cracked Members, 276

- 8.1 Introduction, 276
- 8.2 Preliminary Discussion, 278
 - 8.2.1 Cracks as Stress Raisers, 279
 - 8.2.2 Behavior at Crack Tips in Real Materials, 280
 - 8.2.3 Effects of Cracks on Strength, 280
 - 8.2.4 Effects of Cracks on Brittle Versus Ductile Behavior, 283
 - 8.2.5 Internally Flawed Materials, 284
- 8.3 Mathematical Concepts, 285
 - 8.3.1 Strain Energy Release Rate, G , 286
 - 8.3.2 Stress Intensity Factor, K , 287
 - 8.3.3 Additional Comments on K and G , 289
- 8.4 Application of K to Design and Analysis, 291
 - 8.4.1 Mathematical Forms Used to Express K , 291
 - 8.4.2 Discussion, 294
 - 8.4.3 Cases of Special Interest for Practical Applications, 297
 - 8.4.4 Superposition for Combined Loading, 301
- 8.5 Fracture Toughness Values and Trends, 302
 - 8.5.1 Trends in K_{Ic} with Material, 306
 - 8.5.2 Effects of Temperature and Loading Rate, 307
 - 8.5.3 Microstructural Influences on K_{Ic} , 310
 - 8.5.4 Mixed-Mode Fracture, 312
- 8.6 Plastic Zone Size, and Plasticity Limitations on LEFM, 313
 - 8.6.1 Plastic Zone Size for Plane Stress, 314
 - 8.6.2 Plastic Zone Size for Plane Strain, 316
 - 8.6.3 Plasticity Limitations on LEFM, 317
 - 8.6.4 Plane Stress Versus Plane Strain, 318
- 8.7 Discussion of Fracture Toughness Testing, 320
 - 8.7.1 Standard Test Methods, 320
 - 8.7.2 Effect of Thickness on Fracture Behavior, 320
 - 8.7.3 Use of Plane Stress Fracture Data, 321
- 8.8 Extensions of Fracture Mechanics Beyond Linear Elasticity, 322
 - 8.8.1 Fully Plastic Loads, 323
 - 8.8.2 Plastic Zone Adjustment, 325
 - 8.8.3 The J -Integral, 326
 - 8.8.4 Crack-Tip Opening Displacement (CTOD), 328
- 8.9 Summary, 329
 - References, 332
 - Problems and Questions, 333

9 Fatigue of Materials: Introduction and Stress-Based Approach, 339

- 9.1 Introduction, 339
- 9.2 Definitions and Concepts, 340
 - 9.2.1 Description of Cyclic Loading, 341
 - 9.2.2 Point Stresses Versus Nominal Stresses, 343
 - 9.2.3 Stress Versus Life ($S-N$) Curves, 343
- 9.3 Sources of Cyclic Loading, 348
- 9.4 Fatigue Testing, 351
 - 9.4.1 Test Apparatus, 351
 - 9.4.2 Test Specimens, 355
- 9.5 The Physical Nature of Fatigue Damage, 355
- 9.6 Trends in $S-N$ Curves, 358
 - 9.6.1 Trends with Ultimate Strength, Mean Stress, and Geometry, 361
 - 9.6.2 Effects of Environment and Frequency of Cycling, 363
 - 9.6.3 Effects of Microstructure, 365
 - 9.6.4 Residual Stress and Other Surface Effects, 366
 - 9.6.5 Statistical Scatter, 368
- 9.7 Mean Stresses, 370
 - 9.7.1 Presentation of Mean Stress Data, 370
 - 9.7.2 Normalized Amplitude-Mean Diagrams, 371
 - 9.7.3 Life Estimates and Families of $S-N$ Curves, 374
- 9.8 Multiaxial Stresses, 377
 - 9.8.1 One Approach to Multiaxial Fatigue, 377
 - 9.8.2 Discussion, 381
- 9.9 Variable Amplitude Loading, 382
 - 9.9.1 The Palmgren-Miner Rule, 382
 - 9.9.2 Cycle Counting for Irregular Histories, 385
- 9.10 Summary, 389
 - References, 391
 - Problems and Questions, 392

10 Stress-Based Approach to Fatigue: Notched Members, 397

- 10.1 Introduction, 397
- 10.2 Causes of the $k_f < k_t$ Effect, 401
- 10.3 Notch Sensitivity and Empirical Estimates of k_f , 404
- 10.4 Notch Effects at Intermediate and Short Lives, 408
- 10.5 Combined Effects of Notches and Mean Stress, 411

Contents

- 10.5.1 Brittle Materials, 412
- 10.5.2 Ductile Materials, 413
- 10.5.3 Discussion, 414
- 10.6 Estimating Long Life Fatigue Strengths (Fatigue Limits), 418
 - 10.6.1 Estimation of Smooth Specimen Fatigue Limits, 418
 - 10.6.2 Factors Affecting Long Life Fatigue Strength, 420
 - 10.6.3 Reduction Factors for the Fatigue Limit, 421
- 10.7 Estimating *S-N* Curves, 422
 - 10.7.1 Estimates by the Method of Collins, 424
 - 10.7.2 Estimates by the Methods of Juvinall or Shigley, 425
 - 10.7.3 Discussion, 428
- 10.8 Designing to Avoid Fatigue Failure, 432
 - 10.8.1 Design Details, 432
 - 10.8.2 Surface Residual Stresses, 434
 - 10.8.3 Variable Amplitude Loading, 437
 - 10.8.4 Safety Factors, 440
 - 10.8.5 Load Line Approach to Safety Factors, 446
- 10.9 Summary, 448
 - References, 449
 - Problems and Questions, 450

11 Fatigue Crack Growth, 456

- 11.1 Introduction, 456
- 11.2 Preliminary Discussion, 457
 - 11.2.1 Need for Crack Growth Analysis, 457
 - 11.2.2 Definitions for Fatigue Crack Growth, 459
 - 11.2.3 Describing Fatigue Crack Growth Behavior of Materials, 460
 - 11.2.4 Discussion, 462
- 11.3 Fatigue Crack Growth Rate Testing, 464
 - 11.3.1 Test Methods and Data Analysis, 464
 - 11.3.2 Test Variables, 468
 - 11.3.3 Geometry Independence of da/dN vs. ΔK Curves, 469
- 11.4 Effects of $R = S_{\min}/S_{\max}$ on Fatigue Crack Growth, 470
 - 11.4.1 Effects on ΔK_{th} , 470
 - 11.4.2 The Walker Equation, 471
 - 11.4.3 The Forman Equation, 475
 - 11.4.4 Other Equations, 477
- 11.5 Trends in Fatigue Crack Growth Behavior, 477
 - 11.5.1 Trends with Material, 477
 - 11.5.2 Trends with Temperature and Environment, 480

- 11.6 Life Estimates for Constant Amplitude Loading, 483
 - 11.6.1 Closed Form Solutions, 484
 - 11.6.2 Crack Length at Failure, 488
 - 11.6.3 Solutions by Numerical Integration, 491
- 11.7 Life Estimates for Variable Amplitude Loading, 495
 - 11.7.1 Summation of Crack Increments, 495
 - 11.7.2 Special Method for Repeating or Stationary Histories, 495
 - 11.7.3 Sequence Effects , 497
- 11.8 Design Considerations, 498
- 11.9 Plasticity Aspects and Limitations of LEFM for Fatigue Crack Growth, 501
 - 11.9.1 Plasticity at Crack Tips, 501
 - 11.9.2 Thickness Effects and Plasticity Limitations, 504
 - 11.9.3 Limitations for Small Cracks, 506
- 11.10 Environmental Crack Growth, 508
 - 11.10.1 Life Estimates for Static Loading, 508
 - 11.10.2 Additional Comments, 511
- 11.11 Summary, 514
 - References, 516
 - Problems and Questions, 517

12 Plastic Deformation Behavior and Models for Materials, 525

- 12.1 Introduction, 525
 - 12.1.1 Significance of Plastic Deformation, 525
 - 12.1.2 Preview of Chapter, 526
 - 12.1.3 Additional Comments, 527
- 12.2 Stress-Strain Curves, 528
 - 12.2.1 Elastic, Perfectly Plastic Relationship, 528
 - 12.2.2 Elastic, Linear-Hardening Relationship, 530
 - 12.2.3 Elastic, Power-Hardening Relationship, 531
 - 12.2.4 Ramberg-Osgood Relationship, 532
 - 12.2.5 Rheological Modeling of Nonlinear Hardening, 535
- 12.3 Three-Dimensional Stress-Strain Relationships, 536
 - 12.3.1 Deformation Plasticity Theory, 537
 - 12.3.2 Discussion, 538
 - 12.3.3 The Effective Stress-Strain Curve, 539
 - 12.3.4 Application to Plane Stress, 540
 - 12.3.5 Deformation Versus Incremental Plasticity Theories, 543
- 12.4 Unloading and Cyclic Loading Behavior from Rheological Models, 544

Contents

- 12.4.1 Unloading Behavior, 546
- 12.4.2 Discussion of Unloading, 548
- 12.4.3 Cyclic Loading Behavior, 548
- 12.4.4 Application to Irregular Strain Versus Time Histories, 550
- 12.5 Cyclic Loading Behavior of Real Materials, 552
 - 12.5.1 Cyclic Stress-Strain Tests and Behavior, 552
 - 12.5.2 Cyclic Stress-Strain Curves and Trends, 554
 - 12.5.3 Hysteresis Loop Curve Shapes, 557
 - 12.5.4 Transient Behavior; Mean Stress Relaxation, 560
- 12.6 Summary, 563
 - References, 565
 - Problems and Questions, 566

13 Stress-Strain Analysis of Plastically Deforming Members, 570

- 13.1 Introduction, 570
- 13.2 Plasticity in Bending, 571
 - 13.2.1 Review of Elastic Bending, 571
 - 13.2.2 Plastic Bending Analysis by Integration, 573
 - 13.2.3 Rectangular Cross Sections, 575
 - 13.2.4 Discontinuous Stress-Strain Curves, 576
 - 13.2.5 Ramberg-Osgood Stress-Strain Curve, 578
 - 13.2.6 Combined Axial and Bending Loads, 580
- 13.3 Residual Stresses and Strains for Bending, 584
 - 13.3.1 Rectangular Beam of Elastic, Perfectly Plastic Material, 585
 - 13.3.2 Analysis Extended to the Interior of the Beam, 588
- 13.4 Plasticity of Circular Shafts in Torsion, 589
 - 13.4.1 Stress-Strain Curves for Shear, 590
 - 13.4.2 Analysis of Circular Shafts, 592
- 13.5 Notched Members, 593
 - 13.5.1 Elastic Behavior and Initial Yielding, 593
 - 13.5.2 Fully Plastic Yielding: Rough Estimates, 596
 - 13.5.3 Estimates of Notch Stress and Strain for Local Yielding, 598
 - 13.5.4 Discussion, 600
 - 13.5.5 Residual Stresses at Notches, 601
- 13.6 Cyclic Loading, 605
 - 13.6.1 Bending, 605
 - 13.6.2 Generalized Methodology for Other Cases, 608
 - 13.6.3 Application to Irregular Load vs. Time Histories, 611
 - 13.6.4 Discussion, 613
- 13.7 Summary, 613

- References, *615*
- Problems and Questions, *616*

14 Strain-Based Approach to Fatigue, 621

- 14.1 Introduction, *621*
- 14.2 Strain Versus Life Curves, *623*
 - 14.2.1 Strain-Life Tests and Equations, *623*
 - 14.2.2 Comments on Strain-Life Equations and Curves, *629*
 - 14.2.3 Trends for Engineering Metals, *630*
 - 14.2.4 Factors Affecting Strain-Life Curves; Surface Finish, *633*
- 14.3 Mean Stress Effects, *633*
 - 14.3.1 Mean Stress Tests, *634*
 - 14.3.2 Mean Stress Parameter of Morrow, *634*
 - 14.3.3 Modified Version of the Morrow Approach, *637*
 - 14.3.4 Smith, Watson, and Topper (SWT) Parameter, *638*
 - 14.3.5 Comments on Mean Stress Approaches, *639*
- 14.4 Multiaxial Stress Effects, *641*
 - 14.4.1 Effective Strain Approaches, *641*
 - 14.4.2 Extensions of the Effective Strain Approach, *643*
 - 14.4.3 Critical Plane Approaches, *644*
- 14.5 Life Estimates for Structural Components, *645*
 - 14.5.1 Constant Amplitude Loading, *646*
 - 14.5.2 Irregular Load vs. Time Histories, *650*
 - 14.5.3 Stepwise Procedure for Irregular Load Histories, *652*
 - 14.5.4 Simplified Procedure for Irregular Histories, *658*
- 14.6 Discussion, *659*
 - 14.6.1 Strain-Based Versus Stress-Based Approaches, *660*
 - 14.6.2 Mean Stress and Plasticity Effects, *661*
 - 14.6.3 Sequence Effects Related to Mean Stresses, *662*
 - 14.6.4 Sequence Effects Related to Physical Damage to the Material, *66*
 - 14.6.5 Crack Growth Effects, *665*
- 14.7 Summary, *667*
 - References, *669*
 - Problems and Questions, *670*

15 Time-Dependent Behavior: Creep and Damping, 678

- 15.1 Introduction, *678*
- 15.2 Creep Testing, *680*

Contents

- 15.2.1 Behavior Observed in Creep Tests, 680
- 15.2.2 Representing Creep Test Results, 682
- 15.3 Physical Mechanisms of Creep, 687
 - 15.3.1 Viscous Creep, 688
 - 15.3.2 Creep in Polymers, 689
 - 15.3.3 Diffusional Flow in Crystalline Materials, 690
 - 15.3.4 Dislocation Creep in Crystalline Materials, 691
 - 15.3.5 Evaluation of Activation Energies, 693
 - 15.3.6 Deformation Mechanism Maps, 694
 - 15.3.7 Creep in Concrete, 695
- 15.4 Time-Temperature Parameters and Life Estimates, 696
 - 15.4.1 Sherby-Dorn (*S-D*) Parameter, 697
 - 15.4.2 Larson-Miller (*L-M*) Parameter, 700
 - 15.4.3 Manson-Haferd (*M-H*) Parameter, 702
 - 15.4.4 Discussion, 704
- 15.5 Creep Failure under Varying Stress, 705
 - 15.5.1 Creep Rupture under Step Loading, 705
 - 15.5.2 Creep-Fatigue Interaction, 706
- 15.6 Stress-Strain-Time Relationships, 708
 - 15.6.1 Linear Viscoelasticity, 708
 - 15.6.2 Nonlinear Creep Equations, 711
- 15.7 Creep Deformation under Varying Stress, 714
 - 15.7.1 Recovery of Creep Strain, 714
 - 15.7.2 Stress Relaxation, 715
 - 15.7.3 Step Loading of Linear Viscoelasticity Models, 717
 - 15.7.4 Time-Hardening and Strain-Hardening Rules, 719
- 15.8 Creep under Multiaxial Stress, 721
 - 15.8.1 Creep Deformation under Multiaxial Stress, 721
 - 15.8.2 Creep Failure under Multiaxial Stress, 724
- 15.9 Component Stress-Strain Analysis, 725
 - 15.9.1 Linear Viscoelastic Behavior, 725
 - 15.9.2 Nonlinear Isochronous Stress-Strain Curves, 727
- 15.10 Energy Dissipation (Damping) in Materials, 728
 - 15.10.1 Damping Behavior of Rheological Models, 729
 - 15.10.2 Definitions of Variables Describing Damping, 731
 - 15.10.3 Low Stress Mechanisms in Metals, 732
 - 15.10.4 Additional Mechanisms and Trends, 734
 - 15.10.5 Damping in Engineering Components, 736
- 15.11 Summary, 739
 - 15.11.1 Creep: Introductory Aspects, 739
 - 15.11.2 Creep: Engineering Aspects, 739
 - 15.11.3 Materials Damping, 741
