Preface.....	II	11. Field tests on copper and copper alloys.....	80
1. Introduction.....	1	11.1 Description of the materials.....	80
2. Investigations of underground corrosion.....	2	11.2 Copper and copper-silicon alloys.....	80
2.1 In the United States.....	2	11.3 Copper-zinc and copper-nickel-zinc alloys.....	80
2.2 In foreign countries.....	2	a. Loss in weight and depth of pitting.....	80
3. Characteristics of soils.....	3	b. Effect of dezincification.....	81
3.1 Definition, classification, and mapping.....	3	11.4 Soldered and welded joints in copper.....	87
a. Definition.....	3	12. Field tests of lead, zinc, and aluminum.....	87
b. Classification.....	3	12.1 Description of the materials.....	87
c. Soil mapping.....	7	12.2 Lead.....	87
3.2 Chemical properties.....	7	12.3 Zinc.....	91
3.3 Physical properties.....	8	12.4 Aluminum.....	92
4. Theory and mechanism of corrosion underground.....	9	13. Comparison of the corrosion of ferrous and non-ferrous metals.....	93
4.1 Theory.....	9	14. Effect of interconnecting different metals.....	94
4.2 Factors that affect corrosion underground.....	9	15. Field tests on nonmetallic materials.....	95
a. Aeration.....	10	15.1 Asbestos-cement pipe.....	95
b. Electrolyte.....	10	a. Description of the materials and test procedures.....	95
c. Electrical factors.....	11	b. Mechanical and physical properties of the exposed and unexposed samples.....	98
d. Miscellaneous.....	12	15.2 Wood-fiber pipe.....	107
5. Pitting type of corrosion.....	13	16. Behavior of metallic protective coatings in soils.....	107
6. Correlation of corrosion theory with practice.....	14	16.1 Description of the materials.....	107
7. Investigations by the National Bureau of Standards.....	15	16.2 Zinc-coated (galvanized) steel.....	107
7.1 Scope and methods.....	15	a. Distribution of coating thickness.....	108
a. Field burial investigations.....	15	b. Results of field tests on galvanized coatings.....	110
b. Laboratory investigations.....	18	c. Electrochemical behavior of corrosion of galvanized steel.....	115
7.2 Materials tested.....	18	16.3 Lead-coated steel.....	118
7.3 Soils at the test sites.....	18	16.4 Aluminum-coated (calorized) steel.....	121
8. Field tests of ferrous materials.....	23	16.5 Tin-coated copper.....	121
8.1 Description of the materials.....	23	16.6 Parkway cable.....	123
a. Wrought materials.....	23	17. Field tests on nonbituminous, nonmetallic, and miscellaneous coatings.....	123
b. Cast materials.....	25	17.1 Organic coatings applied to steel.....	123
c. Miscellaneous ferrous materials.....	25	a. Phenolic.....	123
8.2 Results on wrought materials.....	25	b. Rubber and rubberlike coatings.....	124
a. Plain irons and steels.....	25	c. Miscellaneous.....	127
b. Low-alloy irons and steels.....	39	17.2 Porcelain enamel.....	130
c. High-alloy steels.....	49	17.3 Concrete.....	130
8.3 Results on cast materials.....	52	18. Bituminous coatings.....	131
a. Plain cast irons.....	52	18.1 General.....	131
b. Alloy cast irons.....	58	18.2 Requirements of bituminous coatings.....	132
c. High-silicon cast iron.....	63	18.3 Inspection of pipeline coatings.....	133
d. Malleable cast iron.....	64	a. Appearance.....	133
8.4 Comparison of wrought and cast ferrous materials.....	64	b. Pattern and conductance tests.....	133
8.5 Effect of corrosion on bursting strength.....	68	c. Pinhole and flaw detectors.....	133
8.6 Miscellaneous factors in corrosion of ferrous materials.....	70	18.4 Accelerated laboratory tests.....	134
a. Depth of burial.....	70	a. Outdoor soil box.....	134
b. Mill and foundry scale.....	70	b. Moisture absorption and conductance tests.....	135
c. Area effects.....	71	c. Impact test.....	135
d. Pit depth-time relations.....	72	d. Low-temperature test.....	135
9. Engineering significance of results on ferrous materials.....	72	e. Tests of coating reinforcements and shields.....	135
10. Field and laboratory studies of bolt materials.....	74	18.5 Field tests on bituminous coatings.....	136
10.1 Bolts in NBS test sites.....	74	a. NBS coating tests.....	136
10.2 Laboratory studies on the galvanic behavior of bolt materials.....	76	b. NBS-AGA field tests.....	136
10.3 Considerations in bolt replacement.....	78	c. NBS-API tests.....	136
a. Graphitization of cast iron.....	78		
b. Potentials of low-alloy steels.....	78		
c. Effect of exposure on coupling galvanized iron with bare iron.....	79		

	Page		Page
18.6 Performance of bituminous coatings in service.....	149	23.1 General.....	179
19. Accelerated methods for determining corrosivity of soil.....	149	23.2 Criteria of cathodic protection.....	180
19.1 Identification of soil types.....	149	a. Potential.....	180
19.2 Chemical tests.....	153	b. Current.....	180
a. Soluble salts.....	153	23.3 Requirements for the cathodic protection of steel in soils.....	180
b. Hydrogen-ion concentration.....	153	a. Potential of steel in air-free soils.....	180
c. Total acidity.....	154	b. Protection of steel using the potential criterion.....	181
19.3 Oxidation-reduction potential.....	154	c. Interpretation of cathodic polarization curves.....	182
19.4 Soil resistivity.....	155	d. Position of reference electrode in measuring potentials.....	184
a. General.....	155	23.4 Circuits for measurement of protective current.....	185
b. Laboratory methods of measurement.....	155	23.5 Field methods and application of cathodic protection to pipelines.....	186
c. Electrolytic-bridge method.....	156	a. Converted power as current source.....	186
d. Shepard's soil-resistivity apparatus.....	156	b. Use of anodes with external power.....	187
e. Wenner's four-terminal method.....	158	c. Sacrificial anodes as a power source.....	189
f. Radio balance.....	158	d. Behavior of experimental zinc-steel couples underground.....	190
19.5 Methods involving current and potential measurements.....	158	e. Interference problems in cathodic-protection installations.....	194
a. Columbia rod.....	158	f. Cathodic protection of structures other than pipelines.....	194
b. Putman's decomposition potential tests.....	159	g. Status and economics of cathodic protection.....	194
c. Williams-Corfield or nipple-and-can test.....	159	24. References.....	195
19.6 Denison electrolytic corrosion cell.....	160	25. Appendix 1. Cooperators in the National Bureau of Standards underground-corrosion investigations.....	203
a. Experimental methods.....	160	25.1 Advisory organizations.....	203
b. Behavior of different metals in various soils.....	161	25.2 Suppliers of materials.....	203
c. Correlation between results from 6 months in the corrosion cell and 10 years in field exposures.....	164	a. Ferrous.....	203
19.7 Value of soil-corrosivity tests.....	165	b. Nonferrous.....	203
20. Determination of the condition of a pipeline.....	168	c. Coatings.....	203
20.1 Location of the corroding areas on pipelines.....	168	25.3 Suppliers of labor and test sites.....	204
a. Measurement of potentials and currents.....	168	26. Appendix 2. Methods used by the National Bureau of Standards to clean soil-corrosion specimens.....	205
b. Coupons.....	168	26.1 Cleaning of iron and steel specimens.....	205
20.2 Inspection as a means of determining the condition of a pipeline.....	169	26.2 Cleaning of copper and copper-alloy specimens.....	206
21. Stray-current electrolysis.....	171	26.3 Cleaning of lead and lead-coated specimens.....	206
21.1 Surface insulation of pipes as a means of preventing electrolysis.....	171	26.4 Cleaning of zinc and galvanized specimens.....	206
21.2 Electrolysis in concrete.....	171	26.5 Cleaning of nonmetallic-coated specimens.....	206
21.3 Earth resistance and its relation to electrolysis of underground structures.....	173	27. Appendix 3. Recording of data and methods of calculation and of reporting the data.....	207
21.4 Electrolysis and its mitigation.....	173	27.1 Recording of data.....	207
21.5 Studies of electrolysis conditions on typical street-railway systems.....	174	27.2 Methods of calculation and of reporting the data.....	207
21.6 Earth-current meter.....	175	28. Appendix 4. Description of soils at the test sites.....	208
21.7 Effect of alternating current on the electrolytic corrosion of iron and steel.....	175	29. Appendix 5. Modified Denison corrosion cell.....	219
21.8 Leakage resistance of street-railway roadbeds and its relation to electrolysis of underground structures.....	175	30. Appendix 6. Pattern and conductance tests for pipe coatings.....	221
22. Electrical measurements of corrosion rates.....	176	31. Appendix 7. Determination of the total acidity of soils.....	221
22.1 General.....	176	32. Appendix 8. Darnielle's modification of the Hickling apparatus for measuring potentials.....	222
22.2 Theoretical electrical relations.....	176	33. Index.....	223
22.3 Measurement of the rate of corrosion of steel in soils.....	178		
23. Cathodic protection.....	179
