

IUTAM Symposium

The Active Control of Vibration

Edited by C.R.Burrows and P.S. Keogh

CONTENTS

Vibration reduction by active wave control in a strut <i>S.J.Elliott, T.J.Sutton, M.J.Brennan, and R.J.Pinnington</i>	1
Formulation of a composite panel with piezoelectric layers for application to the flutter problem <i>A.Suleman and V.B.Vankayya</i>	9
Active control of vibration using fuzzy game theory <i>S.S.Rao</i>	17
Vibration suppression via eigenstructure assignment and inverse methods <i>D.J.Inman</i>	25
Accurate motion control of an overhead crane <i>J.Swevers, H.van Brussel, Indrawanto, and D.Torfs</i>	33
The dynamics of spreader motion in a mobile crane gantry <i>M.P.Cartmell, L.Morrish, and A.J.Taylor</i>	39
Feedforward compensation of unbalance: new results and application experiences <i>R.Larsonneur and R.J.P.Herzog</i>	45
Robust controller design for attenuation of rotor vibration <i>P.S.Keogh, C.R.Burrows, and C.Mu</i>	53
An active hydraulic bearing for a solid-bowl screw centrifuge <i>J.Althaus, P.Stelter, and B.Feldkamp</i>	61
Hydraulic control of actuator for a high speed rotor <i>T.Jäger and S.Fürst</i>	69
Design and evaluation of two types of active tilting pad journal bearings <i>I.F.Santos</i>	79
A vibration condition monitoring system for large turbogenerators <i>V.M.Fridman, H.M.Khutoretski, B.V.Ryjik, and V.E.Shkolnik</i>	89
Active versus passive control of vehicle suspensions - hardware in the loop experiments <i>K.J.Rieger and W.Schiehlen</i>	93
A practical product implementation of an active/passive vibration isolation system <i>A.M.Beard, A.H.von Flotow, and D.W.Schubert</i>	101
Controller design with observer for the control of elastic joint robots <i>J.Steinle</i>	109
Active control of elastic beam structures <i>T.Frischgesell, K.Popp, T.Szolc, and R.Bogacz</i>	115

Combined position and force control for elastic robots <i>H. Bremer</i>	123
Optimal preview control of two DOF vehicle model <i>S. Senthil and S. Narayanan</i>	131
Design of a selective high frequency band LQG/LTR controller <i>R. van Cauter, B. Verbeure, W. Dehandschutter, and P. Sas</i>	135
On the properties of a preview controlled discrete-time system with use of a state observer - application to a limited-bandwidth suspension <i>G. Prokop and R. Sharp</i>	141
The application of learning automata to advanced suspension control <i>G. P. Frost, T. J. Gordon, and Q. H. Wu</i>	153
Adaptive strategies for active vehicle suspension control <i>F. Yu and D. A. Crolla</i>	161
Self-synchronization of mechanical vibroexciters: control of vibrations, generalized rotors self-balancing principle <i>I. I. Blekhman</i>	169
Active control of chaotic vibrations <i>P. S. Landa</i>	175
Nonlinear problems of power machine dynamics <i>V. M. Fridman</i>	179
Analysis and optimal control of stress amplitudes upon forced vibration of turbomachine impellers with mistuning <i>E. P. Petrov</i>	189
Control of gas content in bubble media by vibration <i>E. B. Kremer</i>	197
Acoustic, vibrational, and aerodynamical methods of turbulent mixing control in subsonic jets <i>A. S. Ginevsky</i>	203
Peculiarities of acoustic loading of air structures in the near sound field of a jet <i>Ye. V. Vlasov</i>	209
Design of actuators for mechanism control <i>H. Ulbrich, Y. X. Wang, and J. Borman</i>	215
A robust model for the discretization of flexible links based on cubic splines <i>K. S. Cho, J. Angeles, and N. Hori</i>	225
Electromagnetic impactor (EMI) for modal testing of structures <i>J. Wassermann, C. Böchzelt, and H. Springer</i>	233
An example of power based active control of vibrations <i>S. Laugesen</i>	241
Vibration control using ER fluids in squeeze-flow: aspects of electrical/mechanical interaction <i>R. Stanway and J. L. Sproston</i>	247

Modelling of active damping for the extensional vibration behaviour of a beam	255
<i>J.A.Rongong, J.R.Wright, G.R.Tomlinson, and R.J.Wynne</i>	
Piezoelectric actuators and sensors	263
<i>M.J.Brennan, M.J.Day, S.J.Elliott, and R.J.Pinnington</i>	
Outlook on the avoidance and attenuation of angular vibrations/oscillations by the use of electro-rheological fluids	275
<i>A.R.Johnson, J.Makin, and W.A.Bullough</i>	
Semi-active control of base-isolated structures	289
<i>T.Fujita</i>	
Application of passive control systems to the seismic retrofit of historical buildings in the United States of America	297
<i>I.G.Buckle</i>	
Innovations in earthquake isolation	307
<i>M.Q.Feng</i>	
New high-sensitivity microaccelerometer technology for vibration control	315
<i>W.J.Kaiser, T.R.Vanzandt, R.Stalder, and W.T.Pike</i>
