CONTROL THEORY

Multivariable and Nonlinear Methods

Torkel Glad and Lennart Ljung

Contents

Preface xi

Notation xiii

1 Introduction 1
- 1.1 Multivariable Systems 2
- 1.2 Nonlinear Systems 5
- 1.3 Discrete and Continuous Time Models and Controllers . 6
- 1.4 Some Basic Concepts in Control 8
- 1.5 Gain and Signal Size 15
- 1.6 Stability and the Small Gain Theorem 18
- 1.7 Comments 22

PART I LINEAR SYSTEMS 25

2 Representation of Linear Systems 27
- 2.1 Impulse Response and Weighting Function 27
- 2.2 Transfer Function Matrices 28
- 2.3 Transfer Operator 30
- 2.4 Input–Output Equations 30
- 2.5 State Space Form 31
- 2.6 Discrete Time Systems 37
- 2.7 Comments 41

3 Properties of Linear Systems 43
- 3.1 Solving the System Equations 43
- 3.2 Controllability and Observability 44
- 3.3 Poles and Zeros 48
- 3.4 Stability 53
- 3.5 Frequency Response and Frequency Functions 58

3.6 Model Reduction 63
3.7 Discrete Time Systems 68
3.8 Comments 77
3A Proofs 79

4 Sampled Data Systems **83**
4.1 Approximating Continuous Time Systems 83
4.2 System Sampling 85
4.3 Poles and Zeros 90
4.4 Controllability and Observability 93
4.5 Frequency Functions 96
4.6 Comments 99

5 Disturbance Models **101**
5.1 Disturbances 101
5.2 Signal Size and Scaling 103
5.3 Spectral Description of Disturbances 106
5.4 Description of Disturbances in the Time Domain 112
5.5 Estimation of One Signal from Another 114
5.6 Measurement and System Disturbances 116
5.7 Observers and Kalman Filters 124
5.8 Discrete Time Systems 131
5.9 Practical Aspects of Signal Sampling 139
5.10 Comments 140
5A Proofs 141

PART II LINEAR CONTROL THEORY **145**

6 The Closed Loop System **147**
6.1 The Transfer Functions of the Closed Loop System . . . 147
6.2 Stability of the Closed System 150
6.3 Sensitivity and Robustness 152
6.4 Specifications 155
6.5 Specifications in the Time Domain 156
6.6 Specifications in the Frequency Domain 159
6.7 Sampled Data Controllers 164
6.8 Comments 169

7 Basic Limitations in Control Design **171**
7.1 Scaling of Variables 171

7.2 Intuitive Analysis 172
7.3 Loop Gain Limitations 176
7.4 S and T: Individual Limitations 179
7.5 Consequences for the System Performance 186
7.6 Effects of Control Signal Bounds 192
7.7 The Multivariable Case 195
7.8 Some Examples 201
7.9 Comments 208
7A Proofs 209

8 Controller Structures and Control Design 215
8.1 Main Ideas 216
8.2 Configuration of Multivariable Controllers 219
8.3 Internal Model Control 228
8.4 Feedback from Reconstructed States 233
8.5 Comments 237

9 Minimization of Quadratic Criteria: LQG 239
9.1 The Criterion and the Main Ideas 239
9.2 The Optimal Controller: Main Results 242
9.3 Some Practical Aspects 247
9.4 Robustness for LQG Controllers 257
9.5 Discrete Time Systems 264
9.6 Comments 271
9A Proofs 273

10 Loop Shaping 277
10.1 Direct Methods 277
10.2 Formalization of the Requirements 278
10.3 Optimal $\mathcal{H}_2$ Control 284
10.4 Optimal $\mathcal{H}_\infty$ Control 285
10.5 Robust Loop Shaping 293
10.6 Discrete Time Systems 300
10.7 Comments 301
10A To Decrease the Spread of the Singular Values 303

PART III NONLINEAR CONTROL THEORY 305

11 Describing Nonlinear Systems 307
11.1 Linear Versus Nonlinear 308

11.2 Examples of Nonlinear Systems 312
11.3 Mathematical Description 314
11.4 Equilibria and Linearization 317
11.5 Comments 319

12 Stability of Nonlinear Systems **321**
12.1 Stability of Equilibria 321
12.2 Stability and Lyapunov Functions 323
12.3 The Circle Criterion 329
12.4 Comments 335
12A Proofs 337

13 Phase Plane Analysis **339**
13.1 Phase Planes for Linear Systems 339
13.2 Phase Planes for Nonlinear Systems 346
13.3 Comments 352

14 Oscillations and Describing Functions **355**
14.1 The Describing Function Method 356
14.2 Computing Amplitude and Frequency of Oscillations . . 360
14.3 Comments 364
14A Some Describing Functions 366

15 Controller Synthesis for Nonlinear Systems **371**
15.1 Linear Design and Nonlinear Verification 371
15.2 Nonlinear Internal Model Control 372
15.3 Parametric Optimization 374
15.4 Other Approaches 377
15.5 State Feedback and Observer 378
15.6 Comments 382

16 Model Predictive Control **383**
16.1 Basic Idea: Predict the Output 383
16.2 k-step Prediction for Linear Systems 384
16.3 The Criterion and the Controller 385
16.4 Comments 391

17 To Compensate Exactly for Nonlinearities **393**
17.1 Examples of Exact Linearization 393
17.2 Relative Degree 395
17.3 Input-Output Linearization 397

17.4 Exact State Linearization 401
17.5 Comments 405

18 Optimal Control 407
18.1 The Goddard Rocket Problem 407
18.2 The Maximum Principle 410
18.3 Solution of the Goddard Rocket Problem 424
18.4 Minimum Time Problems 428
18.5 Optimal Feedback 436
18.6 Numerical Methods 442
18.7 Comments 444
18A Proof of the Maximum Principle 445

19 Some Final Words 451
