Kaddour Najim

Contents

Series Introduction iii
Preface v

I Identification

1 Introduction to Identification 3
1.1 Where are models needed? . . . 3
1.2 What kinds of models are there? . . . 4
1.2.1 Identification vs. first-principle modeling . . . 7
1.3 Steps of identification . . . 8
1.4 Outline of the book . . . 11

2 Linear Regression 13
2.1 Linear systems . . . 13
2.2 Method of least squares . . . 17
2.2.1 Derivation . . . 18
2.2.2 Algorithm . . . 20
2.2.3 Matrix representation . . . 21
2.2.4 Properties . . . 25
2.3 Recursive LS method . . . 28
2.3.1 Derivation . . . 28
2.3.2 Algorithm . . . 31
2.3.3 *A posteriori* prediction error . . . 33
2.4 RLS with exponential forgetting . . . 34
2.4.1 Derivation . . . 36
2.4.2 Algorithm . . . 36
2.5 Kalman filter . . . 37
2.5.1 Derivation . . . 40
2.5.2 Algorithm . . . 42
2.5.3 Kalman filter in parameter estimation . . . 44

3 Linear Dynamic Systems 47
3.1 Transfer function . . . 47
3.1.1 Finite impulse response . . . 47
3.1.2 Transfer function . . . 50

3.2 Deterministic disturbances 53
3.3 Stochastic disturbances 53
3.3.1 Offset in noise 55
3.3.2 Box–Jenkins 55
3.3.3 Autoregressive exogenous 57
3.3.4 Output error 59
3.3.5 Other structures 61
3.3.6 Diophantine equation 66
3.3.7 i-step-ahead predictions 69
3.3.8 Remarks 74

4 Non-linear Systems **77**
4.1 Basis function networks 78
4.1.1 Generalized basis function network 78
4.1.2 Basis functions 79
4.1.3 Function approximation 81
4.2 Non-linear black-box structures 82
4.2.1 Power series 83
4.2.2 Sigmoid neural networks 89
4.2.3 Nearest neighbor methods 95
4.2.4 Fuzzy inference systems 98

5 Non-linear Dynamic Structures **113**
5.1 Non-linear time-series models 114
5.1.1 Gradients of non-linear time-series models 117
5.2 Linear dynamics and static non-linearities 120
5.2.1 Wiener systems 121
5.2.2 Hammerstein systems 124
5.3 Linear dynamics and steady-state models 125
5.3.1 Transfer function with unit steady-state gain 126
5.3.2 Wiener and Hammerstein predictors 126
5.3.3 Gradients of the Wiener and Hammerstein predictors . 128
5.4 Remarks 132
5.4.1 Inverse of Hammerstein and Wiener systems 133
5.4.2 ARX dynamics 134

6 Estimation of Parameters **137**
6.1 Prediction error methods 138
6.1.1 First-order methods 139
6.1.2 Second-order methods 140
6.1.3 Step size 141

6.1.4 Levenberg–Marquardt algorithm . . . 142
6.2 Optimization under constraints . . . 149
6.2.1 Equality constraints . . . 149
6.2.2 Inequality constraints . . . 151
6.3 Guided random search methods . . . 153
6.3.1 Stochastic learning automaton . . . 155
6.4 Simulation examples . . . 159
6.4.1 Pneumatic valve: identification of a Wiener system . . 160
6.4.2 Binary distillation column: identification of Hammerstein model under constraints . . . 167
6.4.3 Two-tank system: Wiener modeling under constraints . 172
6.4.4 Conclusions . . . 176

II Control

7 Predictive Control 181
7.1 Introduction to model-based control . . . 181
7.2 The basic idea . . . 182
7.3 Linear quadratic predictive control . . . 183
7.3.1 Plant and model . . . 184
7.3.2 i-step ahead predictions . . . 185
7.3.3 Cost function . . . 186
7.3.4 Remarks . . . 187
7.3.5 Closed-loop behavior . . . 188
7.4 Generalized predictive control . . . 189
7.4.1 ARMAX/ARIMAX model . . . 190
7.4.2 i-step-ahead predictions . . . 191
7.4.3 Cost function . . . 193
7.4.4 Remarks . . . 195
7.4.5 Closed-loop behavior . . . 197
7.5 Simulation example . . . 197

8 Multivariable Systems 203
8.1 Relative gain array method . . . 204
8.1.1 The basic idea . . . 204
8.1.2 Algorithm . . . 206
8.2 Decoupling of interactions . . . 209
8.2.1 Multivariable PI-controller . . . 210
8.3 Multivariable predictive control . . . 213
8.3.1 State-space model . . . 213

8.3.2 i-step ahead predictions 216
8.3.3 Cost function 217
8.3.4 Remarks 218
8.3.5 Simulation example 219

9 Time-varying and Non-linear Systems 223
9.1 Adaptive control 223
9.1.1 Types of adaptive control 225
9.1.2 Simulation example 228
9.2 Control of Hammerstein and Wiener systems 232
9.2.1 Simulation example 233
9.2.2 Second order Hammerstein systems 242
9.3 Control of non-linear systems 247
9.3.1 Predictive control 248
9.3.2 Sigmoid neural networks 248
9.3.3 Stochastic approximation 252
9.3.4 Control of a fermenter 254
9.3.5 Control of a tubular reactor 266

III Appendices

A State-Space Representation 273
A.1 State-space description 273
A.1.1 Control and observer canonical forms 274
A.2 Controllability and observability 275
A.2.1 Pole placement 276
A.2.2 Observers 280

B Fluidized Bed Combustion 283
B.1 Model of a bubbling fluidized bed 283
B.1.1 Bed 285
B.1.2 Freeboard 286
B.1.3 Power 286
B.1.4 Steady-state 287
B.2 Tuning of the model 288
B.2.1 Initial values 288
B.2.2 Steady-state behavior 288
B.2.3 Dynamics 290
B.2.4 Performance of the model 291
B.3 Linearization of the model 293
