CONTENTS

Foreword	XIII
Preface	XV
Introduction M.P. Glauser and S. Wright	1
Chapter 1. CD14 : a crucial molecule in LPS-induced activation of myeloid cells, R. J. Ulevitch, J. C. Mathison, V. Kravchenko, J. Han, J.-D. Lee, S. Steinemann, J. Gegner, J. Pugin, L. Kline, L. Hatlen, K. Soldau, E. Wolfson, T. Kirkland and P. S. Tobias	5
Chapter 2. LPS-Binding protein (LBP) as a major blood protein presenting LPS to monocytes and its role in monocyte activation, D. Heumann, P. Gallay, J.D. Baumgartner and M.P. Glauser	11
Introduction	
LBP as a major binding protein of LPS in plasma	
Kinetics of LPS binding to human monocytes	
Saturation of LBP with LPS in human plasma	
Parameters involved in TNF α release from human monocytes stimulated with LPS	
Conclusion	
Chapter 3. rBPI₂₃ : a potent bactericidal and anti-endotoxin agent, P.-J. Conlon, H. Gazzano-Santoro, K. Mészáros, K. Huang, J. Watkins, S. Aberle, H. Kasler, D. Fishwild, G. Theofan, A. Horwitz and J. B. Parent	23
Introduction	
Materials and methods	
Results/Discussion	
Conclusions	
Chapter 4. Interaction of bactericidal permeability-increasing protein with lipopolysaccharide and experience in animal models of gram-negative infections, S. M. Opal, M. N. Marra and A. S. Cross	37
Introduction	
Experience with BPI in animal models	
The relevance of animal models to the study of septic shock	
Chapter 5. CD14 A receptor for bacterial lipopolysaccharide, V. Bažil	47
Introduction	
Structure	
Mechanism of soluble CD14 production	
Physiological function	
Conclusions	

Chapter 6. Soluble CD14 and septicin participate in responses of cells to endotoxin,
S. D. Wright 55

Introduction
Both membrane-bound and soluble CD14 participate
in responses of cells to endotoxin
Serum proteins mediate interaction of LPS with CD14
The opsonic activity of serum requires multiple species
and proteolytic activity
The septicin cascade

**Chapter 7. The role of tumor necrosis factor (TNF) in the host defense
mechanisms against infection,**
D. N. Männel and B. Echtenacher 63

Introduction
Detection of TNF during the course of infection
Protective effects of TNF in infection models
Possible mechanisms of TNF-induced protection
Conclusion

**Chapter 8. Studies with anti-tumor necrosis factor antibodies
in experimental animal models and humans,**
J. E. Pennington 71

Introduction
Early studies with anti-TNF antibodies
Recent animal studies
Clinical studies

**Chapter 9. Cell-associated and soluble TNF-receptors :
perspectives for new therapeutic strategies,**
W. Lesslauer, D. Banner, A. D'Arcy, G. Gehr, F. Mackay, R. Gentz, E.-J. Schlaeger,
P. Angehrn, F. Winkler, K. van Zee, L.-L. Moldawer, S. Lowry and H. Loetscher 81

Introduction
The ligand
The receptors and binding proteins
Recombinant soluble TNF receptors as antagonists
Animal studies with sepsis models
Dissection of TNFR55 vs TNFR75 function
Outlook

Chapter 10. Cytokines and antagonists in septic shock,
J. M. Dayer and E. Girardin 91

Introduction
Tumor necrosis factor
Interleukin-1 (IL-1)
The concept of therapy using anticytokines

Chapter 11. Anti-interleukin-1 strategies in the treatment of septic shock syndrome,
Ch A. Dinarello 111

Background
Introduction

IL-1 as a mediator in sepsis
IL-1 relevant to the systemic inflammatory syndrome
Inhibition of synthesis or processing of IL-1
Specific receptor blockade using the IL-1RA
Antibodies to IL-1 receptors
Soluble IL-1 receptors

Chapter 12. Effects of lipopolysaccharide on polymorphonuclear leukocytes,
W. Zimmerli and R. Landmann 123

Introduction
LPS-binding to PMN
Effect of LPS on surface markers of PMN
Effect of LPS on PMN-function
Conclusion

Chapter 13. Cytokines, endothelial cells, and coagulation,
H. ten Cate, S. van Deventer, M. Levi, B. J. Biemond, T. van der Poll, H. R. Büller
and J. W. ten Cate 133

Introduction
Factors inducing procoagulant activity in EC
Biology of TF and its role in extrinsic coagulation
A novel model of coagulation
Remaining questions
Inhibition of the factor VIIa-TF stimulated coagulation system
Cytokines, endothelium, and coagulation *in vivo*
Clinical implications
Therapeutic implications

Chapter 14. The role of platelet-activating factor in sepsis,
J.-F. Dhainaut and J.-P. Mira 147

Introduction
PAF mimicks severe sepsis and organ dysfunction syndrome
PAF production in sepsis
PAF-cytokine auto-generated feedback network in sepsis
Protection of PAF antagonists in sepsis
Conclusion

Index 165
