
HANDBOOK OF

INCINERATION

SYSTEMS

CALVIN R. BRUNNER

CONTENTS

Preface xiii
Acronyms and Abbreviations xv

1. Introduction 1.1

Material Classification 1.2
Liquid or Solid 1.2
Viscosity 1.3
Incinerable Waste 1.4
Standard Industrial Classification 1.4
Disposal Options 1.9
Load Estimating 1.10
Estimating Solid Waste Quality 1.10
References 1.13

2. Regulatory Requirements 2.1

Federal Regulations 2.1
State Particulate Emission Standards 2.2
State Opacity Standards 2.2
The National Ambient Air Quality Standards 2.11
Prevention of Significant Deterioration 2.11
The New-Source Review Process 2.11
Other Requirements 2.15
References 2.15

3. Hazardous Waste 3.1

Background 3.1
Hazardous Waste Classification 3.1
Hazardous Waste Listings 3.3
Ancillary Materials 3.3
Nonhazardous Wastes 3.9
Usable Hazardous Waste 3.16
Quantity Exclusion 3.16
General Considerations 3.17
Hazardous Waste Incineration Regulations 3.17
When Criteria Are Not Available 3.18
PCB Incineration 3.18
Commentary on PCB Incinerator Regulations 3.19
References 3.19

4. Basic Thermodynamics	4.1
<hr/>	
Elemental Laws of Thermodynamics	4.1
Units of Energy	4.1
Enthalpy	4.2
Reaction Temperatures	4.2
The Perfect Gas Law	4.6
A Mixture of Gases	4.7
Air-Moisture Mixtures	4.8
References	4.24
5. Heat-Transfer Systems	5.1
<hr/>	
The Nature of Heat Transfer	5.1
Conduction	5.1
Examples	5.4
Heat Convection	5.5
Radiation	5.6
Combined Heat Transfer	5.6
The Resistance Graph	5.8
Refractory and Insulation	5.14
Materials Description	5.15
Reference	5.18
6. Combustion Calculations	6.1
<hr/>	
Waste Characteristics for Combustion	6.1
Equilibrium Equations	6.1
Air Properties	6.4
Basic Combustion Calculations	6.4
Stoichiometric Burning	6.6
Excess Air	6.6
Excess Air Calculations	6.6
Measurement of Excess Air	6.7
Pyrolysis	6.10
Flue Gas Properties	6.10
References	6.12
7. Air Emissions Calculations	7.1
<hr/>	
The Air	7.1
Inorganic Gas Discharges	7.1
Organic Gas Discharges	7.5
Particulate Discharge	7.5
Smoke	7.6
Generation of Carbon Monoxide	7.7
Generation of Nitrogen Oxides	7.10
Sulfur Oxide Emissions	7.14
Particulate Generation	7.14
Metals Discharges	7.15
Organic Gas Generation	7.15
Refuse Incinerator Emissions	7.16
References	7.16
8. Waste Characteristics	8.1
<hr/>	
Waste Characterization	8.1
Proximate Analysis	8.2
Ultimate Analysis	8.2
Heating Value Measurement	8.2

- Tabular Values 8.3
- Heat of Formation 8.3
- Heating Value Approximation for Hydrocarbons 8.18
- Du Long's Approximation 8.19
- References 8.20

9. Incinerator Analysis 9.1

- Combustion Properties 9.1
- The Mass Balance 9.4
- Heat Balance 9.6
- Flue Gas Discharge 9.12
- Computer Program 9.15

10. On-Site Solid Waste Disposal 10.1

- Solid Waste Incineration 10.1
- Types of Solid Waste Incinerators 10.1
- Open Burning 10.2
- Single-Chamber Incinerators 10.2
- Open-Pit Incinerators 10.3
- Multiple-Chamber Incinerators 10.6
- Solid Waste Incineration Calculations 10.14
- References 10.22

11. Pyrolysis and Controlled Air Incineration 11.1

- General Description 11.1
- Pyrolysis Products 11.1
- The Pyrolysis System 11.2
- Purox® and Torrax® 11.6
- Other Pyrolysis Systems 11.8
- Controlled Air Incineration 11.9
- Theory of Operation 11.9
- Control 11.10
- Incinerable Wastes 11.12
- Air Emissions 11.13
- Waste Charging 11.13
- Ash Disposal 11.14
- Energy Reclamation 11.14
- Typical Systems 11.14
- References 11.16

12. Rotary Kiln Technology 12.1

- Kiln System 12.1
- Kiln Application 12.2
- The Primary Combustion Chamber (Rotary Kiln) 12.4
- Kiln Exhaust Gas Flow 12.5
- Slagging Mode 12.5
- Operation 12.8
- Kiln Seal 12.8
- Liquid Waste Injection 12.9
- System Selection 12.9
- Design Variations 12.10
- Kiln Sizing 12.10
- References 12.13

13. Central Disposal Systems	13.1
<hr/>	
The Need for Central Disposal <i>13.1</i>	
Municipal Solid Waste <i>13.3</i>	
Grate System <i>13.4</i>	
Grate Design <i>13.5</i>	
Associated Disposal Systems <i>13.16</i>	
Fluid Bed Incineration <i>13.16</i>	
Incinerator Corrosion Problems <i>13.18</i>	
Incinerator Refractory Selection <i>13.20</i>	
Heat Recovery or Wasting of Heat <i>13.24</i>	
Resource Recovery Plant Emissions <i>13.25</i>	
References <i>13.27</i>	
14. Biomedical Waste Incineration	14.1
<hr/>	
The Waste Stream <i>14.1</i>	
Regulatory Issues <i>14.3</i>	
Hazardous Waste Incineration <i>14.15</i>	
Combined Hazardous Waste Systems <i>14.15</i>	
Waste Combustion <i>14.15</i>	
Waste Destruction Criteria <i>14.16</i>	
Past Practices <i>14.17</i>	
Starved Air Process Limitations <i>14.17</i>	
References <i>14.18</i>	
15. Sludge Incineration	15.1
<hr/>	
Sludge Incineration Equipment <i>15.1</i>	
The Multiple-Hearth Incinerator <i>15.1</i>	
Fluid Bed Incineration <i>15.5</i>	
The Conveyer Furnace <i>15.9</i>	
Cyclonic Furnace <i>15.10</i>	
Sludge Incinerator Calculations <i>15.14</i>	
Reference <i>15.18</i>	
16. Liquid Waste Destruction	16.1
<hr/>	
Liquid Waste Properties <i>16.1</i>	
Furnace Injection <i>16.2</i>	
Liquid Injection Nozzles <i>16.2</i>	
Liquid Destruction Furnaces <i>16.6</i>	
References <i>16.10</i>	
17. Incineration of Gaseous Waste	17.1
<hr/>	
Combustible Gas <i>17.1</i>	
Flares <i>17.1</i>	
Direct Flame Incineration <i>17.8</i>	
Catalytic Incineration <i>17.15</i>	
References <i>17.20</i>	
18. Incineration of Radioactive Waste	18.1
<hr/>	
Radioactive Waste <i>18.1</i>	
LLW Incineration <i>18.3</i>	
Drum Incinerator <i>18.3</i>	

- Controlled Air Incinerator 18.4
- Agitated Hearth 18.5
- Fluidized Bed Incinerator 18.6
- Electromelter System 18.7
- Other Systems 18.8
- References 18.15

19. Soils Incineration

19.1

- Contaminants 19.1
- Regulatory Issues 19.1
- Mobility 19.2
- Rotary Kiln Systems 19.3
- Conveyer Furnace 19.5
- Circulating Fluid Bed 19.8
- Electric Pyrolyzer 19.9
- High-Temperature Fluid Wall Reactor 19.10
- Site Incineration System Suppliers 19.11

20. Miscellaneous Waste Destruction Processes

20.1

- Molten Salt Incineration 20.1
- Flash Drying 20.4
- The Carver-Greenfield Process 20.4
- Wet Air Oxidation 20.7

21. Energy Recovery

21.1

- Recovering Heat 21.1
- Approach Temperature 21.1
- Available Heat 21.2
- Steam Generation 21.4
- Calculating Steam Generation 21.5
- Waterwall Systems 21.7
- Reference 21.8

22. Air Pollution Control

22.1

- The Control Problem 22.1
- Particle Size 22.2
- Removal Efficiency 22.4
- Air Pollution Control Equipment 22.6
- Equipment Selection 22.6
- Settling Chambers 22.7
- Dry Impingement Separators 22.7
- Dry Cyclonic Separators 22.7
- Wet Collection 22.8
- Liquid Spraying 22.9
- Cyclone Collectors 22.9
- Wet Corrosion 22.10
- Mist Eliminators 22.11
- Gas Scrubbing 22.14
- Cyclonic Scrubber 22.16
- Venturi Scrubber 22.16
- Tray Scrubbers 22.19
- Self-Induced Scrubber 22.20
- Electrostatic Precipitator 22.21

Fabric Filters 22.24
Odor Emissions 22.25
HEPA Filters 22.33
Summary Tables 22.35
References 22.40

23. Acid Gas Control

23.1

Regulatory Requirements for Acid Gas Removal 23.1
Wet Scrubbing 23.1
Dry Scrubbing Systems 23.3
Dry Scrubber Operation 23.3
Flakt 23.4
Teller System 23.6
Nitrogen Oxides Removal 23.10
References 23.11

24. Comprehensive Design Example

24.1

Example 24.1
Criteria 24.1
Incinerator Equipment 24.2
Solid Waste 24.2
Liquid Waste 24.3
Incinerator Calculations 24.5
Particulate Emissions 24.8
Control Equipment 24.10
PSD Evaluation 24.10
Conclusion 24.11

25. Metric Analysis

25.1

SI Units 25.1
Example 25.1
Criteria 25.10
Incinerator Equipment 25.11
Solid Waste 25.13
Liquid Waste 25.15
Incinerator Calculations 25.16
Particulate Emissions 25.18
Control Equipment 25.21
Conclusion 25.22

Glossary G.1
