

Statistics *for*

Environmental Engineers

Second Edition

Paul Mac Berthouex
Linfield C. Brown

LEWIS PUBLISHERS

Table of Contents

1	Environmental Problems and Statistics.....	1
2	A Brief Review of Statistics.....	7
3	Plotting Data.....	25
4	Smoothing Data.....	41
5	Seeing the Shape of a Distribution.....	47
6	External Reference Distributions.....	55
7	Using Transformations.....	61
8	Estimating Percentiles.....	71
9	Accuracy, Bias, and Precision of Measurements.....	77
10	Precision of Calculated Values.....	87
11	Laboratory Quality Assurance.....	97
12	Fundamentals of Process Control Charts.....	103
13	Specialized Control Charts.....	113
14	Limit of Detection.....	119
15	Analyzing Censored Data.....	129
16	Comparing a Mean with a Standard.....	141
17	Paired <i>t</i> -Test for Assessing the Average of Differences.....	147
18	Independent <i>t</i> -Test for Assessing the Difference of Two Averages.....	157
19	Assessing the Difference of Proportions.....	161
20	Multiple Paired Comparisons of <i>k</i> Averages.....	169

21	Tolerance Intervals and Prediction Intervals.....	175
22	Experimental Design.....	185
23	Sizing the Experiment	197
24	Analysis of Variance to Compare k Averages	215
25	Components of Variance.....	223
26	Multiple Factor Analysis of Variance	233
27	Factorial Experimental Designs	239
28	Fractional Factorial Experimental Designs	249
29	Screening of Important Variables	261
30	Analyzing Factorial Experiments by Regression.....	271
31	Correlation	281
32	Serial Correlation	289
33	The Method of Least Squares.....	295
34	Precision of Parameter Estimates in Linear Models.....	303
35	Precision of Parameter Estimates in Nonlinear Models.....	311
36	Calibration	319
37	Weighted Least Squares.....	327
38	Empirical Model Building by Linear Regression	337
39	The Coefficient of Determination, R^2	345
40	Regression Analysis with Categorical Variables.....	355
41	The Effect of Autocorrelation on Regression	365
42	The Iterative Approach to Experimentation	373
43	Seeking Optimum Conditions by Response Surface Methodology	379

44	Designing Experiments for Nonlinear Parameter Estimation	389
45	Why Linearization Can Bias Parameter Estimates	397
46	Fitting Models to Multiresponse Data	403
47	A Problem in Model Discrimination	411
48	Data Adjustment for Process Rationalization	419
49	How Measurement Errors Are Transmitted into Calculated Values	425
50	Using Simulation to Study Statistical Problems	433
51	Introduction to Time Series Modeling	441
52	Transfer Function Models	453
53	Forecasting Time Series	459
54	Intervention Analysis	467
	Appendix — Statistical Tables	477
	Index	481
