

**STRUCTURAL
ANALYSIS &
DESIGN OF
TALL
BUILDINGS**
BUNGLE S. TARANATH

Contents

Preface ix

Chapter 1 General Considerations	1
1.1 Introduction	1
1.2 Definition of a Tall Building	8
1.3 Lateral Load Design Philosophy	8
1.4 Concept of Premium for Height	10
1.5 Relative Structural Cost	12
1.6 Factors Responsible for Slimming Down in the Weight of Structural Frame	13
1.7 Development of High-Rise Architecture	16
1.8 Structural Concepts	22
1.9 Summary	42
Chapter 2 Wind Effects	45
2.1 Design Considerations	45
2.2 Nature of Wind	47
2.3 Extreme Wind Conditions	51
2.4 Characteristics of Wind	54
2.5 Code Wind Loads	65
2.6 Cladding Pressures	84
2.7 Wind Tunnel Engineering	90
Chapter 3 Seismic Design	127
3.1 Introduction	127
3.2 Tall Building Behavior during Earthquakes	134
3.3 Philosophy of Earthquake Design	140
3.4 Static Approach	147
3.5 Dynamic Approach: Spectrum Method	169
3.6 Time History Analysis	180
3.7 Practical Method of Dynamic Analysis	182
3.8 Dynamic Analysis: Theory	186

Chapter 4 Lateral Systems: Steel Buildings	207
4.1 Introduction	207
4.2 Semirigid Frames	211
4.3 Rigid Frames	229
4.4 Braced Frames	233
4.5 Staggered Truss System	235
4.6 Eccentric Bracing Systems	245
4.7 Interacting System of Braced and Rigid Frames	251
4.8 Outrigger and Belt Truss Systems	257
4.9 Framed Tube System	276
4.10 Trussed Tube System	291
4.11 Cellular Tube Structures	298
4.12 Ultimate High-Efficiency Systems	303
Chapter 5 Lateral Systems for Concrete Buildings	311
5.1 Frame Action of Column and Slab Systems	315
5.2 Flat Slab and Shear Walls	318
5.3 Flat Slab, Shear Walls, and Columns	319
5.4 Coupled Shear Walls	320
5.5 Rigid Frame	320
5.6 Widely Spaced Perimeter Tube	321
5.7 Rigid Frame with Haunch Girders	321
5.8 Core-Supported Structures	324
5.9 Shear Wall–Frame Interaction	326
5.10 Frame Tube Structures	336
5.11 Exterior Diagonal Tube	338
5.12 Modular or Bundled Tube	340
Chapter 6 Lateral Systems for Composite Construction	341
6.1 Introduction	341
6.2 Composite Elements	344
6.3 Composite Systems	346
6.4 Case Histories	355
Chapter 7 Gravity System for Steel Buildings	381
7.1 Introduction	381
7.2 Loads	384
7.3 Metal Deck Systems	386
7.4 Open-Web Joist System	391
7.5 Wide-Flange Beams	394
7.6 Columns	396

Chapter 8 Gravity Systems in Concrete Buildings	399
8.1 Floor Systems	400
8.2 Prestressed Concrete Systems	406
Chapter 9 Composite Gravity Systems	421
9.1 Composite Metal Decks	421
9.2 Composite Beams	426
9.3 Composite Haunch Girders	443
9.4 Composite Trusses	445
9.5 Composite Stub Girders	445
9.6 Composite Columns	460
Chapter 10 Structural Analysis and Design	465
10.1 Introduction	465
10.2 Preliminary Hand Calculations	471
10.3 Lumping Techniques	491
10.4 Partial Computer Models	496
10.5 General Computer Analysis Techniques	498
10.6 Special Techniques for Planar Shear Walls	502
10.7 Finite Element Analysis	519
10.8 Warping Torsion of Shear Wall Structures	535
10.9 Suggested Method of Analysis	627
Chapter 11 Special Topics	643
11.1 Differential Shortening Of Columns	644
11.2 Floor-Leveling Problems	660
11.3 Floor Vibrations	662
11.4 Panel Deformation	669
11.5 P- Δ Effects	675
11.6 Cladding Systems	686
11.7 Mechanical Damping Systems	698
11.8 Foundations	700
Selected References	715
Appendix A Conversion Factors: U.S. Customary Units to SI Metric Units	719
Index	721
