

STUDIES IN *FUZZINESS* AND *SOFT COMPUTING*

Ewa Orłowska
Editor

Logic at Work

Physica-Verlag
A Springer-Verlag Company

Table of Contents

<i>Foreword: A tribute to Professor Helena Rasiowa</i> Melvin Fitting	v
<i>Preface</i> Ewa Orłowska	xiii
I LOGIC IN A PHILOSOPHICAL PERSPECTIVE	
<i>Chapter 1 The role of language and logic in Brouwer's work</i> Dirk van Dalen	3
<i>Chapter 2 On new trends in the philosophy of mathematics</i> Roman Murawski	15
<i>Chapter 3 Logic from a metalogical point of view</i> Jan Woleński	25
II ASPECTS OF MODALITY	
<i>Chapter 4 Modal foundations for predicate logic</i> Johan van Benthem	39
<i>Chapter 5 Review of a Carnapian extension of S_5</i> Georg Gottlob	55
<i>Chapter 6 A completeness proof for propositional S_4 in Cantor space</i> Grigori Mints	79
<i>Chapter 7 A fixpoint approach to second-order quantifier elimination with applications to correspondence theory</i> Andreas Nonnengart and Andrzej Szalas	89
<i>Chapter 8 A modal characterization of Peirce algebras</i> Maarten de Rijke	109
<i>Chapter 9 A modal logic of relations</i> Yde Venema and Maarten Marx with Appendix: <i>Mosaics and step-by-step</i> Robin Hirsch, Ian Hodkinson, Maarten Marx, Szabolcs Mikulás and Mark Reynolds	124
<i>Chapter 10 Intuitionistic modal logics as fragments of classical bimodal logics</i> Frank Wolter and Michael Zakharyashev	168

III TOPICS IN MANY-VALUED, INTERMEDIATE AND RELEVANT LOGICS

Chapter 11 <i>Reduction calculi for Post logics</i> Lev Gordeev	187
Chapter 12 <i>On the rule of syllogism for fuzzy implications</i> Siegfried Gottwald	204
Chapter 13 <i>On Prucnal's theorem</i> Dmitrij Skvortsov	222
Chapter 14 <i>Beth's definability theorem in relevant logics</i> Alasdair Urquhart	229

IV LOGIC AND ARITHMETIC

Chapter 15 <i>Non-codability of restricted Σ_1 truth</i> Zofia Adamowicz	237
Chapter 16 <i>Solution of a problem of David Gaspari</i> Dick de Jongh and Duccio Pinnigiani	246
Chapter 17 <i>Interpretations over Heyting's arithmetic</i> Albert Visser	255

V LOGIC AND COMPUTER SCIENCE

Chapter 18 <i>A logic for nondeterministic specifications</i> Marcin Bialasik and Beata Konikowska	287
Chapter 19 <i>Propositional logic, powerdomains and information</i> Chris Brink and Janet Goslett	312
Chapter 20 <i>Disinference rules, model building and abduction</i> Ricardo Caferra and Nicolas Peltier	331
Chapter 21 <i>Relational tableaux for tree models, language models and information networks</i> Wendy MacCaull	354
Chapter 22 <i>Informational representability of models for information logics</i> Stéphane Demri and Ewa Orłowska	383

Chapter 23 <i>An exercise in relational algebra: Reduction in programming languages</i>	
Eric de Kogel and Harrie de Swart	410
Chapter 24 <i>Polarity strategies for resolution logics</i>	
Zbigniew Stachniak	424
VI HANDLING INCONSISTENCY	
Chapter 25 <i>Inconsistency-adapting logics</i>	
Diderik Batens	445
Chapter 26 <i>Some syntactic approaches to the handling of inconsistent knowledge bases: A comparative study Part 2: The prioritized case</i>	
Salem Benferhat, Didier Dubois and Henri Prade	473
Chapter 27 <i>Pseudoconsistent logic: Towards a formal framework for handling contradictions</i>	
Michel De Glas	512
VII METHODOLOGY OF FORMAL SYSTEMS	
Chapter 28 <i>On passing from singular to plural consequences</i>	
Kosta Došen	533
Chapter 29 <i>Ambiguous quantifiers</i>	
Michał Krynicki and Marcin Mostowski	548
Chapter 30 <i>Logics of schemes and admissible rules for first-order theories</i>	
Vladimir V. Rybakov	566
Chapter 31 <i>2-sat is not equivalent to Boolean Prime Ideal Theorem</i>	
Piotr Wojtylak	580
VIII ALGEBRAIC LOGIC	
Chapter 32 <i>Lattices of equational theories of P-compatible varieties</i>	
Katarzyna Halkowska	587
Chapter 33 <i>Rough sets and three-valued structures</i>	
Luisa Iturrioz	596
Chapter 34 <i>Bilinear logic and Grishin algebras</i>	
Joachim Lambek	604

Chapter 35 Relation algebras of formulas 613
 Roger D. Maddux

Chapter 36 Algebraic semantics for predicate logics and their completeness 637
 Hiroakira Ono

Chapter 37 Algebraic models and proof analysis: A simple case study 651
 Piero Paghiani

**Chapter 38 Fork algebras in usual and in non-well-founded set theories
 (an overview)** 669
 Editkó Sain and István Németi
