Table of Contents

Foreword: A tribute to Professor Helena Rasiowa
Melvin Fitting

v

Preface

Ewa Orłowska

xiii

I LOGIC IN A PHILOSOPHICAL PERSPECTIVE

Chapter 1 *The role of language and logic in Brouwer's work*
Dirk van Dalen

3

Chapter 2 *On new trends in the philosophy of mathematics*
Roman Murawski

15

Chapter 3 *Logic from a metalogical point of view*
Jan Woleński

25

II ASPECTS OF MODALITY

Chapter 4 *Modal foundations for predicate logic*
Johan van Benthem

39

Chapter 5 *Review of a Carnapian extension of S_5*
Georg Gottlob

55

Chapter 6 *A completeness proof for propositional S_4 in Cantor space*
Grigori Mints

79

Chapter 7 *A fixpoint approach to second-order quantifier elimination
with applications to correspondence theory*
Andreas Nonnengart and Andrzej Szalas

89

Chapter 8 *A modal characterization of Peirce algebras*
Maarten de Rijke

109

Chapter 9 *A modal logic of relations*
Yde Venema and Maarten Marx

124

with Appendix: *Mosaics and step-by-step*

Robin Hirsch, Ian Hodkinson, Maarten Marx, Szabolcs Mikulas and
Mark Reynolds

Chapter 10 *Intuitionistic modal logics as fragments of classical bimodal logics*
Frank Wolter and Michael Zakharyashev

168

III TOPICS IN MANY-VALUED, INTERMEDIATE AND RELEVANT LOGICS

- Chapter 11 *Reduction calculi for Post logics* 187
 Lev Gordeev
- Chapter 12 *On the rule of syllogism for fuzzy implications* 204
 Siegfried Gottwald
- Chapter 13 *On Prucnal's theorem* 222
 Dmitrij Skvortsov
- Chapter 14 *Beth's definability theorem in relevant logics* 229
 Alasdair Urquhart

IV LOGIC AND ARITHMETIC

- Chapter 15 *Non-codability of restricted Σ_1 truth* 237
 Zofia Adamowicz
- Chapter 16 *Solution of a problem of David Gaspari* 246
 Dick de Jongh and Duccio Pianigiani
- Chapter 17 *Interpretations over Heyting's arithmetic* 255
 Albert Visser

V LOGIC AND COMPUTER SCIENCE

- Chapter 18 *A logic for nondeterministic specifications* 287
 Marcin Białasik and Beata Konikowska
- Chapter 19 *Propositional logic, powerdomains and information* 312
 Chris Brink and Janet Goslett
- Chapter 20 *Disinference rules, model building and abduction* 331
 Ricardo Caferra and Nicolas Peltier
- Chapter 21 *Relational tableaux for tree models, language models and information networks* 354
 Wendy MacCaull
- Chapter 22 *Informational representability of models for information logics* 383
 Stéphane Demri and Ewa Orłowska

Chapter 23 <i>An exercise in relational algebra: Reduction in programming languages</i>	
Eric de Kogel and Harrie de Swart	410
Chapter 24 <i>Polarity strategies for resolution logics</i>	
Zbigniew Stachniak	424
VI HANDLING INCONSISTENCY	
Chapter 25 <i>Inconsistency-adaptive logics</i>	
Diderik Batens	445
Chapter 26 <i>Some syntactic approaches to the handling of inconsistent knowledge bases: A comparative study Part 2: The prioritized case</i>	
Salem Benferhat, Didier Dubois and Henri Prade	473
Chapter 27 <i>Pseudoconsistent logic: Towards a formal framework for handling contradictions</i>	
Michel De Glas	512
VII METHODOLOGY OF FORMAL SYSTEMS	
Chapter 28 <i>On passing from singular to plural consequences</i>	
Kosta Došen	533
Chapter 29 <i>Ambiguous quantifiers</i>	
Michał Krynicki and Marcin Mostowski	548
Chapter 30 <i>Logics of schemes and admissible rules for first-order theories</i>	
Vladimir V. Rybakov	566
Chapter 31 <i>2-sat is not equivalent to Boolean Prime Ideal Theorem</i>	
Piotr Wojtylak	580
VIII ALGEBRAIC LOGIC	
Chapter 32 <i>Lattices of equational theories of P-compatible varieties</i>	
Katarzyna Halkowska	587
Chapter 33 <i>Rough sets and three-valued structures</i>	
Luisa Iturrioz	596
Chapter 34 <i>Bilinear logic and Grishin algebras</i>	
Joachim Lambek	604

Chapter 35 <i>Relation algebras of formulas</i> Roger D. Maddux	613
Chapter 36 <i>Algebraic semantics for predicate logics and their completeness</i> Hiroakira Ono	637
Chapter 37 <i>Algebraic models and proof analysis: A simple case study</i> Piero Pagliani	651
Chapter 38 <i>Fork algebras in usual and in non-well-founded set theories (an overview)</i> Ildikó Sain and István Németi	669
