Contents

Preface	xv
1 Systems and Models	1
1.1 What is simulation?	1
1.1.1 What is a system?	1
1.1.2 What is a model?	2
1.2 Hierarchy of models	2
1.2.1 Physical (replica models)	2
1.2.2 Abstract (mathematical models)	3
1.3 Model characteristics	4
1.4 How to use this book	6
1.5 References	8
2 Overview of Simulation	9
2.1 What is simulation? Why do we need it?	9
2.1.1 Simulation's role in engineering design	9
2.1.2 Testing for safety	9
2.1.3 Option testing	10
2.2 A short history of simulation practice	10
2.3 Simulation software: programs, packages or languages?	13
2.4 Simulation structure	15
2.4.1 The game of MONOPOLY™ – a discrete model	15
2.4.2 Arcade games – continuous models?	16
2.4.3 Simulation structure in general	16
2.5 Methodical approach to a simulation project	17
2.5.1 Model development	18
2.5.2 Model testing	19
2.5.3 Exploiting the model	20
2.6 World dynamics – a prediction of the future for mankind	21
2.6.1 A short history	21

2.6.2	<i>A brief description of the world models</i>	22
2.6.3	<i>WORLD3 model development</i>	24
2.6.4	<i>WORLD3 model 'Standard Run'</i>	24
2.6.5	<i>Experimenting with the WORLD3 model</i>	26
2.7	References	30
3	Discrete Simulation	31
3.1	Discrete simulation concepts	31
3.1.1	<i>Elements of a discrete model</i>	31
3.1.2	<i>Dynamics of a discrete model</i>	32
3.2	The different modelling approaches in discrete simulation	32
3.2.1	<i>Entity-oriented (process interaction) models</i>	33
3.2.2	<i>Event-based modelling</i>	34
3.2.3	<i>Activity cycles</i>	37
3.3	Discrete simulation software – the building blocks	39
3.3.1	<i>Model definition and set-up</i>	39
3.3.2	<i>Statistical distributions</i>	40
3.3.2.1	<i>General probability concepts</i>	41
3.3.2.2	<i>Uniform (rectangular) distribution</i>	42
3.3.2.3	<i>Triangular distribution</i>	44
3.3.2.4	<i>Binomial distribution</i>	45
3.3.2.5	<i>Poisson distribution</i>	46
3.3.2.6	<i>Negative-exponential distribution</i>	48
3.3.2.7	<i>Normal or Gaussian distribution</i>	51
3.3.2.8	<i>Log-normal distribution</i>	53
3.3.3	<i>Time advance</i>	55
3.4	References	56
4	Analog and Hybrid Computation	57
4.1	Introduction to analog computation	57
4.1.1	<i>The operational amplifier</i>	58
4.2	Components of the parallel logic analog computer	60
4.2.1	<i>Analog components</i>	60
4.2.1.1	<i>Linear analog computer components</i>	60
4.2.1.2	<i>Non-linear components</i>	67
4.2.2	<i>Logic components</i>	68
4.2.3	<i>Interface components</i>	69
4.3	Simulation structure for analog computation	69
4.3.1	<i>Model implementation and initialization</i>	72
4.3.1.1	<i>Second-order differential equations</i>	72
4.3.1.2	<i>Two-point boundary-value problem (bending beam)</i>	75
4.3.2	<i>Generating the transients</i>	78
4.3.3	<i>At the end of a run</i>	79

4.4	Introduction to hybrid computers	79
4.4.1	<i>Hybrid computer architecture</i>	80
4.4.2	<i>Digital software aids</i>	82
4.4.3	<i>Model partitioning on a hybrid computer</i>	83
4.5	References	84
5	Digital Computation for Continuous Simulation	85
5.1	Characteristics of continuous models	85
5.1.1	<i>Differential equations</i>	85
5.1.2	<i>Algebraic equations</i>	86
5.1.3	<i>Arbitrary functions</i>	86
5.1.4	<i>Special non-linear functions</i>	87
5.1.5	<i>Transfer functions</i>	87
5.2	Model manipulation for general-purpose implementation	88
5.3	User interaction	92
5.4	Comprehensive use of graphics	93
5.4.1	<i>Run-time graphics</i>	93
5.4.2	<i>Post-run graphics</i>	94
5.4.3	<i>Special forms of graphics</i>	94
5.5	Simulation structure for digital computation	95
5.5.1	<i>Model set-up and initialization</i>	95
5.5.2	<i>Getting the model to run</i>	95
5.5.3	<i>Checking and analyzing the results</i>	97
5.6	Implementation problems not found with analog computation	97
5.6.1	<i>Digital computation coding sequence</i>	98
5.6.2	<i>Numerical integration algorithms</i>	100
5.6.3	<i>Discontinuities</i>	100
5.6.4	<i>'Stiffness' in sets of differential equations</i>	100
5.7	Example: a simple continuous feedback system	100
5.7.1	<i>The model</i>	100
5.7.2	<i>Simulation results</i>	102
5.8	Example: a simulation model for the dynamics of a whale population and its exploitation	106
5.8.1	<i>Modelling concepts</i>	106
5.8.2	<i>Running the model</i>	108
5.8.3	<i>Exercises</i>	109
5.9	Example: the bending beam problem (again)	110
5.9.1	<i>The model</i>	110
5.9.2	<i>Simulation results</i>	113
5.10	Reference	113
6	Numerical Analysis for Digital Simulation	114
6.1	What do we mean by numerical integration?	114

6.1.1	<i>Taylor series as the starting point</i>	114
6.1.2	<i>Single-step integration methods</i>	116
6.1.3	<i>Multiple step methods</i>	122
6.2	Step size control for numerical integration	124
6.2.1	<i>Fixed step integration – useful for some applications, but beware!</i>	124
6.2.2	<i>Why vary the step size?</i>	125
6.2.3	<i>Error control in numerical integration</i>	125
6.2.3.1	<i>Binary adjustment of step size</i>	125
6.2.3.2	<i>Continuous adjustment</i>	126
6.2.3.3	<i>Error criteria as set by the user</i>	127
6.3	The numerical analysis of ‘stiffness’	128
6.4	Which do we solve, ODEs or DAEs?	130
6.5	References	136
7	Discontinuities in Digital Simulation	138
7.1	The effects of discontinuities on numerical integration	138
7.1.1	<i>Single-step integration algorithms</i>	138
7.1.2	<i>Multiple step methods</i>	139
7.1.3	<i>Example: sawtooth generation</i>	141
7.2	Alleviating discontinuity effects	145
7.2.1	<i>Single-step methods</i>	145
7.2.2	<i>Multiple step methods</i>	145
7.2.3	<i>Locating discontinuities</i>	145
7.2.4	<i>Sawtooth generation – an event-based approach</i>	148
7.3	References	150
8	Digital Simulation of Sampled-Data Control Systems	151
8.1	Introduction	151
8.2	Discontinuities introduced by sampled-data systems	151
8.3	Event processing for sampled-data system simulation	153
8.4	A simple sampled-data control system	156
8.5	Multirate sampled-data systems	158
8.5.1	<i>Digital simulation of cyclic sampling</i>	162
8.6	Application to computer control problems	164
8.7	Example: multirate sampled-data system	165
8.8	Example: multirate sampled-data system with noise	170
8.9	Conclusions	173
8.10	References	174
9	Distributed-Parameter Systems	175
9.1	Partial differential equation models	175

9.2	Discretization: conversion of PDEs to ODEs	175
9.3	Stability problems	181
9.4	Initial and boundary values	181
9.5	Simple simulation example	184
9.6	References	196
10	Case Study: Simulation of Direct Digital Computer Control	197
10.1	Introduction	197
10.2	A lumped-parameter model of the gas temperature control system	199
10.2.1	<i>Model equations</i>	200
10.3	Running the simulation	208
10.3.1	<i>Steady-state properties of the model</i>	208
10.3.2	<i>System response to a disturbance in coolant gas flow</i>	211
10.3.3	<i>Improving output quality</i>	214
10.3.4	<i>System response to reactivity disturbance</i>	216
10.4	Improved solution using event processing	217
10.4.1	<i>Alterations to the model</i>	218
10.4.2	<i>The gas flow disturbance re-visited</i>	219
10.4.3	<i>Check on the reactivity disturbance</i>	221
10.5	Conclusions	222
11	Case Study: Simulation of a Distributed-Parameter System	224
11.1	Introduction	224
11.2	Modelling the process	225
11.2.1	<i>Working equations for the model</i>	226
11.2.2	<i>Initial and boundary conditions</i>	228
11.2.3	<i>Finite-difference schemes</i>	231
11.3	Model implementation	234
11.3.1	<i>Radial heat transfer</i>	234
11.3.2	<i>Introduction of reaction dynamics</i>	241
11.3.3	<i>Control of exothermic reaction</i>	244
11.3.4	<i>Introduction of endothermic reaction</i>	246
11.3.5	<i>Control adjustments</i>	250
11.4	Conclusions	257
11.5	References	257
12	Simulation: Which Way Now?	258
12.1	Hardware and software trends	258
12.1.1	<i>Future directions in simulation hardware development</i>	258
12.1.2	<i>Future advances in simulation software</i>	259
12.1.3	<i>The graphical user interface and model definition</i>	260

12.1.4	<i>Example: simple glucose metabolism model</i>	261
12.2	Parallel processing	267
12.3	Simulation and 'artificial intelligence'	269
12.4	Epilogue	269
12.5	Bibliography	270
Appendix A.1 ACSL Models Used in this Book		271
A.1.1	BEAM.CSL	271
A.1.2	BEAM.CMD	274
A.1.3	CONTIN.CSL	274
A.1.4	CONTIN.CMD	275
A.1.5	DDC1.CSL	276
A.1.6	DDC1.CMD	279
A.1.7	DDC2.CSL	281
A.1.8	DDC2.CMD	285
A.1.9	HEATBAR.CSL	287
A.1.10	HEATBAR.CMD	289
A.1.11	MULTR.CSL	290
A.1.12	MULTR.CMD	291
A.1.13	MULTN.CSL	292
A.1.14	MULTN.CMD	294
A.1.15	REACTOR.CSL	294
A.1.16	REACTOR.CMD	302
A.1.17	SAMPLE.CSL	303
A.1.18	SAMPLE.CMD	303
A.1.19	SAWTL.CSL	304
A.1.20	SAWTL.CMD	305
A.1.21	SAWTEV.CSL	306
A.1.22	SAWTEV.CMD	306
A.1.23	WHALE.CSL	307
A.1.24	WHALE.CMD	308
Appendix A.2 MATSIM Models Used in this Book		309
A.2.1	BEAMIN.M	309
A.2.2	BEAMB.M	310
A.2.3	CONTIN.M	311
A.2.4	CONTB.M	312
A.2.5	HLIMIT.M	313
A.2.6	MULTRIN.M	313
A.2.7	MULTRB.M	314
A.2.8	MULTNIN.M	315
A.2.9	MULTNB.M	316
A.2.10	SAMPIN.M	317

A.2.11 SAMPB.M	318
A.2.12 SAWTUNIN.M	319
A.2.13 SAWTUNB.M	320
A.2.14 SAWTEVIN.M	320
A.2.15 SAWTEVB.M	321
Appendix A.3 MATSIM Simulation Routines	322
A.3.1 DYNAMB.M	322
A.3.2 DECODE.M	323
A.3.3 ODE23B.M	324
A.3.4 OUTPUT.M	325
Index	327
