Contents

Preface	ix	
Acknowledgments	xiii	
1. Statistics, experiments, and data		
1.1.	Experiments and observations	3
1.2.	Random variables and sampling	5
1.3.	Displaying data	6
1.4.	Summarizing data numerically	10
1.4.1.	Measures of location	11
1.4.2.	Measures of spread	13
1.4.3.	More than one variable: Correlation	17
1.5.	Large samples	20
1.6.	Experimental errors	23
Problems 1		26
2. Probability		
2.1.	Sample spaces and events	29
2.2.	Axioms and calculus of probability	31
2.3.	Conditional and marginal probabilities	33
2.4.	Permutations and combinations	36
2.5.	The meaning of probability	38
2.5.1.	Frequency interpretation	38
2.5.2.	Subjective interpretation	40
Problems 2		44
3. Probability distributions I: Basic concepts		
3.1.	Random variables	47
3.2.	Single variable	48
3.2.1.	Probability distributions	48
3.2.2.	Expectation values	53
3.2.3.	Moment-generating and characteristic functions	54
3.3.	Several variables	58
3.3.1.	Joint probability distributions	58
3.3.2.	Marginal and conditional distributions	59
3.3.3.	Expectation values of sums and products	63
3.3.4.	Moments and expectation values	64
3.4.	Functions of a random variable	65
Problems 3		69
4. Probability distributions II: Examples		
4.1.	Continuous variables	73
4.1.1.	Uniform distribution	73
4.1.2.	Univariate normal (Gaussian) distribution	75
4.1.3.	Multivariate normal distribution	81
4.1.4.	Bivariate normal distribution	83
4.1.5.	Exponential and gamma distributions	84
4.1.6.	Cauchy distribution	87
4.2.	Discrete variables	89
4.2.1.	Binomial distribution	89
4.2.2.	Multinomial distribution	94
4.2.3.	Poisson distribution	96
Problems 4		101
5. Sampling and estimation		
5.1.	Random samples and estimators	105
5.1.1.	Sampling distributions	106
5.1.2.	Properties of point estimators	108
5.2.	Estimators for the mean, variance, and covariance	112
5.3.	Laws of large numbers and the central limit theorem	115
5.4.	Experimental errors	120
5.4.1.	Propagation of errors	122
5.5.	Monte Carlo method and simulations	126
5.5.1.	Monte Carlo method for integration	126
5.5.2.	Simulation	131
Problems 5		139

6. Sampling distributions associated with the normal distribution	9.3. Normal distribution 238
6.1. Chi-squared distribution 143	9.3.1. Confidence intervals for the mean 238
6.2. Student's <i>t</i> distribution 151	9.3.2. Confidence intervals for the variance 241
6.3. F distribution 157	9.3.3. Confidence interval for a ratio of variances 243
6.4. Relations between χ^2 , <i>t</i> , and <i>F</i> distributions 160	9.3.4. Confidence regions for the mean and variance 243
Problems 6 163	9.4. Poisson distribution 244
7. Parameter estimation I: Maximum likelihood and minimum variance	9.5. Large samples 246
7.1. Estimation of a single parameter 168	9.6. Confidence intervals near boundaries 249
7.2. Variance of an estimator 174	9.7. Bayesian confidence intervals 250
7.2.1. Approximate methods 176	Problems 9 252
7.3. Simultaneous estimation of several parameters 180	10. Hypothesis testing I: Parameters
7.4. Minimum variance 182	10.1. Statistical hypotheses 256
7.4.1. Parameter estimation 183	10.2. General hypotheses: Likelihood ratios 260
7.4.2. Minimum variance bound 184	10.2.1. Simple hypothesis: One simple alternative 260
Problems 7 190	10.2.2. Composite hypotheses 264
8. Parameter estimation II: Least-squares and other methods	10.3. Normal distribution 267
8.1. Unconstrained linear least-squares 193	10.3.1. Basic ideas 267
8.1.1. General solution for the parameters 195	10.3.2. Specific tests 269
8.1.2. Errors on the parameter estimates 201	10.4. Other distributions 277
8.1.3. Quality of the fit 204	10.5. Analysis of variance 279
8.1.4. Orthogonal polynomials 206	10.6. Bayesian hypothesis testing 283
8.1.5. Fitting a straight line 208	Problems 10 287
8.1.6. Combining experimental data 212	11. Hypothesis testing II: Other tests
8.2. Linear least-squares with constraints 213	11.1. Goodness-of-fit tests 289
8.3. Nonlinear least-squares 217	11.1.1. Discrete distributions 290
8.4. Other methods 218	11.1.2. Continuous distributions 294
8.4.1. Minimum chi-square 218	11.1.3. Linear hypotheses 298
8.4.2. Method of moments 220	11.2. Tests for independence 301
8.4.3. Bayes' estimators 223	11.3. Nonparametric tests 303
Problems 8 227	11.3.1. Sign test 303
9. Interval estimation	11.3.2. Signed-rank test 305
9.1. Confidence intervals: Basic ideas 231	11.3.3. Rank-sum test 306
9.2. Confidence intervals: General method 235	11.3.4. Run test 308
	11.3.5. Rank correlation coefficient 310
	Problems 11 311

Appendix A. Miscellaneous mathematics 315	Appendix C. Statistical tables 335
A.1. Matrix algebra 315	C.1. Normal distribution 335
A.2. Classical theory of minima 319	C.2. Binomial distribution 337
A.3. Delta function 321	C.3. Poisson distribution 345
A.4. Distribution of the mean of a Poisson sample 323	C.4. χ^2 distribution 352
A.5. The Chebyshev inequality 323	C.5. Student's t distribution 355
Appendix B. Optimization of nonlinear functions 325	C.6. F distribution 356
B.1. General principles 325	C.7. Signed-rank test 363
B.2. Unconstrained minimization of functions of one variable 329	C.8. Rank-sum test 364
B.3. Unconstrained minimization of multivariable functions 330	C.9. Run test 365
B.3.1. Direct search methods 330	C.10. Rank correlation coefficient 368
B.3.2. Gradient methods 331	
B.4. Constrained optimization 332	
	Appendix D. Answers to selected problems 371
	Bibliography 383
	Index 385
