

Elmar Bollin *Editor*

Using Renewable Energies in Buildings

Heating and Cooling Supply, Automation,
Executed Examples

 Springer Vieweg

Editor

Elmar Bollin
Faculty of Mechanical and Process Engineering
Offenburg University of Applied Sciences
Baden-Württemberg, Germany

With Contrib. by

Martin Becker
Biberach University of Applied Sciences
Biberach, Germany

Ekkehard Boggasch
Department of Supply Engineering
Ostfalia University of Applied Sciences
Wolfenbüttel, Germany

Elmar Bollin
Faculty of Mechanical and Process
Engineering
Offenburg University of Applied Sciences
Baden-Württemberg, Germany

Mathias Fraaß
Department IV, Architecture and Building
Technology
Beuth University of Applied Sciences Berlin
Berlin, Germany

Alfred Karbach
Fachbereich Maschinenbau und
Energietechnik, TH Mittelhessen
Gießen, Germany

Peter Ritzenhoff
Bremerhaven University of Applied Sciences
Bremerhaven, Germany

Dieter Striebel
Esslingen University of Applied Sciences
Esslingen, Germany

ISBN 978-3-658-41124-4 ISBN 978-3-658-41125-1 (eBook)
<https://doi.org/10.1007/978-3-658-41125-1>

The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content.

Contents

1	Introduction to the Use of Renewable Energy Sources	1
	Elmar Bollin	
1.1	General Information on the Use of Renewable Energy Sources	1
1.2	Characteristics of Renewable Energy Sources	3
1.3	Importance of Automation in the Use of Renewable Energy Sources for the Heating and Cooling Supply of Buildings	4
1.4	Example of Solar Thermal Domestic Tap Water Heating in a Detached House	6
2	Basics of the Use of Regenerative Energy Sources in Buildings	9
	Peter Ritzenhoff and Alfred Karbach	
2.1	Energy Supply from Renewable Energy Sources	10
2.1.1	The Solar Radiation Supply at the Building	10
2.1.2	Potentials of Near-Surface Geothermal Energy	24
2.1.3	Potential of Ambient Heat	29
2.1.4	Sensors for Climate Measurement (Meteorological Measurement Technology)	30
2.2	Building Energy Demand	32
2.2.1	Building Heat Demand	34
2.2.2	Cooling Demand of Buildings	39
2.2.3	Fresh Air Demand in Buildings	41
2.2.4	Drinking Water Demand in Buildings	43
2.3	Special Features of the Use of Renewable Energy Sources	43
2.3.1	Influence of the Variable Energy Supply	45
2.3.2	Supply and Demand	48
2.3.3	Multivalent Energy Supply	51
2.3.4	Yield and Function Control	52
	References	54

3	Energy Supply from Renewable Energy Sources	57
	Elmar Bollin, Dieter Striebel, Martin Becker, and Peter Ritzenhoff	
3.1	Solar Thermal Converters	57
3.1.1	Introduction	58
3.1.2	The Solar Collector	60
3.1.3	Time Response of the Solar Collector	61
3.1.4	Important Characteristics of Solar Collectors	63
3.1.5	Hydraulic Characteristics of the Solar Collector	65
3.2	Systems for Geothermal Energy Exploitation	68
3.2.1	General	68
3.2.2	Geothermal Collectors	69
3.2.3	Borehole Heat Exchangers	70
3.3	Refrigeration Machines and Heat Pumps	73
3.3.1	General	73
3.3.2	Definition of an Overall Refrigeration System from the Point of View of Automation Technology	74
3.3.3	Fundamentals of Compression Refrigeration Machines	75
3.3.4	Basics of Absorption and Adsorption Chillers	80
3.3.5	Energy Parameters of Refrigeration Systems and Heat Pumps	90
	References	95
4	Thermal Storage Systems	97
	Dieter Striebel	
4.1	Function of Thermal Storage Systems	97
4.2	Possibilities for Storing Heat	99
4.2.1	Storage of Sensible Heat	99
4.2.2	Latent Heat Storage System	101
4.2.3	Sorption Storage Tank	103
4.3	Storage Tanks with Water as Storage Medium	103
4.3.1	Flow and Stratification Processes in the Storage Tank	103
4.3.2	Charging and Discharging Equipment	104
4.3.3	Heat Losses	106
4.3.4	Dimensioning of Storage Tanks	106
4.3.5	Hydraulic Integration of the Displacement Storage Tank	108
4.3.6	Control of Charging and Discharging	109
4.3.7	Combined Storage Tank	110
	References	112

5	Automation of Systems for Heat and Cold Supply from Renewable Energy Sources	113
	Elmar Bollin, Mathias Fraaß, Alfred Karbach, Martin Becker, and Dieter Striebel	
5.1	Solar Domestic Hot Water Heating	114
5.1.1	Small-Scale Systems for Solar Domestic Hot Water Heating DHW	114
5.1.2	Large-Scale Systems for Solar Domestic Hot Water Heating (DHW Heating)	115
5.1.2.1	Collector Circuit Control	116
5.1.2.2	Storage Charging Circuitry	120
5.1.2.3	Storage Discharge Circuitries	122
5.1.2.4	Monitoring and Service Functions	126
5.1.2.5	Thermal Legionella Disinfection	126
5.1.3	Example of a Large-Scale Solar Thermal System in Operation	127
5.2	Solar-Assisted Space Heating of Buildings	135
5.3	Behaviour of Buildings	137
5.3.1	Introduction	137
5.3.2	Energy Flow in Building with Respect to Space Heating	138
5.3.2.1	Utility and Demand	138
5.3.2.2	Expenditure and Energy Efficiency	140
5.3.3	Modelling of Room's Behaviour	141
5.3.3.1	Room Characteristic and Room Temperature Control	141
5.3.3.2	Single Node Model	144
5.3.3.3	Two-Node Model	147
5.3.3.4	Effective Heat Capacity	149
5.3.3.5	Multi-Node Model	152
5.3.3.6	Geometric Space Models	155
5.3.4	Thermally Activated Building Systems TABS	160
5.3.4.1	Thermally Activated Construction Elements	160
5.3.4.2	Concrete Core Activation	162
5.3.4.3	Cooling with TABS	163
5.3.5	Low Cost Bus (LCB)	164
5.3.5.1	Structure	164
5.3.5.2	CAFM Functionality	165
5.3.5.3	Energy Saving Through Improved Regulation	166
5.3.5.4	Energy Saving Through Interaction with Users	168
5.4	Solar Cooling	168
5.4.1	Desiccative and Evaporative Cooling Systems (DEC)	172
5.4.2	Solar-Powered Absorption Chillers	174

5.4.2.1	Solar Absorption Cooling as an Implemented System Example	175
5.4.2.2	Solar-Powered Adsorption Machine as an Implemented System Example	182
5.5	Heat Pump Systems for Heating Buildings	185
5.5.1	System Differentiation Heat Pump, Heat Pump System and Heat Pump Heating System	185
5.5.2	Energy Evaluation of Heat Pumps and Heat Pump Systems	188
5.5.3	Components of a Heat Pump Plant (HPP)	193
5.5.3.1	Heat Sources	193
5.5.3.2	Heat Pump (HP)	195
5.5.3.3	Operating Modes of a Heat Pump Heating System (HPHS)	196
5.5.4	Automation of Heat Pumps and Heat Pump Heating Systems	198
5.5.4.1	Automation Levels	198
5.5.4.2	Automation of Heat Pump Systems	200
5.6	Geothermal Systems for Heating and Cooling Buildings (System Example)	201
5.6.1	Concept and Structure	202
5.6.2	Control Strategies	202
5.6.3	Operational Experience	206
5.7	Automation Strategies for Thermally Activatable Building Systems (TABS)	208
5.7.1	General	208
5.7.2	Overview of Typical Control Strategies for TABS	209
5.7.2.1	Charging the TABS with a Constant Flow Temperature	210
5.7.2.2	Control of the TABS Flow Temperature as a Function of the Ambient Temperature	210
5.7.2.3	Control by Temperature in TABS	212
5.7.2.4	Control of the Mass Flow Rate	213
5.7.2.5	Predictive and Forecast-Driven Strategies	214
References	216
6	Function Monitoring and Yield Control	219
	Alfred Karbach and Ekkehard Boggasch	
6.1	Monitoring	220
6.1.1	Key Performance Indicators (KPI) for the Evaluation of Plant Operation	224
6.2	System Simulation and Forecasting Tools	226
6.3	In-situ Monitoring	229
6.3.1	In-situ Monitoring as Part of Automation	230

6.3.2	In-situ Monitoring with PC-Coupling and -Software for Data Acquisition and Evaluation	231
6.4	Bus-Supported Energy Management of a Network of Renewable Energy Plants	231
	References	239
7	Automation Devices and Their Connection to the Building	
	Automation	241
	Elmar Bollin and Martin Becker	
7.1	Introduction to Automation Technology	242
7.2	Compact Automation Devices	247
7.2.1	Simple Compact Solar Controller	247
7.2.2	Versatile Compact Solar Controller	248
7.2.3	Programmable Solar Universal Controller	249
7.2.4	Heat Pump Compact Controller	250
7.3	Integration of Monitoring and Control into a Higher-Level Building Automation System and into the Building Management System	254
7.3.1	Integration of Renewable Energy Systems into the Building Automation System	255
7.3.1.1	Application Example: Automation of an Energy System Network in Technikum G at Biberach University of Applied Sciences Germany	255
7.3.1.2	Application Example: Multi-Vendor Building Automation System Based on LabVIEW	259
	References	263
