Contents

<i>List of figures</i>	xiii
<i>Foreword</i>	xvii
<i>Preface</i>	xix
<i>Author background</i>	xxi
1 Why – introduction	1
1.1 <i>Sustainability and construction</i> 1	
Sustainable development and the precautionary principle	1
UN sustainability goals and the construction sector	4
1.2 <i>The climate factors</i> 9	
The Hothouse Earth	9
Carbon Law	12
Energy sector	15
Buildings	18
Industry sector	20
1.3 <i>Population growth and construction demand</i> 21	
The demand for new buildings	24
1.4 <i>The construction process and sustainability</i> 25	
Sustainability in construction	27
1.5 <i>Zero carbon and regenerative building</i> 29	
Net zero	30
Regenerative development	33
Regenerative sustainability	34
Regenerative community development	35
Regenerative buildings	36
1.6 <i>The big challenge of existing buildings</i> 37	
Actions critical to achieving a sustainable building stock	38
Building renovation passport	39
Minimum energy performance standards	41
Roadmap to a decarbonised building stock	43
<i>Case 1: Lessons learned from a regenerative renovation, Spain</i>	44

2 The end? – circularity and deconstruction	49
2.1 <i>Circular economy</i>	49
2.2 <i>Circular economy in the built environment</i>	52
Regenerate	54
Share	54
Optimise	55
Loop	56
Virtualise	56
Exchange	57
The seven layers	57
2.3 <i>Recourse use and material characteristics</i>	59
The transition to circularity	60
Policymakers	60
Investors	61
The client	61
Circular building design	61
Materials passports	64
Tools of material selection	66
2.4 <i>Reduce – reuse – restore – regenerate</i>	67
<i>Case 2: Reusable timber structures</i>	69
2.5 <i>Regenerative approach to circular economy in the built environment</i>	70
3 Who – the client and the stakeholders	73
3.1 <i>The client</i>	73
The client and sustainability	74
The client and the regenerative process	74
Aspects of a regenerative approach	75
The core team	76
3.2 <i>Management systems</i>	76
Environmental management systems	78
ISO14001: terms, definitions, and the process	80
Ethical considerations	82
3.3 <i>The stakeholders</i>	83
Engagement with stakeholders	84
Key actions of stakeholders	86
Capacity building, a knowledge transfer	87
Finance	88
4 Where – the location	90
4.1 <i>The location</i>	90
Environmental aspects	90
Economic aspects	92
Social and cultural aspects	93

4.2	<i>Urban ecosystem services</i>	94	
	Urban provisioning ecosystem services	95	
	Urban regulating ecosystem services	95	
	Urban cultural ecosystem services	97	
	Urban habitat ecosystem services	98	
	Urban ecosystem disservices	98	
4.3	<i>Ecosystem services analysis process</i>	99	
5	When – the project organisation		101
5.1	<i>Project management</i>	101	
	The project	101	
	The project manager	102	
	The project organisation	105	
5.2	<i>Project toolkit or knowledge areas</i>	107	
	The classic project tools	107	
	BIM in construction projects	110	
	Sustainability and regenerative aspects	112	
6	How – the project performance		114
6.1	<i>The design process – key factors</i>	114	
	A roadmap for key actions in the design of new buildings	114	
	Benefits of designing buildings from a sustainability point of view	115	
	Nature-based design solutions	116	
	Bioclimatic approach	117	
	Biophilic approach	118	
	Biomimicry approach	120	
	Nature-based solutions and ecosystem services	123	
	Timeline for new buildings with zero carbon emissions and sustainability	127	
	Key factors of the building envelope	129	
	Key factors of HVAC and appliances	130	
	External	130	
	Cool buildings	131	
	Key factors of healthy homes in the built environment	133	
	Regenerative design approach	135	
	Three design strategies	137	
	Twelve design principles	140	
6.2	<i>The construction process</i>	142	
	Procurement	142	
	Sustainable procurement ISO 20400	142	
	Construction contracts	143	
	Tendering process	146	
	Construction	146	
	Contractor organisation	146	
	Site planning and construction performance	147	

Supply-chain management	147
Material selection	148
Subcontractors	148
Handover and commissioning	149
Regenerative aspects of the construction phase	150
Procurement and contracting	150
Construction phase	151
Handover and commissioning	152
6.3 <i>Operation and maintenance process</i>	153
Key actions of the operation and maintenance of a building	153
Soft landings and post-occupancy evaluation	156
Post-Occupancy Evaluation	158
Green leasing	159
Sustainable facility management and green maintainability	160
Green maintainability	161
Regenerative aspects of operation and maintenance	161
7 Verify – assessment, rating, and certification	166
7.1 <i>Reducing carbon emissions</i>	166
Carbon emissions in construction	166
A standard procedure of estimating embodied carbon emission	170
<i>Case 3: How to reduce embodied carbon in practice – an example from Sweden</i>	171
The content of the climate declaration	172
Limit values	173
Unsubmitted climate declaration	173
7.2 <i>General assessment methods</i>	173
7.3 <i>Selection of environmentally labelled construction materials and products</i>	175
7.4 <i>Building rating and certification schemes</i>	176
More of the most common certification schemes	183
<i>Case 4: Two examples of locally adapted schemes</i>	185
Critical path tools	187
7.5 <i>Sustainability and regenerative certifications</i>	189
Regenerative options	190
The LBC scheme and regenerative principles	191
Level of regenerative indicators	196
8 Further on – construction for a regenerative future	200
8.1 <i>The basics: regenerative development</i>	200
Regenerative sustainability	201
Regenerative community	202
Regenerative buildings	203

8.2 *The client and the regenerative process* 204
 The core team 205
 The project organisation 206

8.3 *Regenerative design* 206
 The three design strategies 208
 The 12 design principles 210
 Regeneration and circular economy 212

8.4 *Regenerative construction* 213
 Procurement and contracting 213
 Construction phase 214
 Handover and commissioning 215

8.5 *Regenerative operation and maintenance* 216

8.6 *Regenerative rating and certification* 217
 Regenerative options 218
 The LBC and the 12 principles 219
 Regenerative indicators 222

8.7 *End remarks* 223
 Climate change impacts caused by the construction sector 224
 A condensed roadmap for a regenerative construction project 225
 Further on to a construction process for a generative future 226
