∞ Printed on acid-free text paper, manufactured in accordance with
ANSI/NISO Z39.48-1992 (Permanence of Paper).

CONTENTS

<i>Preface</i>	vii
<i>Acknowledgements</i>	ix
<i>Notation</i>	xi
<i>The European Community (map)</i>	xii
1 Introduction	1
1.1 The European Community	1
1.2 Technical harmonization and standards	1
1.3 Structural Eurocodes	2
1.4 Eurocode 2	3
1.5 Layout of EC2	3
1.6 Fundamental requirements	4
1.7 Limit states	4
1.8 Actions	4
1.9 Characteristic values of actions	5
1.10 Partial safety factors for ultimate limit state	6
1.11 Serviceability limit states	6
1.12 Material properties	7
1.13 Summary	9
References	9
2 Design for durability	11
2.1 Introduction	11
2.2 Environmental conditions	11
2.3 Environmental factors	13
2.4 The C_3S/C_2S ratio	13
2.5 Carbonation	15
2.6 Cover to reinforcement	15
2.7 Chlorides	18
2.8 Curing	18
2.9 Cement content	19
2.10 Summary	20
References	20
3 Load arrangements and analysis	21
3.1 Introduction	21
3.2 Load cases and combinations	21
3.3 Structural models for overall analysis	22
3.4 Calculation methods	22
3.5 Summary	31
References	31

4	Section analysis (1): slabs and beams	33
4.1	Introduction	33
4.2	Ultimate limit state – flexure	33
4.3	Ultimate limit state – shear	36
	<i>Example 4.1: flexure and shear capacity</i>	38
4.4	Punching shear	40
	<i>Example 4.2: punching shear, flat slab</i>	41
4.5	Torsion	43
	<i>Example 4.3: flexure, shear and torsion</i>	45
4.6	Summary of EC2 detailing provisions	47
4.7	Beams – design for seismic actions	50
	<i>Example 4.4: beam design, ductility levels</i>	50
4.8	Serviceability limit states	58
	<i>Example 4.5: steel and concrete stresses</i>	59
	<i>Example 4.6: deflection check using table 4.14 of EC2</i>	67
	<i>Example 4.7: cracking check using tables 4.11 and 4.12 of EC2</i>	69
	<i>Example 4.8: deflection check by calculation</i>	70
	<i>Example 4.9: crack width by calculation</i>	73
4.9	Summary	74
	References	75
5	Section analysis (2): beam–column joints	77
5.1	Introduction	77
5.2	Joint behaviour	77
5.3	EC8 beam–column joints, ductility class ‘L’	82
5.4	EC8 beam–column joints, ductility class ‘M’	82
5.5	EC8 beam–column joints, ductility class ‘H’	83
	<i>Example 5.1: beam–column joint, DC ‘H’</i>	83
5.6	Summary	85
	References	86
6	Section analysis (3): columns and walls	87
6.1	Reinforced concrete column design	87
6.2	Column design approach	87
6.3	Column slenderness ratio	89
6.4	Column design actions	91
6.5	Design steps	92
	<i>Example 6.1: design example</i>	95
6.6	Column design section	96
	<i>Example 6.2: rectangular column section, with no sway</i>	102
	<i>Example 6.3: rectangular column section, with no sway, longer column</i>	102
	<i>Example 6.4: rectangular column section, with sway in one direction</i>	104
6.7	Walls and plates loaded in their own plane	106
6.8	Reinforcement and dimensional limits	108
6.9	EC8 (Draft) additional column design requirements	109
6.10	EC8 (Draft) additional wall design requirements	113
	<i>Example 6.5: wall section design example</i>	118
	References and Bibliography	122
7	Earthquake engineering	123
7.1	Introduction	123
7.2	Earthquakes	123
7.3	Earthquake dynamic analysis	127
7.4	Earthquake random ground motion	131
7.5	Modal analysis	133

CONTENTS

v

7.6	Total inertial response forces on a frame	138
	References and Bibliography	140
8	Design example	147
8.1	Introduction	147
8.2	Preliminary design: case (i) EC2/NAD	147
8.3	Preliminary design: case (ii) EC8/EC2	155
8.4	Preliminary design – summary	159
8.5	Detailed design	159
	References	159
Appendices		161
A	Reinforcement areas	161
B	Guidelines for preliminary design	163
C	Ratios of design bending moments (EC2/BS 8110)	171
D	Yield-line analysis – design formulae	175
E	The strip method with numerical application	179
F	Column design charts	183
G	Beam design charts	187
H	Typical details for a frame designed for seismic actions	189
