Preface vii

CHAPTER 1. VECTOR ANALYSIS 1

1.1 Introduction 1
1.2 Fields: Vector and Scalar 1
1.3 Vectors as Directed Line Segments 2
1.4 Vector Addition 3
1.5 The Dot, or Scalar, Product 6
1.6 The Cross, or Vector, Product 6
1.7 Vector Coordinate Transformations 7
1.8 Line Integrals 10
1.9 Surface Integrals 15
1.10 Differential Vector Operations 18
1.11 Integral Vector Theorems 21
1.12 Useful Formulas 23
1.13 Summary 25
Problems 25

CHAPTER 2. GENERAL PRINCIPLES 33

2.1 Introduction 33
2.2 The Field Concept 33
2.3 Charge: The Source of Electromagnetic Fields 34
2.4 The Electromagnetic Field Vectors and the Field Equations 36
2.5 A Brief History of Electromagnetics 45
2.6 A Physical Interpretation and Units of the Field Vectors 55
2.7 Macroscopic Properties of Matter 59
2.8 Types of Currents 67

2.9 Derivation of the Boundary Conditions 71
2.10 A Formal Statement of the Principle of the Conservation of Charge 76
2.11 Power and Energy 80
2.12 Properties and Types of Fields 83
2.13 Electromagnetic Potentials 89
2.14 The Development of the Present System of Electromagnetic Units 94
2.15 Electromagnetic Characterization of a Medium 97
2.16 Summary 103
Problems 107

CHAPTER 3. THE ELECTROSTATIC FIELD 114

3.1 Introduction 114
3.2 Electrostatic Field Equations 115
3.3 Electrostatic Potential 116
3.4 The Concept of a Point Charge and Coulomb's Law 122
3.5 Field of Fixed Point-charge Configurations and the Electric Dipole 123
3.6 Integration of Poisson's Equation 128
3.7 Field of Continuous Charge Distributions 131
3.8 The Capacitance Concept 138
3.9 Formulation of the Boundary-value Problem in Electrostatics 140
3.10 Formal Solutions of Laplace's Equation in Rectangular Coordinates 142
3.11 Uniqueness 148
3.12 Formal Solutions of Laplace's Equation in Cylindrical Coordinates 150
3.13 Formal Solutions of Laplace's Equation in Spherical Coordinates 155
3.14 Properties of Laplace's Equation 159
3.15 The Numerical Method 166
3.16 Adapting a Known Solution to a New Problem 169
3.17 The Method of Images 172
3.18 The Method of Conformal Transformations 177
3.19 The Graphical Method 181
3.20 The Natural Distribution of Charge 181
3.21 Solution of Poisson's Equation 184
3.22 Synthesis of Electrostatic Fields 186
3.23 Summary 188
Problems 189

CHAPTER 4. THE MAGNETOSTATIC FIELD 198

4.1 Introduction 198
4.2 Magnetostatic Field Equations 198
4.3 Magnetic Field of a Stationary Current Distribution 201
4.4 The Biot-Savart Law 208
4.5 Magnetostatic Force 212
4.6 Flux Linkages 215
4.7 The Inductance Concept 216
4.8 The Scalar Magnetic Potential 228
4.9 Ferromagnetic Circuits 230
4.10 The Boundary-value Problem in Magnetostatics 244
4.11 Synthesis of Magnetostatic Fields 249
4.12 Summary 249
Problems 250

CHAPTER 5. THE ELECTROMAGNETOSTATIC FIELD 258

5.1 Introduction 258
5.2 Electromagnetostatic Field Equations 258
5.3 The Resistance Concept 261
5.4 Duality 264
5.5 The Boundary-value Problem in Electromagnetostatics 267
5.6 Summary 268
Problems 269

CHAPTER 6. ELECTROMAGNETIC ENERGY, POWER, STRESS, AND MOMENTUM 273

6.1 Introduction 273
6.2 General Energy Relations 273
6.3 Energy Relations in the Electrostatic Field 276
6.4 Thomson's Theorem 279
6.5 Energy Relations in the Magnetostatic Field 281
6.6 Energy Considerations in Physical Media 284
6.7 Circuit Concept of Power 287
6.8 Electromagnetic Stress and Momentum 289
6.9 The Principle of Virtual Work 292
6.10 Summary 294
Problems 295

CHAPTER 7. TRANSVERSE ELECTROMAGNETIC (TEM) WAVES 299

7.1 Introduction 299
7.2 The Wave Equation 299

7.3 Solution of the Simplified Wave Equation 302
7.4 Interpretation of the Solutions 302
7.5 The Sinusoidal Steady State 304
7.6 Uniform Plane Waves in Unbounded, Lossless, and Source-free Media 307
7.7 The Complex Poynting's Theorem 312
7.8 Polarization 315
7.9 Uniform Plane Waves in Conducting Media 321
7.10 Propagation of Uniform Plane Waves in Arbitrary Space Directions 325
7.11 Group Velocity 329
7.12 Wave Propagation in Linear Anisotropic Media 333
7.13 Cylindrical and Spherical Waves 339
7.14 Nonuniform Waves 340
7.15 Summary 341
Problems 343

CHAPTER 8. REFLECTION AND REFRACTION OF PLANE WAVES 346

8.1 Introduction 346
8.2 General Direction of Propagation 346
8.3 Snell's Laws 349
8.4 Reflection and Refraction at Plane Dielectric Boundaries 352
8.5 Brewster Angle (Polarizing Angle) 359
8.6 Total Internal Reflection (the Critical Angle) 362
8.7 Conducting Media; Reflection and Refraction 367
8.8 Multiple Interfaces 372
8.9 Scattering 377
8.10 Inhomogeneous Media and Geometrical Optics 382
8.11 Reflection and Refraction of Waves by an Ionized Gas 387
8.12 Summary 390
Problems 391

CHAPTER 9. TRANSMISSION LINES AND WAVEGUIDES 398

9.1 Introduction 398
9.2 Existence and Definition of the Transmission Line Mode 398
9.3 Characteristics of the Transmission Line Mode 399
9.4 The Coaxial Transmission Line 404
9.5 Transmission Line Analysis 407

9.6 Voltage Standing Wave Ratio (VSWR), Reflection Coefficient, and Matched Lines 414
9.7 Transmission Line Matching 418
9.8 Lossy Transmission Lines 425
9.9 Transients on Lossless Transmission Lines 431
9.10 Waveguides 435
9.11 TM Modes in Rectangular Waveguides 438
9.12 TE Modes in Rectangular Waveguides 440
9.13 Power Calculations in Waveguides 444
9.14 Cylindrical Waveguides 447
9.15 Summary 451
Problems 451

CHAPTER 10. RADIATION AND ANTENNAS 458

10.1 Introduction 458
10.2 The Radiation Problem 458
10.3 The Field of a Current Element (Hertzian Dipole) 460
10.4 Power Radiated by a Current Element 463
10.5 The General Nature of the Far Field of an Antenna 465
10.6 Antenna Patterns 467
10.7 Directivity and Gain 469
10.8 Linear Dipole Antennas 471
10.9 Current Distribution on a Linear Antenna 473
10.10 The Longer Linear Dipole and Monopole 474
10.11 Antenna Arrays 478
10.12 Uniform Linear Arrays 483
10.13 Huygens' Principle and Aperture Antennas 485
10.14 Aperture Synthesis 497
10.15 Reciprocity 502
10.16 Summary 505
Problems 506

CHAPTER 11. THE QUASISTATIC FIELD 512

11.1 Introduction 512
11.2 Fields in Lumped Circuit Elements 513
11.3 An Iterative Solution for Time-varying Fields 516
11.4 Variations of a Capacitor with Frequency 522
11.5 Immittance from Power Considerations 527
11.6 Basic Concepts of the Calculus of Variations 529
11.7 A Variational Principle for Electromagnetic Fields 534
11.8 Field Theory and the Circuit Concept 537

11.9 Time Rate of Change of the Flux Linked by a Moving Contour 542
11.10 The *emf* and *Blv* Concepts 544
11.11 Summary 548
Problems 549

Appendix 555
Answers to Problems 561
Index 579
