QUEUEING SYSTEMS

VOLUME 18 (1994) Nos. 1,2

Published October 1994

Contents

Editorial introduction <i>M. Miyazawa and H. Takagi</i>	†
First-passage-time and busy-period distributions of discrete-time Markovian queues: $Geom(n)/Geom(n)/1/N$ <i>M. L. Chaudhry and Y. Q. Zhao</i>	5
Transient analysis of queues with heterogeneous arrivals <i>W. Böhm and S. G. Mohanty</i>	27
Analyzing the discrete-time $G^{(G)}/Geo/1$ queue using complex contour integration <i>B. Vinck and H. Bruneel</i>	47
An analytical solution for the discrete time single server system with semi-Markovian arrivals <i>E. S. Rieger and G. Haßlinger</i>	69
Analysis of discrete time queues via the reversed process <i>R. D. Yates</i>	107
Features of some discrete-time cyclic queueing networks <i>V. Pestien and S. Ramakrishnan</i>	117
Quasi-reversibility of a discrete-time queue and related models <i>H. Ōsawa</i>	133
On the characterization of departure rules for discrete-time queueing networks with batch movements and its applications <i>M. Miyazawa</i>	149
Discrete-time analysis of a classified multi-server queue with burst arrivals and a shared buffer <i>H. Yamashita</i>	167
Analysis of a discrete-time queueing system with time-limited service <i>H. Takagi and K. K. Leung</i>	183
