# ENVIRONMENTAL POLLUTION

## CONTENTS—Continued from outside back cover

- 293 **The Solling roof revisited – slow recovery from acidification observed and modeled despite a decade of “clean-rain” treatment**  
L. Martinson, N. Lamersdorf, P. Warfvinge  
*Model predictions show slow recovery by 2050.*
- 303 **The effect of hydrological regime on the metal bioavailability for the wetland plant species *Salix cinerea***  
B. Vandecasteele, P. Quataert, F.M.G. Tack  
*A hydrological regime aiming at wetland creation is a potential management option that favors reducing Cd plant availability in polluted freshwater wetlands.*
- 313 **Manganese toxicity thresholds for restoration grass species**  
M.W. Paschke, A. Valdecantos, E.F. Redente  
*Mn phytotoxicity thresholds for restoration grasses should be useful for risk assessments of metal-contaminated lands.*
- 323 **Decomposition of leaves of the metallophyte *Arabidopsis halleri* in soil microcosms: fate of Zn and Cd from plant residues**  
U. Boucher, I. Lamy, P. Cambier, M. Balabane  
*Changes in metallic speciation occurred in two stages.*
- 333 **Effects of arsenic on concentration and distribution of nutrients in the fronds of the arsenic hyperaccumulator *Pteris vittata* L.**  
C. Tu, L.Q. Ma  
*Arsenic hyperaccumulator *P. vittata* maintained adequate levels of essential nutrients in the fronds under arsenic stress.*
- Letter to the editor
- 341 **Comment on “Characterization of a reference site for quantifying uncertainties related to soil sampling” by S. Barbizzi et al. (2004)**  
P. Baveye

**CONTENTS**

**Volume 135 Number 2 2005**

- 187 Decomposition in soil microcosms of leaves of the metallophyte *Arabidopsis halleri*: effect of leaf-associated heavy metals on biodegradation**  
U. Boucher, M. Balabane, I. Lamy, P. Cambier  
*Decomposition of slowly decomposable fractions of metal-rich plant residues is slowed by the metals.*
- 195 Sub-cellular partitioning of Cd, Cu and Zn in tissues of indigenous unionid bivalves living along a metal exposure gradient and links to metal-induced effects**  
E. Bonneris, O. Perceval, S. Masson, L. Hare, P.G.C. Campbell  
*In natural populations of bivalves, metals were differentially bound in the gills and digestive gland.*
- 209 Metal stress consequences on frost hardiness of plants at northern high latitudes: a review and hypothesis**  
K. Taulavuori, M.N.V. Prasad, E. Taulavuori, K. Laine  
*Metal stress may reduce plant frost hardiness.*
- 221 Dynamical coupling of PBPK/PD and AUC-based toxicity models for arsenic in tilapia *Oreochromis mossambicus* from blackfoot disease area in Taiwan**  
C.-M. Liao, H.-M. Liang, B.-C. Chen, S. Singh, J.-W. Tsai, Y.-H. Chou, W.-T. Lin  
*Integrated toxicity models can identify dynamic responses of fish to arsenic.*
- 235 Octanol-solubility of dissolved and particulate trace metals in contaminated rivers: implications for metal reactivity and availability**  
A. Turner, E. Mawji  
*New approaches are presented for fractionating trace metals in natural waters.*
- 245 Dietary mercury exposure and bioaccumulation in amphibian larvae inhabiting Carolina bay wetlands**  
J.M. Unrine, C.H. Jagoe, A.C. Brinton, H.A. Brant, N.T. Garvin  
*Tadpoles accumulate significant concentrations of mercury in isolated wetlands.*
- 255 Diversity of arbuscular mycorrhizal fungi in grassland spontaneously developed on area polluted by a fertilizer plant**  
C. Renker, V. Blanke, F. Buscot  
*Almost all plants species were mycorrhizal.*
- 267 In vitro toxicity of selected pesticides on RTG-2 and RTL-W1 fish cell lines**  
M.M. Babín, J.V. Tarazona  
*In vitro cell cultures can provide sensitive indicators for pesticide effects on biota.*
- 275 Early-phase immunodetection of metallothionein and heat shock proteins in extruded earthworm coelomocytes after dermal exposure to metal ions**  
J. Homa, E. Olchawa, S.R. Stürzenbaum, A. John Morgan, B. Plytycz  
*Metals upregulate stress response proteins in earthworm coelomocytes.*
- 281 Oxygen levels versus chemical pollutants: do they have similar influence on macrofaunal assemblages? A case study in a harbour with two opposing entrances**  
J.M. Guerra-García, J.C. García-Gómez  
*A high biomass of benthic animals was found in a metal-polluted estuary where high oxygen levels occurred.*
