# Fuels and Engines

TECHNOLOGY ■ ENERGY ■ ENVIRONMENT

2

Editions TECHNIP

# Volume 2

(p. I to XLII and 387 to 773)

<i>Foreword</i> .....	V
<i>Preface</i> .....	IX
<b>Abbreviations and acronyms (Vol. 1 and 2)</b> .....	XXXVII
<b>Chapter 5</b>	
<b>FUELS, FUEL CONSUMPTION AND ENVIRONMENTAL PROTECTION</b> .....	387
<i>FROM 1970 TO 2000 ACHIEVEMENTS AND NEW CHALLENGES</i> .....	388
<i>FUELS AND ENERGY CONSUMPTION</i> .....	392
<b>5.1 The fuel consumption of light vehicles</b> .....	392
<b>5.1.1 Legislation and projects</b> .....	392
5.1.1.1 The CAFE regulations in the United States .....	392
5.1.1.2 The European approach .....	394
<b>5.1.2 Parameters affecting fuel consumption</b> .....	394
5.1.2.1 Preliminary analysis .....	394
5.1.2.2 Various types of motion resistance .....	395
5.1.2.3 The effect of speed .....	397
5.1.2.4 Urban traffic .....	397
5.1.2.5 The effect of cold temperatures .....	398
<b>5.1.3 Major avenues to reducing fuel consumption</b> .....	400
5.1.3.1 Improving engine efficiency .....	400
5.1.3.2 Reducing mechanical losses .....	400
5.1.3.3 Engine-vehicle matching .....	402
5.1.3.4 Types of use .....	404
<b>5.1.4 Comparison of diesel and gasoline variants</b> .....	406
5.1.4.1 Potential advantages of diesel engines .....	406
5.1.4.2 Actual behavior in service .....	406
<b>5.2 Fuel consumption of commercial vehicles</b> .....	408
<b>5.2.1 The various types of vehicles</b> .....	408

<b>5.2.2</b>	<b>Factors affecting fuel consumption</b> .....	409
5.2.2.1	Load and type of use .....	409
5.2.2.2	Grades .....	410
5.2.2.3	Changes in engine technology .....	410
5.2.2.4	External conditions .....	411
5.2.2.5	Endurance and longevity .....	411
<i>INVENTORY OF POLLUTANTS. EMISSION LEVELS. LEGISLATION. . .</i>		412
<b>5.3</b>	<b>Evaporative emissions of hydrocarbons</b> .....	412
<b>5.3.1</b>	<b>Evaporative losses before refueling</b> .....	412
<b>5.3.2</b>	<b>Evaporative losses during refueling</b> .....	412
<b>5.3.3</b>	<b>Evaporative losses from vehicles</b> .....	413
5.3.3.1	Definitions and classifications .....	414
5.3.3.2	Legislation and test methods .....	414
5.3.3.3	Control devices .....	416
5.3.3.4	The effect of the fuel .....	417
<b>5.3.4</b>	<b>The relative importance of evaporative losses</b> .....	418
<b>5.4</b>	<b>Tailpipe emissions</b> .....	420
<b>5.4.1</b>	<b>Conventional emissions</b> .....	420
5.4.1.1	Mechanics of formation .....	420
5.4.1.2	The effect of operating conditions on conventional emissions .....	426
<b>5.4.2</b>	<b>Specific pollutants</b> .....	426
5.4.2.1	Separation of the various hydrocarbon tailpipe emissions .....	428
5.4.2.2	Aldehydes .....	428
5.4.2.3	Polynuclear aromatic hydrocarbons (PAH) ...	430
5.4.2.4	Grouping toxic emissions .....	432
<b>5.4.3</b>	<b>Emissions deriving from fuel impurities or additives</b>	433
5.4.3.1	Lead compounds .....	433
5.4.3.2	Sulfurous and sulfuric anhydride .....	433
<b>5.5</b>	<b>Pollutants that form in the atmosphere:</b>	
	<b>tropospheric ozone</b> .....	434
<b>5.5.1</b>	<b>Ozone—a naturally-occurring atmospheric constituent</b> .....	434
<b>5.5.2</b>	<b>Tropospheric ozone growth mechanism</b> .....	435

5.5.3	<b>Legislation and monitoring of ozone pollution</b> . . . . .	436
5.5.4	<b>Modeling approaches of photochemical pollution</b> . . . . .	437
5.5.5	<b>Strategies to reduce ozone production</b> . . . . .	438
5.6	<b>Legislation applying to vehicle tailpipe emissions</b> . . . . .	439
5.6.1	<b>Overview</b> . . . . .	440
5.6.2	<b>European legislation</b> . . . . .	440
5.6.2.1	Passenger cars . . . . .	440
5.6.2.2	Commercial vehicles less than 3.5 tonnes . . . . .	446
5.6.2.3	Commercial vehicles greater than 3.5 tonnes . . . . .	446
5.6.2.4	Two- and three-wheeled vehicles . . . . .	448
5.6.3	<b>United States legislation</b> . . . . .	449
5.6.3.1	Light-duty vehicles and equivalents . . . . .	449
5.6.3.2	Medium-duty vehicles . . . . .	453
5.6.3.3	Heavy-duty vehicles . . . . .	453
5.6.4	<b>Japanese legislation</b> . . . . .	455
5.6.4.1	Light-duty vehicles . . . . .	455
5.6.4.2	Heavy-duty vehicles . . . . .	457
5.6.5	<b>Environmental legislation in other countries</b> . . . . .	457
	 <i>TECHNOLOGIES FOR REDUCING TAILPIPE EMISSIONS</i> . . . . .	460
5.7	<b>Reducing emission at the source</b> . . . . .	460
5.7.1	<b>Spark-ignition engines</b> . . . . .	460
5.7.2	<b>Diesel engines</b> . . . . .	462
5.8	<b>Exhaust gas treatment with catalytic converters</b> . . . . .	463
5.8.1	<b>Three-way catalysts</b> . . . . .	465
5.8.1.1	General principles and the composition of the catalysts . . . . .	465
5.8.1.2	Catalyst light-off . . . . .	467
5.8.1.3	Endurance-problems with aging and poisoning . . . . .	469
5.8.1.4	Improvements in 3-way catalysts . . . . .	472
5.8.1.5	On-board diagnostics (OBD) . . . . .	472
5.8.2	<b>Diesel oxidation catalysts</b> . . . . .	474
5.8.2.1	Catalyst characteristics and conditions of use . . . . .	474
5.8.2.2	Efficiency of diesel oxidation catalysts . . . . .	476

5.8.3	<b>The catalytic reduction of oxides of nitrogen in the presence of oxygen</b> .....	476
<b>5.9</b>	<b>Particulate filters</b> .....	480
5.9.1	<b>Various filtering technologies</b> .....	480
5.9.1.1	Monolithic ceramic filters .....	480
5.9.1.2	Ceramic fiber filters .....	482
5.9.1.3	Metallic filters .....	482
5.9.1.4	Knitted ceramic filters .....	482
5.9.2	<b>The regeneration of particulate filters</b> .....	483
5.9.2.1	Assisted thermal regeneration .....	483
5.9.2.2	Catalytic regeneration .....	483
5.9.3	<b>Futures prospects</b> .....	485
	<i>REDUCING EMISSIONS BY USING FUEL AS AN INTERMEDIARY</i> .....	487
<b>5.10</b>	<b>Means and methods of investigation</b> .....	487
5.10.1	<b>The American Auto/Oil program</b> .....	488
5.10.2	<b>The European strategy: the tripartite initiative and the EPEFE program</b> .....	490
<b>5.11</b>	<b>Characteristics of fuels and emissions</b> .....	492
5.11.1	<b>Conventional emissions</b> .....	492
5.11.1.1	American Auto/Oil program .....	493
5.11.1.2	EPEFE program .....	494
5.11.2	<b>Evaporative losses</b> .....	495
5.11.3	<b>Toxic Air Pollutants (TAP)</b> .....	495
5.11.4	<b>Gasoline and ozone formation</b> .....	497
<b>5.12</b>	<b>Reformulated gasolines</b> .....	499
5.12.1	<b>Federal legislation</b> .....	500
5.12.1.1	General framework .....	500
5.12.1.2	Typical product characteristics .....	500
5.12.1.3	Simple and complex empirical models .....	501
5.12.1.4	Complementary arrangements .....	506
5.12.2	<b>California regulations</b> .....	507
5.12.3	<b>Regulations in other countries</b> .....	508

<b>5.13</b>	<b>Future specifications for European gasolines</b> .....	508
<b>5.14</b>	<b>Diesel fuel characteristics and emissions</b> .....	509
<b>5.14.1</b>	<b>The various approaches</b> .....	509
<b>5.14.2</b>	<b>Implications for refinery operations</b> .....	510
5.14.2.1	Hydrodesulfurization .....	512
5.14.2.2	Hydrotreatment .....	512
5.14.2.3	An extreme case: Fischer-Tropsch diesel fuel .	513
<b>5.14.3</b>	<b>Matrix Study</b> .....	515
5.14.3.1	Conventional pollutants .....	515
5.14.3.2	PAH emissions .....	519
<b>5.14.4</b>	<b>Reformulated diesel fuels</b> .....	519
<b>5.15</b>	<b>Future characteristics of European diesel fuels</b> .....	522
<b>5.16</b>	<b>Comparing the emissions of gasoline- and diesel-powered vehicles</b> .....	522
<b>5.16.1</b>	<b>Direct emissions</b> .....	522
<b>5.16.2</b>	<b>Secondary emissions—health implications.</b> .....	523
	<i>FUELS AND THE GREENHOUSE EFFECT</i> .....	526
<b>5.17</b>	<b>The greenhouse effect and human activities</b> .....	526
<b>5.17.1</b>	<b>Nature of the phenomenon</b> .....	526
<b>5.17.2</b>	<b>Relative contribution from various activities</b> .....	528
<b>5.17.3</b>	<b>Transportation's role</b> .....	528
<b>5.18</b>	<b>Comparison of gasoline and diesel contributions</b> .....	529
<b>5.19</b>	<b>Projects to regulate CO<sub>2</sub> emissions.</b> .....	531
 <b>Chapter 6</b>		
	<b>ALTERNATIVE FUELS</b> .....	533
	<i>LPG FUEL</i> .....	533
<b>6.1</b>	<b>Availability and markets</b> .....	533

<b>6.2</b>	<b>Characteristics and specifications</b> .....	536
6.2.1	Chemical composition .....	537
6.2.2	Physical characteristics .....	537
6.2.3	Octane rating .....	539
<b>6.3</b>	<b>Vehicle adaptation</b> .....	539
6.3.1	Fuel systems .....	540
6.3.1.1	Venturi-effect systems .....	540
6.3.1.2	Injection .....	541
6.3.2	Installation of fuel systems .....	542
6.3.3	Storage tanks .....	542
<b>6.4</b>	<b>LPG's energy and environmental balance</b> .....	543
6.4.1	Vehicle performance .....	543
6.4.1.1	Torque and power .....	543
6.4.1.2	Fuel consumption .....	543
6.4.2	Emissions .....	544
6.4.2.1	Conventional emissions .....	544
6.4.2.2	Specific pollutants .....	547
6.4.3	A promising outlook ... for a limited market .....	547
	<i>NATURAL GAS MOTOR FUEL</i> .....	548
<b>6.5</b>	<b>Current experience and achievements</b> .....	548
6.5.1	Possible methods of storage and distribution .....	548
6.5.2	The global NGV vehicle fleet .....	549
<b>6.6</b>	<b>Characteristics of NGV</b> .....	551
6.6.1	Chemical composition .....	551
6.6.2	Heat content .....	551
6.6.3	Wobbe index .....	553
6.6.4	NGV combustion in engines .....	554
6.6.4.1	Octane rating .....	554
6.6.4.2	Ignition and flame propagation .....	555
6.6.4.3	Temperature and composition of the combustion products .....	556

<b>6.7</b>	<b>The technologies associated with NGV</b> .....	556
<b>6.7.1</b>	<b>Storage and distribution of NGV</b> .....	556
6.7.1.1	Vehicle fuel tanks .....	557
6.7.1.2	Distribution systems .....	557
<b>6.7.2</b>	<b>Combustion strategies</b> .....	56
6.7.2.1	Passenger cars .....	56
6.7.2.2	Buses .....	56
<b>6.7.3</b>	<b>Fuel delivery systems</b> .....	56
6.7.3.1	Carburetors .....	56
6.7.3.2	Indirect injection .....	56
6.7.3.3	Direct injection .....	56
6.7.3.4	Comparison of various systems .....	56
<b>6.8</b>	<b>Energy and environmental balance for NGV systems</b> .....	56
<b>6.8.1</b>	<b>Energy costs associated with NGV implementation</b> .....	56
<b>6.8.2</b>	<b>Vehicle behavior</b> .....	56
6.8.2.1	Passenger cars .....	56
6.8.2.2	Buses and other heavy-duty vehicles .....	56
<b>6.8.3</b>	<b>The greenhouse effect</b> .....	56
<b>6.9</b>	<b>The outlook for CNG</b> .....	56
	<b>METHANOL AND MTBE</b> .....	56
<b>6.10</b>	<b>Specific characteristics of methanol and methyl ethers</b> .....	56
<b>6.11</b>	<b>The addition of small quantities of methanol to gasoline</b> .....	56
6.11.1	Stability in the presence of trace amounts of water .....	56
6.11.2	Increase in volatility .....	56
6.11.3	Materials behavior .....	56
6.11.4	Current state of methanol use .....	56
<b>6.12</b>	<b>The addition of MTBE</b> .....	56
6.12.1	Technical characteristics .....	56
6.12.2	Current and predicted use of MTBE .....	56

<b>6.13 Fuels with high methanol content</b> .....	582
<b>6.13.1 Technological feasibility</b> .....	582
6.13.1.1 Gasoline-type combustion .....	582
6.13.1.2 Diesel-type combustion .....	583
<b>6.13.2 Emissions</b> .....	584
6.13.2.1 Light-duty vehicles .....	584
6.13.2.2 Trucks and buses .....	586
<b>6.13.3 Possible developments in the use of M85</b> .....	586
<b>6.14 An extreme case: the use of pure MTBE</b> .....	587
 <i>BIOFUELS</i> .....	 588
<b>6.15 Brief history of biofuels</b> .....	588
<b>6.15.1 Ethanol</b> .....	588
<b>6.15.2 Vegetable oils</b> .....	589
<b>6.15.3 Biofuels in Europe:     the Common Agricultural Policy</b> .....	590
<b>6.16 Production and use of biofuels</b> .....	591
<b>6.16.1 Ethanol and ETBE</b> .....	591
6.16.1.1 Ethanol production .....	591
6.16.1.2 Blending small quantities of ethanol with gasoline .....	595
6.16.1.3 ETBE production .....	598
6.16.1.4 Behavior of ETBE in use .....	599
6.16.1.5 The future of ETBE .....	599
6.16.1.6 The use of high-ethanol blends .....	599
<b>6.16.2 Acetone-butanol blends</b> .....	601
<b>6.16.3 Oils and their transesterification products</b> .....	602
6.16.3.1 Chemical structure of fats .....	602
6.16.3.2 Vegetable oil production .....	604
6.16.3.3 Some specific chemical transformations of vegetable oils .....	605
6.16.3.4 Use of raw vegetable oils as fuels .....	606
6.16.3.5 The transesterification process .....	608
6.16.3.6 The use of methyl esters as diesel fuel .....	612

<b>6.17</b>	<b>What lies ahead for biofuels?</b> .....	615
6.17.1	<b>Energy characteristics</b> .....	616
6.17.2	<b>Environmental aspects</b> .....	618
6.17.3	<b>Economic aspects</b> .....	619
6.17.4	<b>Geopolitical aspects</b> .....	620
<b>Chapter 7</b>		
	<b>SPECIAL FUELS</b> .....	623
	<i>AVIATION JET FUEL</i> .....	623
<b>7.1</b>	<b>A brief introduction to the world of aviation</b> .....	624
7.1.1	<b>General characteristics of turbines</b> .....	624
7.1.2	<b>Birth and development of aviation</b> .....	625
7.1.3	<b>The classification of fuels</b> .....	626
7.1.3.1	Conventional jet fuels .....	626
7.1.3.2	Special fuels .....	628
7.1.4	<b>Fuel specifications</b> .....	628
<b>7.2</b>	<b>Jet engine operation</b> .....	628
7.2.1	<b>Principles of operation and possible improvements</b> ..	628
7.2.1.1	Thermodynamic analysis .....	628
7.2.1.2	Typical characteristics .....	632
7.2.1.3	The bypass turbojet .....	633
7.2.1.4	Increasing thrust with afterburning .....	635
7.2.2	<b>Combustion techniques</b> .....	637
7.2.2.1	General characteristics .....	637
7.2.2.2	Technological characteristics .....	638
<b>7.3</b>	<b>Jet fuel characteristics</b> .....	639
7.3.1	<b>Properties linked of the type of combustion</b> .....	640
7.3.1.1	Physical characteristics .....	640
7.3.1.2	Thermodynamic characteritics .....	640
7.3.2	<b>Properties related to high-altitude use</b> .....	641
7.3.2.1	Density and heating value .....	642
7.3.2.2	Cold-temperature performance .....	644

7.3.2.3	Evaporation and outgassing risks .....	646
7.3.2.4	Thermal stability .....	647
<b>7.3.3</b>	<b>Safety aspects during storage and distribution .....</b>	<b>649</b>
7.3.3.1	Flash point .....	649
7.3.3.2	Elimination of trace water .....	649
7.3.3.3	Corrosion protection .....	650
7.3.3.4	Oxidation stability .....	651
7.3.3.5	Increasing electrical conductivity .....	652
<b>7.3.4</b>	<b>Jet fuels with high volumetric energy .....</b>	<b>652</b>
7.3.4.1	Major routes to production .....	653
7.3.4.2	Types of products in service .....	654
<b>4</b>	<b>Jet fuel formulation .....</b>	<b>655</b>
7.4.1	Choice of basestocks .....	655
7.4.2	Use of additives .....	656
<b>5</b>	<b>Air transport: fuel consumption and environmental protection .....</b>	<b>658</b>
7.5.1	Energy consumption .....	658
7.5.2	Environmental protection .....	658
7.5.2.1	Noise pollution .....	658
7.5.2.2	Gaseous emissions .....	662
	<b>AVIATION GASOLINE .....</b>	<b>665</b>
<b>6</b>	<b>Quality criteria for aviation gasolines .....</b>	<b>665</b>
7.6.1	Properties related to use .....	666
7.6.2	Properties related to combustion .....	666
7.6.2.1	Classification methods .....	666
7.6.2.2	Quality levels required .....	668
	<b>The formulation and marketing of aviation gasoline .....</b>	<b>669</b>
	<b>AVY FUELS FOR HIGH-POWER DIESEL ENGINE .....</b>	<b>670</b>
	<b>Typical utilization characteristics .....</b>	<b>670</b>
7.8.1	Utilization sectors .....	670
7.8.2	The various types of engines .....	670

7.8.3	Implementation characteristics of these fuels .....	672
7.9	General classification of marine fuel .....	673
7.10	Major quality criteria for marine fuels .....	673
7.10.1	Density .....	674
7.10.2	Viscosity .....	676
7.10.3	Heating value .....	676
7.10.4	Cetane rating–auto-ignition delay .....	678
7.10.5	Compatibility between fuels .....	679
7.10.6	Impurity content .....	681
7.10.6.1	Sulfur content .....	681
7.10.6.2	Carbon residue and asphaltene content .....	681
7.10.6.3	Metals content .....	682
7.10.6.4	Other impurities .....	684
7.10.7	Qualities related to use .....	684
7.11	The formulation of heavy fuels .....	684
	<i>LOW-ENERGY GASES</i> .....	686
7.12	Main characteristics of low-energy gases .....	686
7.13	Usage of low-energy gases as fuels .....	686
	<i>RACING FUELS</i> .....	689
7.14	Properties sought and the types of products in previous use .....	689
7.14.1	Nitroparaffins .....	689
7.14.2	Other products .....	690
7.15	Current specifications for motorsports fuels .....	691
	<i>EXOTIC FUELS</i> .....	696
7.16	Hydrogen .....	696
7.17	Ammonia .....	699
7.18	Acetylene .....	700

**Chapter 8**

**THE FUELS AND ENGINES OF TOMORROW** . . . . . 703

<b>8.1</b>	<b>Quality criteria for fuels</b> . . . . .	704
8.1.1	Octane and cetane ratings . . . . .	704
8.1.2	Chemical composition . . . . .	705
8.1.3	Formulation techniques . . . . .	706
<b>8.2</b>	<b>The evolution of conventional engines</b> . . . . .	707
8.2.1	<b>Spark-ignition engines using stoichiometric combustion</b> . . . . .	707
8.2.1.1	Efficiency improvements . . . . .	707
8.2.1.2	Earlier catalyst light-off . . . . .	709
8.2.2	<b>Lean-burn spark-ignition engines (indirect injection)</b> . . . . .	711
8.2.3	<b>Diesel engines</b> . . . . .	714
<b>8.3</b>	<b>New spark-ignition engine technologies</b> . . . . .	716
8.3.1	<b>Two-stroke engines</b> . . . . .	717
8.3.1.1	Review of two-stroke spark-ignition principles . . . . .	717
8.3.1.2	Research and current applications . . . . .	717
8.3.1.3	Fuels for two-stroke engines . . . . .	720
8.3.1.4	Future possibilities for the two-stroke concept . . . . .	721
8.3.2	<b>Four-stroke spark-ignition engines with direct injection</b> . . . . .	721
<b>4</b>	<b>Towards a new performance-emissions compromise</b> . . . . .	723
<b>5</b>	<b>Alternative fuels</b> . . . . .	724
<b>6</b>	<b>Electric vehicles</b> . . . . .	726
<b>CONCLUSION</b>	. . . . .	729

<b>Annex I</b>	
<b>UNITS OF MEASURE AND THEIR EQUIVALENTS</b> . . . . .	735
<b>International system of units (SI)</b> . . . . .	735
<b>Principles and sub-multiples of SI units</b> . . . . .	736

<b>"Normal" and "standard" conditions</b> .....	736
<b>Major equivalents</b> .....	736
<b>Reference values in current use in the petroleum and gas industries</b> .	738
<b>Energy equivalents (orders of magnitude)</b> .....	739
<b>Vehicle fuel consumption</b> .....	739
<b>Carbon dioxide emission</b> .....	740
<b>Other useful values</b> .....	740

**Annex 2**

<b>MAJOR CHARACTERISTICS OF PETROLEUM CUTS AND VARIOUS PURE PRODUCTS</b> .....	741
--	-----

<b>BIBLIOGRAPHY (Vol. 1 and 2)</b> .....	757
--	-----

<b>INDEX (Vol. 1 and 2)</b> .....	773
-----------------------------------	-----

# Table of contents

## (Volumes 1 and 2)

*The Table of Contents for Volumes 1 and 2 is included at the front of each volume. The Bibliography and the Index for both Volumes 1 and 2 are included at the back of each volume.*

Table of contents (Vol. 2) .....	XXIV
----------------------------------	------

## Volume 1

(p. I to XXXVI and 1 to 386)

<i>Foreword</i> .....	V
<i>Preface</i> .....	IX
<b>Abbreviations and acronyms (Vol. 1 and 2)</b> .....	1
<b>INTRODUCTION</b> .....	7
<b>Transportation on the advent of the year 2000</b> .....	8
<b>Matching engines and fuels: the priority considerations</b> .....	13
<b>The production of fuels</b> .....	14
<b>Environmental protection</b> .....	18

**Chapter 1**

<b>THE PHYSICAL PROPERTIES AND CHEMICAL CHARACTERISTICS OF FUELS</b> .....	21
<b>1.1 A review of the chemistry of hydrocarbons</b> .....	21
<b>1.1.1 General classification</b> .....	22
<b>1.1.2 Chemical formulas and nomenclature</b> .....	23
1.1.2.1 Paraffins or alkanes .....	23
1.1.2.2 Naphthenes or cycloparaffins .....	26
1.1.2.3 Olefins or alkenes .....	27
1.1.2.4 Acetylenics .....	28
1.1.2.5 Aromatics .....	28
<b>1.1.3 Physical properties</b> .....	29
<b>1.1.4 Chemical properties</b> .....	33
1.1.4.1 Chemical reactivity .....	33
1.1.4.2 Major types of reactions .....	33
<b>1.2 Other chemical families</b> .....	37
<b>1.2.1 Oxygenated organic products</b> .....	39
1.2.1.1 Alcohols .....	39
1.2.1.2 Ether-oxides (or ethers) .....	39
1.2.1.3 Aldehydes and ketones .....	40
1.2.1.4 Acids and esters .....	41
<b>1.2.2 Sulfur-containing products</b> .....	42
<b>1.3 Composition and properties of various types of fuels</b> .....	43
<b>1.3.1 General classification</b> .....	43
1.3.1.1 Characterization factor .....	43
1.3.1.2 Average molecular weight .....	46
1.3.1.3 FIA analysis .....	46
1.3.1.4 Bromide number .....	47
1.3.1.5 Maleic anhydride value .....	47
<b>1.3.2 Structural analysis—proportioning of components</b> .	48
<b>1.3.3 Combustion parameters</b> .....	53
1.3.3.1 Stoichiometric combustion equation and stoichiometric ratio .....	53

1.3.3.2	Equivalence ratio: representation, calculation, and importance in various types of combustion processes .....	57
1.3.3.3	Heating value .....	57
1.3.3.4	Exhaust gas composition .....	64

## Chapter 2

<b>REFINING TECHNIQUES</b> .....	71
<b>2.1 Principal characteristics of crude oils</b> .....	71
2.1.1 Crude oil density .....	75
2.1.2 Other physical properties of crude oils .....	75
2.1.3 Overall chemical composition of crude oils .....	76
2.1.4 The presence of impurities and hetero-elements in crude oils .....	76
<b>2.2 The various refining operations</b> .....	78
2.2.1 Separation processes .....	78
2.2.1.1 Primary distillation (at atmospheric pressure) of crude oil .....	78
2.2.1.2 Secondary distillation (under vacuum) of the atmospheric residue .....	80
2.2.1.3 Deasphalting of the vacuum residue .....	80
2.2.2 Conversion processes .....	80
2.2.2.1 Techniques for obtaining specific basestocks .....	80
2.2.2.2 Conversion processes .....	85
2.2.2.3 Hydrotreatment or hydrorefining .....	95
2.2.2.4 Finish treatments .....	99
2.2.3 Obtaining fuels from natural gas .....	100
2.2.3.1 Chemical conversion of natural gas by indirect means .....	100
2.2.3.2 Chemical conversion of natural gas by direct means .....	104
<b>2.3 Global refining: some facts and trends</b> .....	104
2.3.1 Fuel consumption and refining capacity .....	104
2.3.2 Refinery structures. Demand for finished products .....	105

<b>2.3.3 Refining costs</b> .....	107
<b>2.3.4 Energy costs associated with refining</b> .....	110
<b>Chapter 3</b>	
<b>GASOLINE</b> .....	115
<i>HOW THE SPARK-IGNITION ENGINE FUNCTIONS</i> .....	116
<b>3.1 Some milestones in the history of engines and automobiles</b> .	116
<b>3.2 Design and production</b> .....	120
<b>3.2.1 General description</b> .....	120
<b>3.2.2 Technological aspects</b> .....	123
3.2.2.1 Cylinder, piston, and head .....	123
3.2.2.2 Mixture distribution .....	124
3.2.2.3 Cooling .....	124
3.2.2.4 Lubrication .....	124
<b>3.2.3 Supercharging—a special technology</b> .....	126
<b>3.2.4 The ignition system</b> .....	126
3.2.4.1 Electromechanical ignition .....	127
3.2.4.2 Electronic ignition .....	129
3.2.4.3 Fully-electronic ignition .....	129
<b>3.2.5 The fuel system</b> .....	131
3.2.5.1 Carburation .....	131
3.2.5.2 Fuel injection .....	133
3.2.5.3 Mixture control by lambda sensor .....	137
3.2.5.4 OBD self-diagnostics .....	140
<b>3.3 Performance and control</b> .....	140
<b>3.3.1 Power, torque, mean pressure</b> .....	141
3.3.1.1 Effective power .....	141
3.3.1.2 Specific power .....	142
3.3.1.3 Administrative or taxable power .....	142
3.3.1.4 Mean pressure .....	143
<b>3.3.2 Efficiency</b> .....	143
<b>3.3.3 Effective and indicated performance</b> .....	147

<b>3.3.4</b>	<b>Influence of operating and design parameters</b> .....	148
3.3.4.1	Compression ratio .....	149
3.3.4.2	Volumetric efficiency .....	149
3.3.4.3	Engine speed .....	150
3.3.4.4	Air-fuel ratio .....	150
3.3.4.5	Ignition advance .....	151
<b>3.3.5</b>	<b>Engine maps</b> .....	151
<b>3.4</b>	<b>Combustion processes</b> .....	152
<b>3.4.1</b>	<b>Definitions and theoretical considerations</b> .....	153
3.4.1.1	General characteristics .....	153
3.4.1.2	Auto-ignition .....	155
3.4.1.3	Flame propagation .....	158
<b>3.4.2</b>	<b>Normal combustion</b> .....	167
3.4.2.1	General description .....	167
3.4.2.2	Experimental investigative methods .....	169
3.4.2.3	Thermodynamic evaluation .....	171
3.4.2.4	The effect of operating conditions .....	174
<b>3.4.3</b>	<b>Abnormal combustion</b> .....	178
3.4.3.1	Definitions .....	178
3.4.3.2	Knock .....	178
3.4.3.3	Other types of abnormal combustion .....	185
<b>GASOLINE CHARACTERISTICS AND SPECIFICATIONS</b> .....		188
<b>3.5</b>	<b>Physical properties</b> .....	188
<b>3.5.1</b>	<b>Gasoline density</b> .....	188
<b>3.5.2</b>	<b>Gasoline volatility</b> .....	189
3.5.2.1	Classification methods .....	189
3.5.2.2	Vehicle requirements .....	193
3.5.2.3	Gasoline volatility specifications .....	197
<b>3.5.3</b>	<b>Other physical characteristics of gasoline</b> .....	200
3.5.3.1	Viscosity .....	200
3.5.3.2	Heat of vaporization .....	201
<b>3.6</b>	<b>Octane rating</b> .....	202
<b>3.6.1</b>	<b>Some historical notes</b> .....	203

<b>3.6.2</b>	<b>Measurement techniques</b> .....	205
3.6.2.1	General methodology .....	205
3.6.2.2	Reference fuels .....	205
3.6.2.3	Relevance and limitations of comparison methods .....	206
3.6.2.4	CFR engines .....	206
<b>3.6.3</b>	<b>Research and Motor octane numbers</b> .....	208
3.6.3.1	Test conditions for determining RON and MON	208
3.6.3.2	Test method .....	209
3.6.3.3	Thermodynamic parameters. Definition and significance of sensitivity .....	210
3.6.3.4	Accuracy of measurements .....	213
3.6.3.5	Updates to ASTM standards D 2699-86 and D 2700-86 .....	215
<b>3.6.4</b>	<b>Octane numbers for volatile fractions</b> .....	216
<b>3.6.5</b>	<b>Road Octane number</b> .....	217
3.6.5.1	Test procedures .....	217
3.6.5.2	Correlation with conventional octane numbers .....	219
<b>3.6.6</b>	<b>Octane numbers of various organic compounds</b> ...	220
3.6.6.1	Numeric values .....	220
3.6.6.2	Property-structure relationships .....	225
<b>3.6.7</b>	<b>The use of additives to improve octane ratings</b> ....	226
3.6.7.1	Lead alkyls .....	226
3.6.7.2	Other additives that can improve octane ratings .....	230
<b>3.6.8</b>	<b>The octane ratings of commercial fuels</b> .....	232
3.6.8.1	Mandated octane ratings .....	233
3.6.8.2	Identifying products .....	234
<b>3.7</b>	<b>Behavior during storage and distribution</b> .....	234
3.7.1	Oxidation tendencies of gasolines .....	234
3.7.2	Use of antioxidants .....	235
3.7.3	Use of metal deactivators .....	237
<i>GASOLINE BLENDING</i> .....		238
<b>3.8</b>	<b>Characteristics of gasoline basestocks</b> .....	238

05	<b>3.9 Behavior of blends</b> .....	241
05	<b>3.9.1 Blending indexes</b> .....	242
05	<b>3.9.2 Predicting octane ratings of gasolines based</b>	
06	<b>on their composition</b> .....	242
06		
08	<b>3.10 Composition and characteristics of finished products</b> ....	245
08	<b>3.10.1 Leaded and unleaded European gasolines</b> .....	245
09	<b>3.10.2 Improving the quality of gasolines:</b>	
10	<b>refining constraints and flexibility</b> .....	247
13	3.10.2.1 Improving octane ratings .....	247
15	3.10.2.2 Reducing the aromatic and olefin content .....	247
16	<b>3.10.3 The gasoline pool</b> .....	249
16		
17	<i>ENGINE-FUEL MATCHING</i> .....	250
17		
9	<b>3.11 Octane requirements</b> .....	250
0	<b>3.11.1 Definition</b> .....	250
0	<b>3.11.2 Methods of establishing octane requirements</b> .....	251
5	3.11.2.1 General methodologies .....	251
6	3.11.2.2 Families of fuels .....	252
6	<b>3.11.3 Parameters affecting octane requirements</b> .....	253
0	<b>3.11.4 Octane requirement spread</b> .....	255
2	<b>3.11.5 ORI — Octane requirement increase with mileage</b> .	256
3	3.11.5.1 Observation and interpretation .....	256
4	3.11.5.2 Classification procedures .....	256
1	3.11.5.3 Factors affecting ORI .....	258
1		
1	<b>3.12 Controlling knock</b> .....	261
1	<b>3.12.1 Modeling</b> .....	261
1	<b>3.12.2 Technological achievements</b> .....	263
1	3.12.2.1 Ignition advance and compression	
1	ratio compromise .....	264
1	3.12.2.2 Knock detectors .....	265
1	3.12.2.3 Other anti-knock devices .....	266
1	<b>3.12.3 Optimal octane rating</b> .....	269
1		
1	<b>3.13 Operating older vehicles on unleaded fuels</b> .....	270
1	<b>3.13.1 Phenomenon of valve recession</b> .....	270

3.13.2	Possible solutions .....	272
3.14	Controlling intake-system fouling .....	272
3.14.1	Causes and consequences of the fouling phenomenon .....	272
3.14.2	Experimental procedures .....	273
3.14.3	Chemistry of detergent additives .....	275
3.14.4	Effectiveness of detergent additives .....	277
<b>Chapter 4</b>		
<b>DIESEL FUEL</b> .....		279
<i>SPECIFIC CHARACTERISTICS OF DIESEL ENGINES</i> .....		281
4.1	<b>Functional principles and operating conditions</b> .....	281
4.1.1	Some historical notes .....	281
4.1.2	Special characteristics of the diesel cycle .....	282
4.1.3	<b>The fuel supply system</b> .....	284
4.1.3.1	The fuel-injection pump .....	285
4.1.3.2	Fuel injectors .....	290
4.1.4	<b>Establishing the injection rate     for conventional systems</b> .....	294
4.1.4.1	Simplified approach .....	295
4.1.4.2	Accounting for pressure waves .....	296
4.1.4.3	Fuel flow curve .....	297
4.1.4.4	Parasitical phenomena .....	298
4.2	<b>Diesel engine combustion</b> .....	299
4.2.1	<b>Ignition delay</b> .....	300
4.2.1.1	Physical auto-ignition delay .....	301
4.2.1.2	Chemical auto-ignition delay .....	304
4.2.1.3	Numerical expression of the delay .....	304
4.2.2	<b>Auxiliary starting aids</b> .....	305
4.2.3	<b>Progress of combustion</b> .....	306
4.3	<b>Performance and technological achievements</b> .....	308
4.3.1	<b>Direct-injection engines</b> .....	308

4.3.2	<b>Indirect-injection engines</b> .....	310
4.3.3	<b>Supercharging diesel engines</b> .....	312
4.3.4	<b>Exhaust gas recirculation</b> .....	316
<b>CHARACTERISTICS AND SPECIFICATIONS OF DIESEL FUEL</b> .....		317
4.4	<b>Density, volatility, and viscosity</b> .....	317
4.4.1	<b>Density</b> .....	317
4.4.1.1	Average values and variability .....	317
4.4.1.2	Effects on injection and combustion .....	318
4.4.2	<b>Volatility</b> .....	319
4.4.3	<b>Viscosity</b> .....	320
4.5	<b>Cold-temperature characteristics</b> .....	320
4.5.1	<b>Nature of the phenomena involved</b> .....	321
4.5.2	<b>Methods of classifying diesel fuel</b> .....	321
4.5.2.1	Cloud point .....	321
4.5.2.2	Pour point .....	324
4.5.2.3	Cold filter plugging point .....	324
4.5.3	<b>Cold-temperature performance of diesel vehicles</b> ..	326
4.5.3.1	Direct evaluation of the operability temperature limit .....	326
4.5.3.2	Predicting the operability temperature limit by calculation .....	327
4.5.4	<b>Improving the cold-temperature characteristics of diesel fuel</b> .....	327
4.5.4.1	Selection and composition of the diesel fraction .....	328
4.5.4.2	Incorporating additives .....	328
4.5.5	<b>Technologies to improve the cold-temperature operability of diesel engines</b> .....	330
6	<b>Auto-ignition quality</b> .....	330
4.6.1	<b>Historical information</b> .....	331
4.6.2	<b>Measuring the cetane rating using a CFR engine</b> ....	332
4.6.2.1	Principle .....	332
4.6.2.2	Equipment .....	333

4.6.2.3	Operating method . . . . .	334
4.6.2.4	Reporting the results: degrees of precision . . . . .	336
<b>4.6.3</b>	<b>Correlation formulas . . . . .</b>	<b>336</b>
4.6.3.1	Using a single temperature reference point (ASTM D 976) . . . . .	336
4.6.3.2	Using three temperature reference points (ASTM D 4737 or ISO 4264) . . . . .	336
4.6.3.3	Diesel Index . . . . .	337

**4.8 Sulfur content** ..... 362

**4.8.1 Sulfur-content limits and measurement methods** ... 363

**4.8.2 The effect of sulfur on engine wear** ..... 363

        4.8.2.1 Engine corrosion ..... 363

        4.8.2.2 Wear in the fuel-injection system ..... 364

*THE FORMULATION OF DIESEL FUEL* ..... 367

**4.9 Diesel fuel's role in the refinery schema** ..... 367

**4.9.1 Diesel fuel's place among the medium fractions** .... 367

**4.9.2 Characteristics of available basestocks** ..... 368

**4.10 Refining constraints and flexibility** ..... 370

**4.10.1 Cold-temperature characteristics** ..... 370

**4.10.2 Cetane rating** ..... 372

**4.10.3 Sulfur content** ..... 374

**4.11 New trends in the refining of high-quality diesel fuels**... 378

**4.11.1 Hydrocracking** ..... 379

**4.11.2 Hydrotreatments** ..... 380

**4.11.3 Non-conventional means** ..... 381

        4.11.3.1 Oligomerization ..... 384

        4.11.3.2 Fischer-Tropsch synthesis ..... 384

        4.11.3.3 Oxygenated organic compounds ..... 384

**4.12 Characteristics of the finished products** ..... 485
