<i>Foreword</i>	v
<i>Preface</i>	vii
<i>Acknowledgments</i>	ix
<b>1. Non-Destructive Testing of Welds: An Introduction</b>	<b>1</b>
1.1 Definition of weld 1	
Types of weld joints 3	
1.2 Welding processes 3	
Gas welding 3	
Shielded metal-arc welding 3	
Gas tungsten-arc welding 3	
TIG spot welding 4	
Gas metal-arc welding 4	
Submerged arc welding 4	
Resistance welding 4	
Special welding processes 5	
1.3 Weld imperfections and importance of their evaluation 5	
1.4 Defects in welded joints 5	
1.5 Acceptance standards (ASME Section VIII) 8	
1.6 Defects related to microstructure 9	
1.7 Defects associated with residual stresses 9	
1.8 Testing, measurement and control (TMC) of welds 9	
Definitions and scope 9	
Fitness-for-purpose (FFP) approach 10	
Quality classes 10	
Limitations in total defect height 10	
Quality classes for arc welded joints in steel materials 11	
Limitations 11	
Choice of NDT techniques for fitness-for-purpose 11	
1.9 Testing of welded joints 14	
Destructive tests 14	
Non-destructive tests (NDT) 15	
<b>2. Visual Inspection</b>	<b>18</b>
2.1 Basic procedure 19	
2.2 The eye 19	
Visual inspection without aids 20	
2.3 Optical aids used for visual inspection 20	
Microscope 20	
Borescope 21	

Flexible Fibre-Optic Borescope (Flexiscope)	22
Telescope	23
Diffraeto-sight (D-sight)	23
Laser holography and interferometry	24
<b>3. Liquid Penetrant Testing</b>	<b>27</b>
3.1 Types of penetrants	28
3.2 Types of developers	28
3.3 Penetration time	28
3.4 Inspection	28
3.5 Post-removal/ifiable fluorescent penetrant system	29
Solvent removable fluorescent penetrant system	29
Water washable fluorescent penetrant system	29
Low and high temperature penetrants	29
High sensitivity fluorescent penetrant examination	30
3.6 Advanced LPT techniques	30
Ultrasonic pumping to enhance penetrant performance	30
Ultrasonically enhanced penetrant inspection of small weldments	31
Mechanised remote liquid penetrant testing of piping of reactors	31
<b>4. Magnetic Particle Testing</b>	<b>32</b>
4.1 Magnetisation methods	32
4.2 Magnetising current	33
4.3 Inspection of weldments	34
4.4 Automated equipment for specific applications	35
4.5 Demagnetisation after inspection	36
4.6 Methods of demagnetisation	36
Use of diminishing AC field	36
Thermal method	37
AC circular field demagnetisation	37
AC or DC yoke method	37
4.7 Advances in Magnetic Particle Testing (MPT)	38
Composite magnetisation method	38
<b>5. Eddy Current Testing</b>	<b>41</b>
5.1 Instrumentation for ECT	44
5.2 Inspection of welds	47
5.3 Advanced eddy current testing	48
Multi-frequency ECT	48
The 3D phased array ECT	50
Remote field ECT	52
Magnetically biased eddy current	54
Flux leakage	54
5.4 Computer modelling of ECT	54
5.5 Digital signal processing (DSP)	55
5.6 Eddy current imaging	55
Eddy current imaging system	55
Imaging and characterisation of defects	57

Detection of weld centre line	57
Eddy current array instrumentation for fixed position scanning	58
<b>Ultrasonic Testing</b>	<b>62</b>
6.1 Characteristics of ultrasonic waves	63
6.2 Types of ultrasonic waves	63
Longitudinal waves	63
Transverse or shear waves	64
Surface or Rayleigh waves	65
6.3 Generation of ultrasonic waves and types of transducers	65
Materials for probes	66
6.4 Construction of probes	67
Construction of a normal beam probe	67
Construction of an angle beam probe	67
Construction of a transmitter-receiver (TR) probe	68
Angle beam dual probes	68
Focused beam probes	69
Probes with contour corrected soles	69
6.5 Ultrasonic flaw detector	69
Working principle of flaw detector	71
'A scan	71
Test techniques	72
6.6 Ultrasonic testing of weldments	73
Typical test procedure to evaluate a weld joint	73
The 6 dB drop method	74
The 20 dB drop method	77
6.7 Problems faced during ultrasonic testing of welds of certain materials	78
Weld structure	79
Ultrasonic examination of austenitic stainless steel welds	79
The solutions	80
Typical case study	80
Improvements to the existing techniques	81
Signal processing concepts	82
Controlling the weld structure	82
6.8 Advanced ultrasonic testing technology	83
Defect detection with high sensitivity and reliability using advanced signal analysis concepts in ultrasonic testing	83
The B-scan display	87
The C-scan display	87
Synthetic aperture focussing technique (SAFT)	88
Time of flight diffraction technique (TOFD)	91
Phased array probes	94
6.9 Automated pipe scanner for ultrasonic inspection of weldments	95
6.10 Dry couplant technique	97
6.11 Acoustic holography	98
6.12 Tomography	99

- 6.13 Electromagnetic acoustic transducers (EMATs) 100  
 Structure and design of EMATs 101  
 Applications of EMATs 102  
 EMAT generated shear horizontal waves for NDE 103  
 Defect characterisation using EMAT generated SH waves 104  
 Limitations of EMATs 105
- 7. Radiography Testing 107**
- 7.1 Basic principle 107  
 7.2 Geometric factors in radiography 108  
 7.3 X-radiography 109  
 Industrial X-ray tubes 110  
 X-ray equipment 110  
 Types of X-ray tubes 111  
 Focal spot 111  
 Target 111  
 Rod anode 112  
 7.4 Gamma rays 112  
 Equipment design 112  
 Advantages and limitations of gamma ray sources 113  
 7.5 Penetrators 114  
 7.6 Industrial X-ray films 114  
 7.7 Screens 116  
 7.8 Film viewers 116  
 7.9 Characteristic curve 116  
 7.10 Radiographic defect evaluation 116  
 7.11 Applications 117  
 Butt welds 117  
 Fillet welds 118  
 Fusion welds on pipes and cylindrical objects 118  
 7.12 Advances in radiography 120  
 High resolution radiography 120  
 High energy radiography 128  
 Electron linear accelerator (LINAC) 129  
 Real time radiography 129  
 Image processing 131
- 8. Acoustic Emission Technique 133**
- 8.1 On-line monitoring of welds by acoustic emission 134  
 8.2 Experimental setup 135  
 8.3 Advantages of AET for weld monitoring 136  
 8.4 Welding noise 137  
 8.5 Applications of AET for monitoring welding process 138  
 TIG welding 138  
 Submerged arc welding (SAW) 138  
 Electroslag welding (ESW) 138  
 Electron beam welding 139  
 Laser spot welding 141  
 Resistance spot welding 141
- 9 AET for structural integrity monitoring 142  
 Typical AE monitoring during hydrotesting of waste stripper 143  
 AE monitoring during hydrotesting of Horton sphere 143  
 On-line monitoring of a chemical vessel using AET 144
- 9. Leak Testing 146**
- 9.1 Pressure tests 146  
 Methods of pressure leak detection 146  
 Types of pressure tests 146  
 9.2 Halogen, hydrogen and SF<sub>6</sub> (sulphur hexa-fluoride) detectors 147  
 Halogen leak detectors 147  
 SF<sub>6</sub> detector 148  
 Thermal conductivity leak detector 149  
 Mass spectrometer leak detector 149  
 9.3 Helium leak testing of a large volume pipeline: A typical case study 150
- 10. Thermography Testing 155**
- 10.1 Basic Principle 155  
 10.2 Detectors and equipment 156  
 10.3 Techniques 157  
 10.4 Applications 157
- 11. In-Situ Metallography 159**
- 11.1 Selection criteria of sites for *in-situ* metallography 160  
 11.2 Replication process 161  
 11.3 Significance of microstructural observations 161  
 11.4 Decision making 162  
 11.5 Applications 162  
 11.6 Typical Case Studies 162
- 12. Residual Stress Analysis in Weldments 166**
- 12.1 Different sources of welding stresses 166  
 Shrinkage residual stresses 166  
 Transformation residual stresses 167  
 12.2 Residual stress distribution in pipes 168  
 12.3 Residual stress relieving methods 169  
 12.4 Residual stress measuring methods/techniques 169  
 Classification of methods for measuring residual stresses 169  
 Mechanical methods 169  
 12.5 Diffraction methods 169  
 X-ray diffraction method 170  
 Neutron diffraction method 177  
 12.6 Ultrasonic methods 178  
 Pulse echo-overlap method 179  
 12.7 Handbook on residual stress analysis 179

12.8 Typical Case Studies	185		
Evaluation of residual stresses in weldments using NDT techniques	185		
<b>13. Automation and Robots in NDT</b>		<b>190</b>	
13.1 Manipulator arm operation	193		
13.2 Control system	193		
13.3 Memory	194		
13.4 Applications of robots	194		
Robots in non-destructive evaluation	194		
Developments of ultrasonic scanners/manipulators for inspection of welded components	194		
Internal rotary inspection system (IRIS)	195		
Automated ultrasonic testing of feed water nozzle of boiling water nuclear reactor	198		
In-service inspection of reactor pressure vessels	199		
NDT of thin tubes	200		
Automatic/semi-automatic ultrasonic testing for nuclear power plants	202		
Remote operated vehicles (ROV): A driving force for reduced outages	203		
<b>14. Computers in Weld Inspection Technology</b>		<b>205</b>	
14.1 Analysis of weld design	205		
14.2 Sizing of welds	205		
14.3 Optimisation of stiffeners	206		
14.4 Analysis of weld sequencing	206		
14.5 Analysis of residual stresses	206		
14.6 Computer based NDT systems	207		
<b>15. Intelligent Welding</b>		<b>208</b>	
15.1 Perspective	208		
15.2 Penetration sensing and control during orbital tube welding by weld pool oscillation	210		
15.3 Fuzzy logic control of resistance spot welding	211		
15.4 NDE sensors for process control	213		
<b>16. Fracture Mechanics Concepts</b>		<b>220</b>	
16.1 Fatigue life prediction of welded joints in steel structures	221		
Weld toe discontinuity	221		
Initiation period	221		
Crack growth period	222		
Influence of weld geometry	222		
16.2 Fitness for purpose	222		
16.3 Acceptance levels	222		
16.4 Defect schematisation	223		
16.5 Determination of critical defect size	223		
<b>17. Weld Related Failures: Case Studies</b>			<b>2</b>
17.1 Failure analysis of an ammonia refrigerant condenser tube	226		
17.2 Failure analysis of carbon dioxide branch line in a urea plant	229		
17.3 Failure analysis of a stainless steel reducer	230		
17.4 Conclusion	232		
<b>18. Quality Control in Production Welding</b>			<b>2</b>
18.1 Quality assurance	234		
18.2 Quality control	235		
Quality control before welding	235		
Quality control during welding	236		
Quality control after welding	236		
18.3 Statistical quality control	237		
Chance variation	237		
Assignable variation	237		
Control charts	238		
18.4 Total quality management	241		
18.5 Taguchi concepts in quality control	242		
Basic concepts	242		
<b>19. Welding Codes and Standards</b>			<b>2</b>
19.1 Code	244		
19.2 Standard	244		
19.3 Specifications	244		
19.4 ASME boiler and pressure vessel code	245		
19.5 Constitution of ASME code	245		
19.6 Structural welding code	246		
19.7 Appendix I: Compilation of standards on weld testing	247		
19.8 Appendix II: ASTM material specifications for welded components with NDT requirements	250
