

# **Ship-Shaped Offshore Installations**

**Design, Building, and Operation**

CAMBRIDGE

## Contents

	<i>page</i>
Preface	xv
Acknowledgments	xix
How to Use This Book	xxi
<b>1 Overview of Ship-Shaped Offshore Installations . . . . .</b>	<b>1</b>
1.1 Historical Overview of Offshore Structure Developments	1
1.1.1 Early History	1
1.1.2 History from World War II to the Early 1970s	1
1.1.3 History after the Early 1970s	2
1.2 Process of Offshore Oil and Gas Developments	3
1.3 System Concepts for Deep- and Ultradeep-Water Field Developments	4
1.3.1 Semisubmersibles	5
1.3.2 Spars	6
1.3.3 Tension Leg Platforms	7
1.3.4 Ship-Shaped Offshore Units	7
1.4 A Brief History of the FPSO Installations	9
1.5 Trading Tankers versus Ship-Shaped Offshore Units	13
1.6 New Build versus Tanker Conversion	15
1.7 Layout and General Arrangement of FPSOs	16
1.7.1 Deck Area and General Arrangement	16
1.7.2 Layout	16
1.7.3 Relationships between Principal Dimensions	19
1.7.4 Double-Hull Arrangements	22
1.7.5 Tank Design and Arrangements	22
1.8 Longitudinal Strength Characteristics of FPSO Hulls	23
1.9 Drawings of a Hypothetical FPSO	24
1.10 Aims and Scope of This Book	28
References	29
<b>2 Front-End Engineering . . . . .</b>	<b>31</b>
2.1 Introduction	31
2.2 Initial Planning and Contracting Strategies	32
2.3 Engineering and Design	33
2.4 Principal Aspects Driving Project and Vessel Costs	34

2.6	Site-Specific Meteorological Data	33
2.7	Process Facility Design Parameters	36
2.8	Limit-State Design Requirements	36
2.9	Risk Assessment Requirements	37
2.10	Project Management	38
2.11	Post-Bid Schedule and Management	39
2.12	Building Material Issues: Yield Stress	39
2.13	Building Material Issues: Fracture Toughness	41
2.14	Hull Structural Scantling Issues	42
2.15	Action-Effect Analysis Issues	43
2.16	Fatigue Design Issues	44
2.17	Hydrodynamic Impact-Pressure Action Issues: Sloshing, Slamming, and Green Water	45
2.18	Vessel Motion and Station-Keeping Issues	45
2.19	Topsides Design Issues	46
2.20	Mooring System Design Issues	47
2.21	Export System Design Issues	47
2.22	Corrosion Issues	48
2.23	Accommodation Design Issues	48
2.24	Construction Issues	49
2.25	Equipment Testing Issues	49
2.26	Towing Issues	50
2.27	Field Installation and Commissioning Issues	50
2.28	Inspection and Maintenance Issues	51
2.29	Regulations and Classing Issues	52
	References	53
<b>Design Principles, Criteria, and Regulations</b>	.....	55
3.1	Introduction	55
3.2	Structural Design Principles	55
3.2.1	Working Stress Design	56
3.2.2	Limit State Design	56
3.2.3	Critical Buckling Strength Design	57
3.2.4	Comparison among the Three Design Methods	60
3.3	Limit State Criteria for Structural Design and Strength Assessment	65
3.4	Probabilistic Format versus Partial Safety Factor Format	65
3.4.1	Probabilistic Format	67
3.4.2	Partial Safety Factor Format	68
3.4.3	Considerations Related to Safety Factors	71
3.5	Unified Design Requirements for Trading Tanker Hull Structures	74
3.6	Design Principles for Stability	74
3.7	Design Principles for Towing and Station-Keeping	75
3.8	Design Principles for Vessel Motions	75
3.9	Design Principles for Safety, Health, and the Environment	76
3.9.1	Design Principles for Safety	77
3.9.2	Design Principles for Health	77
3.9.3	Design Principles for the Environment	77
<b>4 Environmental Phenomena and Application to Design</b>	.....	82
4.1	Introduction	82
4.2	Environmental Data	83
4.3	Waves	84
4.3.1	UKOOA FPSO Design Guidance Notes for UKCS Service	85
4.3.2	American Petroleum Institute Recommended Practices	86
4.3.3	Det Norske Veritas Classification Notes	88
4.4	Winds	91
4.5	Water Depths and Tidal Levels	91
4.6	Currents	93
4.7	Air and Sea Temperatures	93
4.8	Snow and Icing	95
4.9	Marine Growth	96
4.10	Tank Sloshing	96
4.10.1	Fundamentals	96
4.10.2	Practices for Sloshing Assessment	99
4.10.3	Measures for Bow-Sloshing Risk Mitigation	99
4.11	Bow Slamming	99
4.11.1	Fundamentals	99
4.11.2	Practices for Bow-Slamming Assessment	100
4.11.3	Measures for Bow-Slamming Risk Mitigation	100
4.12	Green Water	100
4.12.1	Fundamentals	101
4.12.2	Practices for Green-Water Assessment	102
4.12.3	Measures for Green-Water Risk Mitigation	103
4.13	Considerations Related to the Return Period	103
4.14	Wave Energy Spectra Expressions	105
4.14.1	The Generalized Pierson-Moskowitz Spectrum	105
4.14.2	The JONSWAP Spectrum	106
4.14.3	Directional Wave Spectra	106
4.15	Design Basis Environmental Conditions	107
	References	107
<b>5 Serviceability Limit-State Design</b>	.....	111
5.1	Introduction	111
5.2	Design Principles and Criteria	112
5.3	Practices for Actions and Action-Effects Analysis	113
5.4	Elastic Deflection Limits: Under Quasistatic Actions	114
5.4.1	Support Members	114
5.4.2	Plates between Support Members	118
5.5	Elastic Buckling Limits	118
5.5.1	Elastic Plate Buckling	120
5.5.2	Elastic Stiffener Web Buckling	123
5.5.3	Elastic Tripping of Stiffener	125
5.5.4	Elastic Sustained Flange Buckling	128

## 5.6 Permanent Set Deflection Limits: Under Impact Pressure Actions

128

- (1) Nodal Forces and Nodal Displacements
- (2) Strain versus Displacement Relationship
- (3) Stress versus Strain Relationship

1 1 1

5.6.1 Plates between Support Members	129
5.6.2 Longitudinally Stiffened Panels between Transverse Frames	131

### 5.6.3 Cross-Stiffened Plate Structures

#### 5.6.4 Illustrative Examples

### 5.7 Intact Vessel Stability

#### 5.8 Vessel Station-Keeping

#### 5.9 Vessel Weatherwaving and Heading Control

#### 5.10 Vessel Motion Exceedance

#### 5.11 Vibration and Noise

#### 5.12 Mooring Line Vortex-Induced Resonance Oscillation

#### 5.13 Corrosion Wastage

### References

## 6 Ultimate Limit-State Design . . . . .

148

### 6.1 Introduction

#### 6.2 Design Principles and Criteria

#### 6.3 Actions and Action-Effects Analysis

#### 6.4 Structural Component Configuration

#### 6.5 Ultimate Strength of Plates

#### 6.5.1 Fundamentals

#### 6.5.2 Closed-Form Expressions

#### 6.5.3 Analytical Methods

#### 6.5.4 Semianalytical Methods

#### 6.5.5 Nonlinear Finite-Element Methods

#### 6.5.6 Illustrative Examples

#### 6.6 Ultimate Strength of Stiffened Plate Structures

##### 6.6.1 Fundamentals

##### 6.6.2 Closed-Form Expressions

##### 6.6.3 Analytical Methods

##### 6.6.4 Semianalytical Methods

##### 6.6.5 Nonlinear Finite-Element Methods

##### 6.6.6 Illustrative Examples

#### 6.7 Ultimate Strength of Vessel Hulls

##### 6.7.1 Fundamentals

##### 6.7.2 Closed-Form Expressions

#### 6.7.3 Progressive Hull Collapse Analysis: Idealized Structural Unit Method

##### 6.7.3.1 Background of Idealized Structural Unit Method

##### 6.7.3.2 ISUM Plate Element

##### (1) Nodal Forces and Nodal Displacements

##### (2) Strain versus Displacement Relationship

##### (3) Stress versus Strain Relationship

##### (4) Tangent Stiffness Equation

##### (5) Displacement (Shape) Function

##### (6) Failure State Considerations

##### (7) Post-Ultimate Strength Behavior

##### (8) Benchmark Study of the Beam-Column Element

##### Illustrative Examples

###### (1) Test Hull Models under Vertical Bending

###### (2) An FPSO Hull under Vertical Bending

###### (3) A Shuttle Tanker Hull under Combined Vertical and Horizontal Bending

### References

## 7 Fatigue Limit-State Design . . . . .

148

### 7.1 Introduction

#### 7.2 Design Principles and Criteria

#### 7.2.1 Cyclic Stress Ranges

#### 7.2.2 S-N Curves

#### 7.2.3 Fatigue Damage Accumulation

#### 7.3 Practices for Spectral-Analysis-Based FLS Design

#### 7.4 Seakeeping Analysis

#### 7.5 Stress Range Transfer Functions

#### 7.6 Global Structural Analysis

#### 7.7 Local Structural Analysis and Hot Spot Stress Calculations

#### 7.7.1 Definition of Hot Spot Stress

#### 7.7.2 Finite-Element Analysis Modeling

#### 7.8 Selection of S-N Curves

#### 7.9 Fatigue Damage Calculations

#### 7.10 High-Cycle Fatigue versus Low-Cycle Fatigue

#### 7.11 Time-Variant Fatigue Crack Propagation Models

### References

## 8 Accidental Limit-State Design . . . . .

182

### 8.1 Introduction

#### 8.2 Design Principles and Criteria

#### 8.3 Damaged Vessel Stability: Accidental Flooding

#### 8.4 Collisions

#### 8.4.1 Fundamentals

#### 8.4.2 Practices for Collision Assessment

#### 8.4.3 Nonlinear Finite-Element Modeling Techniques

#### 8.4.4 Dynamic Material Properties

#### 8.4.5 Illustrative Examples

#### 8.5 Dropped Objects

#### 8.5.1 Fundamentals

<b>Plates</b>	293
8.5.3.1 Under Axial Compressive Loads	293
8.5.3.2 Under Edge Shear Loads	296
<b>8.6 Fire</b>	296
8.6.1 Fundamentals	297
8.6.2 Practices for Fire Assessment	299
<b>8.7 Gass Explosion</b>	299
8.7.1 Fundamentals	299
8.7.2 Practices for Gas Explosion Action Analysis	301
8.7.2.1 Prescriptive Methods	301
8.7.2.2 Probabilistic Methods	302
8.7.3 Practices for Gas Explosion Consequence Analysis	303
8.7.4 Illustrative Examples	303
<b>8.8 Progressive Collapse of Heeled Hulls with Accidental Flooding</b>	308
<b>8.9 Considerations for ALS Applications to Ship-Shaped Offshore Units</b>	313
<b>References</b>	313
<b>Topsides, Mooring, and Export Facilities Design</b>	318
9.1 Introduction	318
9.2 Topsides Facilities	319
9.2.1 Oil and Water Separation Facilities	319
9.2.2 Gas Compression Facilities	323
9.2.3 Water Injection Facilities	324
9.2.4 Cargo Handling Systems	324
9.2.5 Utility and Support Systems	325
9.2.6 Safeguard Systems	326
9.3 Structural Design and Fabrication Considerations for Topsides and Their Interfaces with the Hull	327
9.3.1 Types of Topsides Supports	327
9.3.1.1 Multipoint Support Columns	328
9.3.1.2 Sliding/Flexible Support Stools	329
9.3.1.3 Transverse Girder Supports	330
9.3.2 Types of Topsides Flooring	330
9.3.3 Types of Topsides Fabrication	331
9.3.3.1 Built-In Grillage Deck	332
9.3.3.2 Preassembled Units	332
9.3.4 Structural Analysis of Topsides Modules and Interfaces	332
9.3.5 Interface Management and Other Lessons Learned	333
9.4 Mooring Facilities	336
9.4.1 Types of Moorings	336
9.4.1.1 Spread Moorings	337
9.4.1.2 Single-Point Moorings	338
(1) Fixed Tower	338
(2) C&IM	338
(3) S&IM	340
(4) A&I <sup>P</sup>	340
(5) SP&R	342
<b>9.5 Export Facilities</b>	350
9.5.1 Methods of Export	350
9.5.2 Types of Shuttle Tanker Export	351
9.5.3 Design Considerations for Export Systems	352
<b>References</b>	354
<b>10 Corrosion Assessment and Management</b>	356
10.1 Introduction	356
10.2 Marine Corrosion Mechanisms	357
10.2.1 Fundamentals	357
10.2.2 Types of Corrosion	358
10.2.2.1 General Corrosion	359
10.2.2.2 Pitting Corrosion	360
10.2.2.3 Grooving	361
10.2.2.4 Weld Metal Corrosion	361
10.2.3 Factors Affecting Corrosion	361
10.3 Mathematical Models for Corrosion Wastage Prediction	364
10.3.1 Overall Behavior of Corrosion	365
10.3.2 Mechanical Models	366
10.3.2.1 Corrosion Depth Formulations	366
10.3.2.2 Data Collection of Corrosion Measurements	367
10.3.2.3 Characteristics of Observed Corrosion Wastage	371
10.3.2.4 Annualized Corrosion Rates	374
10.3.3 Phenomenological Models	379
10.4 Options for Corrosion Management	382
10.4.1 Corrosion Margin Addition	383
10.4.2 Coating	386
10.4.2.1 Surface Preparation	386
10.4.2.2 Types of Coating	387
10.4.2.3 Selection Criteria of Coating Material	389
10.4.2.4 Methodologies for Coating-Life Prediction	390
10.4.3 Cathodic Protection	391
10.4.4 Ballast Water Deoxygenation	393
10.4.5 Chemical Inhibitors	395
<b>References</b>	395
<b>11 Inspection and Maintenance</b>	400
11.1 Introduction	400
11.2 Types of Age-Related Deterioration	401
11.3 Methods for Damage Examination	402
11.3.1 Corrosion Wastage Examination	402
11.3.2 Fatigue and Other Crack Examination	404
11.3.3 Mechanical Damage Examination	405
11.3.4 Probability of Detection and Sizing	405
11.4 Recommended Practices for Shelling Tankers	406

11.4.3 Emergency Response Services	411	12.3 Decommissioning	456
11.4.4 Ship Inspection Report Programme	411	12.3.1 Regulatory Framework	457
<b>5 Risk-Based Inspection</b>		12.3.2 Technical Feasibility Issues	458
11.5.1 RBI Team Setup	411	12.3.3 Safety and Health Issues	459
11.5.2 Component Grouping and Baselining	412	12.3.4 Environmental Issues	459
11.5.3 Risk-Based Prioritization	413	12.3.5 Cost Issues	460
11.5.4 Inspection Plan Development	414	12.3.6 Decommissioning Practices for Ship-Shaped Offshore Installations	460
11.5.4.1 Inspection Strategy	414	References	460
11.5.4.2 Scope of Inspection	414		
11.5.4.3 Frequency of Inspection	415		
11.5.5 Inspection Execution	415		
11.5.6 Analysis of Inspection Results	415		
<b>6 Risk-Based Program Updating</b>			
11.6.1 Time-Variant Failure Mechanisms	416	13.1 Introduction	463
11.6.2 Planned Maintenance	417	13.2 Process for Formal Safety Assessment	464
11.6.3 Condition Monitoring	419	13.2.1 System Definition	465
11.6.4 Combination of Planned Maintenance and Condition Monitoring	421	13.2.2 Hazard Identification	465
11.6.5 Failure Finding	421	13.2.3 Risk Assessment	469
11.7 Recommended Practices for Ship-Shaped Offshore Units	423	13.2.4 Risk-Management Options	470
11.7.1 Inspection Practices	423	13.2.5 Cost-Benefit Analysis	470
11.7.2 Maintenance Practices	425	13.2.6 Decision-Making Recommendations	471
11.7.3 Reliability Assessment	428	13.3 Qualitative Risk Assessment	472
11.7.4 Risk-Based Maintenance	431	13.4 Quantitative Risk Assessment	475
11.7.5 Risk-Based Inspection	431	13.4.1 Frequency Analysis	476
11.7.6 Risk-Based Condition Monitoring	431	13.4.2 Consequence Analysis	479
11.7.7 Risk-Based Maintenance Planning	431	13.4.3 Risk Representation	480
11.7.8 Risk-Based Offshore Unit Management	431	13.5 Risk Management during Design	482
11.7.9 Risk-Based Offshore Unit Reliability	431	13.5.1 Selection of Materials	483
11.7.10 Risk-Based Offshore Unit Safety	431	13.5.2 Layout for Hazard Impact Minimization	483
11.7.11 Risk-Based Offshore Unit Sustainability	431	13.5.3 Limit-State Design	483
11.7.12 Risk-Based Offshore Unit Environmental Impact	431	13.5.4 Passive Safeguards for Fire and Explosion	484
11.7.13 Risk-Based Offshore Unit Economic Viability	431	13.5.5 Accelerated Degradation Protection	484
11.7.14 Risk-Based Offshore Unit Social Acceptability	431	13.6 Risk Management during Operation	484
11.7.15 Risk-Based Offshore Unit Technological Feasibility	431	13.6.1 Collisions	484
11.7.16 Risk-Based Offshore Unit Legal Requirements	431	13.6.2 Dropped Objects	485
11.7.17 Risk-Based Offshore Unit Financial Feasibility	431	13.6.3 Active Safeguards for Fire and Explosion	485
11.7.18 Risk-Based Offshore Unit Operational Feasibility	431	13.6.4 Inspection and Maintenance	485
11.7.19 Risk-Based Offshore Unit Environmental Feasibility	431	References	486
<b>Tanker Conversion and Decommissioning</b>	447		
1 Introduction	447		
2 Tanker Conversion	448		
12.2.1 Selection of Suitable Tankers	449	Appendix 1. Terms and Definitions	489
12.2.2 Condition Assessment of Aged Tanker Hull Structures	450	Appendix 2. Scale Definitions of Winds, Waves, and Swells	503
12.2.2.1 Inspection and Maintenance	450	A2.1 Beaufort Wind Scale	503
12.2.2.2 Renewal Scantlings for Tanker Conversion	452	A2.2 Wave Scale	503
12.2.2.3 Repair of Defects, Dents, Pitting, Gouging, and Cracks	453	A2.3 Swell Scale	504
12.2.3 Residual Strength Assessment	453		
Appendix 3. Probability of Sea States at Various Ocean Regions			505

A3.5 Characteristics of 100-Year Return Period Storms at Various Ocean Regions	509
A3.6 Extremes of Environmental Phenomena at Various Ocean Regions	510
Appendix 4. Scaling Laws for Physical Model Testing . . . . .	511
A4.1 Hydrodynamics Model Tests	511
A4.1.1 Froude Scaling Law	511
A4.1.2 Reynolds Scaling Law	511
A4.1.3 Vortex-Shedding Effects	512
A4.1.4 Surface Tension Effects	512
A4.1.5 Compressibility Effects	513
A4.2 Structural Mechanics Model Tests	513
Appendix 5. Wind-Tunnel Test Requirements . . . . .	514
Appendix 6. List of Selected Industry Standards . . . . .	515
Index	531
