## feature articles

### 29 Isotropic Sintering Shrinkage in Pressed Compact of Near-Spherical Alumina Particles

*The particle shape of powders is important in shrinkage behavior, and isotropic shrinkage can be achieved by post-CIP treatments.*

Anze Shui, Zenji Kato, Satoshi Tanaka, Nozomu Uchida and Keizo Uematsu

### 33 Microstructure and Corrosion Performance of Crown Silica Brick Under Oxyfuel Combustion

*A reproducible oxyfuel simulation test has been developed for testing superstructure refractories under conditions close to that of the industry, allowing evaluation of various conventional and experimental refractories.*

M. Velez, J.M. Almanza and M. Karakus

### 41 Effect of Cobalt Oxide and Copper Oxide Additions to Zinc-Containing Soft Porcelain Glazes

*Transition-metal oxides provide color and attractive appearance to zinc-containing soft porcelain crystal glazes, and their effect can vary depending on firing conditions.*

Bekir Karasu and Servet Turan

### 46 Frost Resistance of Brick

*Knowledge about the relationship between pore structure and frost resistance is the first step to the production of high-frost-resistance brick products.*

Mikuláš Šveda
