feature articles

- 23 SG773 Borosilicate Lighting Glass**
Corporate Environmental Achievement Award Winner: Osram Sylvania
 Richard C. Marlor
- 24 Controlling Glaze Surface Effects**
Variations in glass, texture and crystal concentrations over the surface of a glaze can improve its aesthetics.
 Richard A. Eppler
- 30 Glass Art Reflects the Future**
Exhibit at New York State College of Ceramics at Alfred University relates art and science of glass.
 Margaret Rasmussen
- 38 PbTiO₃ Nanosized Ceramics**
Lead titanate powders have been prepared using the sol-gel method with lead lactate as the lead precursor.
 D.S. Yu and J.C. Han
- 40 Kaolin, Metakaolin and Microsilica as Fillers for High-Alumina Refractory Castables**
Although the total replacement of microsilica by kaolin or metakaolin degrades the high-temperature behavior of high-alumina castables, a partial substitution can be attractive when microsilica is expensive, because this substitution can significantly decrease the refractory cost yet maintain an acceptable mechanical strength.
 M.V. Gerotto, A.R. Studart, M.D.M. Innocentini, V.C. Pandolfelli and S.S. Cabo
- 50 Polishing Porcelain Tile, Part 1: Wear Mechanism**
Exhaustive sampling has been accomplished along the length of an industrial porcelain-tile polishing line to determine the changes that result in the tile surface during the polishing operation.
 E. Sánchez, J. García-Ten, M.J. Ibáñez, M.J. Orts, V. Cantavella, J. Sánchez and C. Soler
- 55 Characterization of RCP Glaze System**
Two rutile-calcium phosphate glaze systems with different quantities of rutile were prepared and analyzed. α-cristobalite, α-zinc titanium oxide and hydrocalumite were the common crystalline phases identified. They had higher rutile content and, hence, higher opacity and whiteness.
 M.S. Fofanah, Wu Qi Jiu and Zhuang Zhiqiang
