<b>Preface</b>	<b>v</b>
<b>1 Graphics Programming</b>	<b>1</b>
1.1 Think Geometrically! . . . . .	1
1.2 OpenGL . . . . .	4
1.3 The Programming Language C++ . . . . .	5
1.4 How to Develop Solid Code . . . . .	22
1.5 The Implementation of a Vector . . . . .	25
1.6 Classes That Contain Dynamic Memory . . . . .	29
<b>2 Getting Started</b>	<b>35</b>
2.1 A Simple 2D Program . . . . .	35
2.2 A Simple 3D Program . . . . .	42
2.3 Simple Animations . . . . .	47
2.4 What to Do with Existing OpenGL Code . . . . .	53
<b>3 Basic Objects</b>	<b>61</b>
3.1 Some Useful Routines . . . . .	61
3.2 Vectors and Points . . . . .	73

3.3	Straight Lines . . . . .	80
3.4	Planes . . . . .	87
3.5	Geometrical “Objects” . . . . .	88
3.6	Circles . . . . .	92
<b>4</b>	<b>Curved Lines and Polygons</b>	<b>99</b>
4.1	Polylines, Path Curves, Parameterized Curves . . . . .	99
4.2	Spline Curves . . . . .	105
4.3	Closed Polygons . . . . .	109
4.4	Texture Mapping . . . . .	112
4.5	Complex Polygons, Tessellation . . . . .	116
4.6	Conics . . . . .	123
<b>5</b>	<b>Primitive Elements in Space</b>	<b>129</b>
5.1	Boxes . . . . .	129
5.2	Prisms and Pyramids . . . . .	132
5.3	Spheres . . . . .	136
5.4	Groups of 3D Objects . . . . .	140
5.5	The Virtual Camera . . . . .	143
<b>6</b>	<b>Complex Surfaces</b>	<b>151</b>
6.1	Parameterized Surfaces . . . . .	151
6.2	Swept Surfaces . . . . .	161
6.3	Surfaces of Revolution . . . . .	167
6.4	Helical Surfaces . . . . .	169
6.5	Tubular Surfaces . . . . .	172
6.6	Function Graphs . . . . .	175
<b>7</b>	<b>Solids</b>	<b>179</b>
7.1	What Is a Solid? . . . . .	179
7.2	How to Represent Solids . . . . .	180
7.3	Boundary Representation of Polyhedral Models . . . . .	183
7.4	Polyhedra in OPEN GEOMETRY . . . . .	187
7.5	Consistency Conditions for Polyhedra . . . . .	190

---

<b>8</b>	<b>Boolean Operations</b>	<b>193</b>
8.1	Types of Boolean Operations . . . . .	193
8.2	Three Main Steps . . . . .	195
8.3	Intersection of Faces, Generic Case . . . . .	197
8.4	The Geometry of Particular Cases . . . . .	200
8.5	Intersection of Faces, Particular Cases . . . . .	205
8.6	Steps Two and Three . . . . .	211
8.7	Practical Applications . . . . .	215
<b>9</b>	<b>Kinematics—Geometry of Motion</b>	<b>229</b>
9.1	Basic Concepts of Planar Kinematics . . . . .	229
9.2	Theory of Curvature . . . . .	233
9.3	The Elliptic Motion . . . . .	235
9.4	The Trochoid Motion . . . . .	238
9.5	The Coupler Motion . . . . .	242
9.6	Special Four-Bar Linkages . . . . .	245
9.7	Sample Kinematics Programs . . . . .	247
9.8	Geometry of Gearing . . . . .	260
<b>10</b>	<b>Interesting Classes of Surfaces</b>	<b>269</b>
10.1	Spiral Surfaces . . . . .	269
10.2	Helispiral Surfaces . . . . .	280
10.3	DUPIN-Cyclides . . . . .	295
10.4	Rotoid Surfaces . . . . .	302
<b>11</b>	<b>Data Exchange, Printouts</b>	<b>307</b>
11.1	DXF File Output . . . . .	307
11.2	How to Import 3D Objects from 3D STUDIO . . . . .	308
11.3	How to Add Textures to Your Objects . . . . .	316
11.4	Export as BMP File, Animated GIF Files . . . . .	318
11.5	How to Make Proper Printouts . . . . .	320

<b>12 More Classes and Examples</b>	<b>323</b>
12.1 Sample 2D Programs . . . . .	323
12.2 Sample 3D-Programs . . . . .	332
