

THE IMA VOLUMES IN MATHEMATICS
AND ITS APPLICATIONS

EDITORS Mark Johnson
Sanjeev P. Khudanpur
Mari Ostendorf
Roni Rosenfeld

**Mathematical
Foundations of
Speech and
Language
Processing**

Springer

CONTENTS

Foreword	v
Preface	vii
Probability and statistics in computational linguistics, a brief review	1
<i>Stuart Geman and Mark Johnson</i>	
Three issues in modern language modeling	27
<i>Dietrich Klakow</i>	
Stochastic analysis of Structured Language Modeling	37
<i>Frederick Jelinek</i>	
Latent semantic language modeling for speech recognition	73
<i>Jerome R. Bellegarda</i>	
Prosody modeling for automatic speech recognition and understanding	105
<i>Elizabeth Shriberg and Andreas Stolcke</i>	
Switching dynamic system models for speech articulation and acoustics	115
<i>Li Deng</i>	
Segmental HMMS: Modeling dynamics and underlying structure in speech	135
<i>Wendy J. Holmes</i>	
Modelling graph-based observation spaces for segment-based speech recognition	157
<i>James R. Glass</i>	
Towards robust and adaptive speech recognition models	169
<i>Herve Bourlard, Samy Bengio, and Katrin Weber</i>	

Graphical models and automatic speech recognition	191
<i>Jeffrey A. Bilmes</i>	
An introduction to Markov chain Monte Carlo methods	247
<i>Julian Besag</i>	
Semiparametric filtering in speech processing	271
<i>Benjamin Kedem and Konstantinos Fokianos</i>	
List of workshop participants	283
