1 AI and expert systems: a brief history **1**
1.1 Introduction 1
1.2 The beginnings of AI 1
1.3 General problem-solving AI programs 2
1.4 The birth of KBS 3
1.5 The emergence of commercial expert systems 4
1.6 AI into the twenty-first century 5
1.7 Human expertise compared with expert systems 6
1.8 Benefits of expert systems 8
1.9 Expert systems as decision support systems 9
Exercises 10
References and further reading 10

2 Basic concepts of expert systems **12**
2.1 Introduction 12
2.2 AI 14
2.3 State space search 16
2.4 Using rules to represent knowledge 18
2.5 Inference 19
2.6 Tools for building expert systems 22
2.7 The user interface 23
2.8 Architecture of expert systems 24
2.9 Summary comparison of expert systems with conventional programs 24
Exercises 26
References and further reading 26

3 Knowledge representation **27**
3.1 Introduction 27
3.2 Production rules 28
3.3 Semantic networks 31
3.4 Frames 32
3.5 Logic 35
3.6 Hybrid representations 39
3.7 Summary 39
Exercises 40
References and further reading 42

4 Knowledge engineering **43**
4.1 Introduction 43
4.2 Skills required for KE 43
4.3 Knowledge acquisition and knowledge elicitation 44
4.4 Knowledge elicitation 45
4.5 Interviewing 45
4.6 Direct interview techniques 46
4.7 Summary of interviewing techniques 47
4.8 Other knowledge elicitation techniques 47
4.9 Difficulties with knowledge acquisition 50
Exercises 50
References and further reading 52

5 Inference **53**
5.1 Introduction 53
5.2 The operation of the inference engine 53
5.3 Inference strategies 56
5.4 Case-based reasoning 58
5.5 CBR vs. traditional expert systems 62
5.6 Heuristic or shallow knowledge 62
Exercises 64
References and further reading 64

6 Software for building expert systems **66**
6.1 Introduction 66
6.2 Tools for developing expert systems 66
6.3 Programming languages 67
6.4 Expert system shells 69
6.5 AI toolkits 70
6.6 System-building aids 72
6.7 Choosing development tools 74
6.8 Conclusions 76
Exercises 77
References and further reading 77

7 Uncertainty **78**
7.1 Introduction 78
7.2 Bayesian inference 79
7.3 Building expert systems using Bayesian inference 84
7.4 Certainty factors 90
7.5 Non-numerical methods for handling uncertainty 91
7.6 Summary 92
Exercises 92
References and further reading 93

8 Human–computer interaction issues for expert systems **94**
8.1 Introduction 94
8.2 Requirements for expert system interfaces 95
8.3 Knowledge engineer's interface and user interface 95
8.4 Input and output devices for expert systems 95
8.5 Human interaction styles appropriate for expert systems 96
8.6 Explanation facilities 100
8.7 Uses of hypermedia 106
8.8 Graphical interfaces 106
8.9 Conclusions 108
Exercises 108
References and further reading 108

9 Introduction to design of expert systems using rule-based shells 110
9.1 Introduction 110
9.2 Stages involved in the design of expert systems 110
9.3 Structure of a VP-Expert program 117
Exercises 121
References and further reading 125

10 Techniques using VP-Expert 126
10.1 Representing and manipulating CFs in VP-Expert 126
10.2 The truth threshold 129
10.3 Unknowns in VP-Expert 130
10.4 Developing the user interface with VP-Expert 130
Exercises 133
References and further reading 136

11 The expert system development life-cycle 137
11.1 Introduction 137
11.2 The stage-based approach 138
11.3 The prototyping approach 138
11.4 The feasibility study 141
11.5 The knowledge engineering stage 143
11.6 Maintenance of expert systems 143
Exercises 144
References and further reading 145

12 Applications, the market and the future 146
12.1 Introduction 146
12.2 Applications of expert systems 146
12.3 Emerging applications of expert systems 146
12.4 Reasons for some scepticism towards expert systems 151
12.5 The future of expert systems 152
12.6 Conclusions 153
Exercises 154
References and further reading 154
