Wastewater Treatment

Biological and Chemical Processes
Third edition

Springer

Table of Contents

1.	Wastewater, Volumes and Composition	11
1.1.	The volumes of wastewater	11
1.1.1.	Measurements.	11
1.1.2.	Statistics	13
1.1.3.	Estimates	16
1.1.4.	Population Equivalent and Person Load	24
1.1.5.	Prognoses	25
1.2.	Wastewater components	27
1.2.1.	Domestic wastewater/municipal wastewater	27
1.2.2.	Variations	35
2.	Characterization of Wastewater and Biomass	43
2.1.	Suspended solids.	43
2.1.1.	Settleable solids	45
2.2.	Organic matter.	45
2.3.	Nitrogen	57
2.4.	Phosphorus	58
2.5.	Alkalinity (TAL).	59
2.6.	Sludge volume index etc.	59
2.7.	Respiration rate of sludge	60
3.	Basic Biological Processes	65
3.1.	The biology in biological treatment plants	65
3.1.1.	The organisms.	65
3.1.2.	Selection	68
3.2.	Conversions in biological treatment plants	72
3.2.1.	Biological growth	73
3.2.2.	Hydrolysis	74
3.2.3.	Decay	75
3.2.4.	Storage	76
3.3.	Aerobic heterotrophic conversion of organic matter	77
3.3.1.	Reactions, aerobic conversions.	77
	Yield constant, aerobic heterotrophic conversions	79
3.3.3.	Nutrients, aerobic heterotrophic conversions.	83
3.3.4.	Kinetics, aerobic heterotrophic conversions	84
3.3.5.	Heterotrophic micro-organisms, aerobic conversions	85
3.3.6.	The influence of the environmental factors, aerobic heterotrophic conversions	85
3.4.	Nitrification	89
3.4.1.	Reactions by nitrification.	90
3.4.2.	Alkalinity	92

3.4.3. Kinetics, nitrification	93
3.4.4. The influence of the environmental factors on nitrification . .	93
3.5. Denitrification	100
3.5.1. Reactions by denitrification.	101
3.5.2. Yield constant by denitrification	101
3.5.3. Nutrients, denitrification	103
3.5.4. Alkalinity.	103
3.5.5. Kinetics, denitrification	103
3.5.6. The influence of the environmental factors, denitrification. .	105
3.6. Biological phosphorus removal	109
3.6.1. Microorganisms	109
3.6.2 Reactions, biological phosphorus removal	111
3.6.3. Yield constant, biological phosphorus removal	113
3.6.4. Alkalinity.	113
3.6.5 Kinetics, biological phosphorus removal	114
3.6.6. Environmental factors, biological phosphorus removal . . .	114
3.7. Anaerobic processes	116
3.7.1. Reactions, anaerobic processes	118
3.7.2. Growth and soluble COD yield constants, anaerobic processes	118
3.7.3. Nutrients, anaerobic processes	119
3.7.4. Alkalinity, anaerobic processes	120
3.7.5. Kinetics, anaerobic processes	121
3.7.6. Gas production	122
3.7.7. The influence of the environmental factors, anaerobic processes	123
4. Activated Sludge Treatment Plants.	131
4.1. Mass balances, activated sludge plants	131
4.2. Concepts and definitions of the activated sludge process	137
4.3. Types of plants, activated sludge plants	143
4.3.1. Activated sludge with recycle	143
4.3.2. Single tank activated sludge plants	146
4.3.3. Contact stabilization plants	148
4.3.4. Biosorption plants	150
4.3.5. Design of activated sludge processes	151
4.3.6. Design by means of volumetric loading	151
4.3.7. Design by means of sludge loading or sludge age.	153
5. Biofilters	157
5.1. Biofilm kinetics.	157
5.2. Biofilm kinetic parameters.	167
5.3. Hydraulic film diffusion	169
5.4. Two-component diffusion	172
5.5. Filter kinetics	175
5.6. Mass balances for biofilters	179

5.6.1. Biofilters without recycle	180
Biofilters with recycle	180
5.7. Concepts and definitions	181
5.8. Types of plants	182
5.8.1. Trickling filters.	183
5.8.2. Submerged filters	185
5.8.3. Rotating discs	188
5.9. Design of biofilters	188
5.9.1. Design of trickling filters	189
5.9.2. Design of discs	190
5.9.3. Rules for other types of filter	191
5.9.4. Design of biofilters for dissolved organic matter.	191
5.10. Technical conditions concerning biofilters.	195
5.10.1 Aeration in biofilters	195
5.10.2 Growth and sloughing off of the biofilm.	195
5.11. Removal of particulate organic matter	197
5.12. Detailed model	203
 6. Treatment Plants for Nitrification	209
6.1. Mass balances, nitrifying plants	210
6.1.1. Separate nitrifying plants	210
6.1.2. Combined removal of organic matter and ammonium	219
6.2. Types of plants for nitrification	220
6.2.1. Nitrification plants with separate sludge	222
6.2.2. Single sludge nitrification plants	222
6.2.3. Nitrification in two sludge treatment systems	225
6.2.4. Nitrification plants with separate sludge in filters	226
6.2.5. Two sludge nitrification plants in filters	227
6.2.6. Combined biofilters and activated sludge treatment plants for nitrification	229
6.3. Design of nitrifying plants	229
6.3.1. Design of activated sludge treatment plants for nitrification .	230
6.3.2. Optimizing operation of nitrifying plants	233
Design of biofilters for nitrification.	234
 7. Treatment Plants for Denitrification	239
7.1. Mass balances, denitrifying treatment plants.	240
7.1.1. Separate denitrifying plant	242
7.1.2. Combined nitrification and denitrification	247
7.2. Types of plants for denitrification.	251
7.2.1. Denitrification plants with separate sludge	253
7.2.2. Denitrification plants with combined sludge	254
7.2.3. Biofilters for denitrification.	258
7.3. Design of denitrifying plants.	259
7.3.1. C/N ratio	259
7.3.2. Oxygen/stirring	264

TABLE OF CONTENTS

7.3.3. Simultaneous nitrification-denitrification	265
7.3.4. Nitrogen gas in settling tanks and biofilters	266
7.3.5. Oxygen consumption	269
7.3.6. Alkalinity.	270
7.3.7. Design of activated sludge plants with denitrification	270
7.3.8. Model based process design.	273
7.3.9. Design of biofilters for denitrification	277
7.4. Redox-zones in the biomass	279
8. Plants for Biological Phosphorus Removal	285
8.1. Mass balances, biological phosphorus removal plants with activated sludge	285
8.2. Plant types, biological phosphorus removal	288
8.2.1. Biological phosphorus removal with nitrification- denitrification and an internal carbon source	288
8.2.2. Biological phosphorus removal with nitrification- denitrification and an external carbon source	290
8.2.3. Biological phosphorus removal with internally produced easily degradable organic matter	291
8.2.4. Biological phosphorus removal without nitrification-denitrification	291
8.3. Design of biological phosphorus removal	291
8.3.1. Easily degradable organic matter	291
8.3.2. Design of tanks for biological phosphorus removal	293
Optimization of plant operation, biological phosphorus removal	296
9. Hydrolysis/fermentation and Anaerobic Wastewater Treatment	299
9.1. Hydrolysis/fermentation	299
9.2. Anaerobic wastewater treatment	300
9.2.1. Introduction	300
9.2.2. Mass balances, anaerobic plants	301
9.3. Plant types, anaerobic processes.	305
9.3.1. Pretreatment of wastewater, anaerobic plants	305
9.3.2. Plants with suspended sludge	306
9.3.3. Anaerobic filter processes	309
9.4. Design of anaerobic plants.	310
9.4.1. Design of plants with suspended sludge	311
9.4.2. Design of anaerobic filter plants	315
9.4.3. Gas production, anaerobic processes.	317
9.4.4. Optimization, anaerobic plants.	319
9.4.5. Start-up, anaerobic plants.	319
9.4.6. Disturbances, anaerobic plants	320
10. Treatment Plants for Phosphorus Removal from Wastewater	327
10.1. Mass balances for phosphorus removal processes	327

10.2. Mechanisms for chemical/physical phosphorus removal	330
10.2.1. Precipitation	331
10.2.2. Coagulation	335
10.2.3. Flocculation	341
10.2.4. Phosphorus binding in soil	346
10.3. Treatment plants for phosphorus removal	348
10.3.1. Precipitants	348
10.3.2. Treatment processes	350
10.4. Design of plants for phosphorus removal	355
10.4.1. Chemical precipitation	355
10.4.2. Phosphorus binding in soil	361
10.5. Operation of plants for phosphorus removal	363
 11. Model features, calibration and application	369
11.1. Pragmatism versus theory-based models	369
11.1.1. Engineering craftsmanship	369
11.1.2. Science-based determinism	370
11.1.3. Model structure, variables, parameters and forcing input	370
11.2. Model applications	371
11.2.1. Planning tool	371
11.2.2. Analysis of existing plants	372
11.2.3. Design of new plants	372
11.2.4. Real time control of plant	372
11.2.5. Models as research tools	373
11.2.6. Level of aggregation	373
11.3. Model calibration and parameter estimation	374
11.3.1. Model structure	374
11.3.2. Parameter calibration, verification and estimation	375
11.4. Treatment plant design	379
11.4.1. Identification of problem	379
11.5. Model for biofilm system	382
11.6. Analysis of existing plant/pilot plant	392
11.6.1. Identification of the problem	392
11.6.2. Design of experimental programme	393
11.6.3. Interpretation of results	393
11.7. Real time control	395
11.8. Integrated modelling	397
 List of Symbols	401
 Index	421

ENVIRONMENTAL ENGINEERING

This book gives a detailed presentation of the theories behind modern wastewater treatment processes. It presents an up-to-date description of wastewater characteristics and the theories of biological processes and their modelling. The quantitative information density is unique due to the numerous tables, figures and examples.

The book is primarily intended for graduate and PhD students, but owing to the abundant quantitative information, it is also valuable for consulting engineers and other professionals who deal with wastewater treatment. The book has an extensive Table of Contents and list of symbols, which makes it useful as a handbook.
