# Fundamental Concepts of ENVIRONMENTAL CHEMISTRY

Second Edition

G S Sodhi

*Fundamental Concepts of Environmental Chemistry* discusses the influence of environmental factors on both living and nonliving with special emphasis on human health problems like mutagenesis, teratogenesis and carcinogenesis. Energy conservation, acid rain, catalytic converters, greenhouse gases, stratospheric ozone depletion, polymers and plastics, eutrophication, noise pollution, sustainable development, biodiversity and national conservation strategies are also discussed in the book.

#### New to the Second Edition:

- Chapters on:
  - Indoor Pollution
  - Polychlorinated Biphenyls
  - Solid Waste
  - Hazardous Waste
  - International Efforts
- Updated References
- Relevant websites
