THE PRESSUREMETER
AND
FOUNDATION ENGINEERING

by

F. Baguelin

Head, Soil Mechanics and Foundation
Engineering Department,
Central Paris Laboratory
French Highways Administration

J. F. Jézéquel

Head, Soil Mechanics Section,
Saint Briec Laboratory,
French Highways Administration

D. H. Shields

Professor of Civil Engineering
University of Ottawa, Canada

First Edition

1978

PREFACE	21
FOREWORD	23
 CHAPTER 1 – AN INTRODUCTION TO THE PRESSURE- METER	27
Historical Development	30
<i>References to Chapter 1</i>	43
 CHAPTER 2 – RUNNING THE STANDARD PRESSURE- METER TEST	45
A. GENERAL PRINCIPLES OF THE MENARD TEST	45
The Pressuremeter	45
a) The probe	45
b) The control unit	46
c) The tubing	46
The Pressuremeter Test	46
Typical Test Result	48
 B. DESCRIPTION AND COMPARISON OF MENARD PRESSUREMETERS	51
Current Pressuremeters	52
a) Pressuremeter E	52
b) Pressuremeter GC	57
c) Pressuremeter GB	64
Choosing a Pressuremeter	69
 C. GETTING THE PRESSUREMETER INTO THE GROUND	74
Preboring – General Principles	74
Drilling Equipment	78
a) Rotary drilling	79
b) Percussion drilling	85

Direct Insertion - The Slotted Tube	97
a) Protecting the probe in a pre-bored hole	97
b) Inserting a probe into caving ground	98
Special Considerations Concerning the Slotted Tube	102
How the Way the Probe is Inserted in the Ground Affects the Results	104
a) The shape of the pressuremeter curve	106
b) Dispersion of the results	108
c) The validity of the characteristics which are measured	111
d) Conclusions regarding the way the probe should be installed in the ground	119
D. PRACTICAL REALIZATION OF THE TEST	121
Filling and Saturating the Circuits	123
Calibration	124
a) Volume losses	124
b) Pressure losses	131
Positioning the Probe in the Borehole	133
Starting the Test	136
Carrying out the Test	141
Deflating and Moving the Probe	146
Cycled Tests	146
E. INTERPRETATION OF THE TEST RESULTS	147
The Limit Pressure, p_1	151
The Creep Pressure, p_f	151
The Volume, v_f	152
The At Rest Horizontal Total Pressure, p_o (and P_{oM})	152
The Net Limit Pressure, p_1^*	153
The Pressuremeter Modulus, E_M	153
Cycled Moduli	155
Summary	155
F. ORGANIZING AND EVALUATING A FOUNDATION INVESTIGATION USING THE PRESSUREMETER ...	155
Equipment	156
Number and Location of the Tests	157
Presentation of the Results	158
Evaluation of the Results	158
References to Chapter 2	161

CHAPTER 3 – THE RECOMMENDED WAY TO DESIGN FOUNDATIONS	163
A. GENERAL PRINCIPLES	163
B. EVALUATING THE SOIL CONDITIONS	165
Determining the Soil Conditions from the Borehole	166
a) Material which is extracted from the hole	166
b) Penetration resistance	171
Determining the Soil Conditions from the Pressuremeter Results	173
The Groundwater Conditions	175
Comparison with Other In Situ Tests	176
a) Introduction	176
b) Comparisons between MPT and CPT	178
c) Comparisons between MPT and SPT	189
Urban and Regional Geotechnical Maps Based on the Pressuremeter	190
a) Computers	190
b) Geotechnical maps	191
C. APPRAISING THE FOUNDATION CONDITIONS	197
D. FOUNDATION DESIGN	204
Ultimate Bearing Capacity	205
a) Homogeneous soil	207
b) Two soil layers	221
c) General case	223
Estimating Settlement	228
a) Settlement in homogeneous soil	229
b) Settlement in heterogeneous soil	232
c) The case of a soft layer	233
d) Examples of settlement calculations	236
e) Discussion	243
The Experimental Basis for the Pressuremeter Method	262
a) Bearing capacity	262
b) Settlement	284
E. OTHER DESIGN PROBLEMS	292
Special Footing Problems	292
a) Eccentric loads	292

b) Inclined loads	293
c) Hillsides or slopes	295
d) Combined effects of eccentricity and inclination of the load and nearby sloping ground	296
e) Examples	297
Horizontal Pile Capacity	301
a) A theoretical look at the problem	302
b) Experimental evidence	312
c) Conclusions	322
Soil Anchors	324
Retaining Structures	328
<i>References to Chapter 3</i>	329
CHAPTER 4 – A LOOK AT PRESSUREMETER THEORIES ..	335
A. INTRODUCTION	335
B. BASIC CONCEPTS	336
Deformation and Displacement	336
Stresses at Equilibrium	341
Rheological Equations	342
Simplifying the Problem – A Cavity of Zero Initial Radius	344
C. THE ELASTIC PLASTIC MODEL	346
Rheological Properties for the Linear Elastic Soil – Describing the Problem	346
Solving the Linear Elastic Problem	347
Stress and Strain in an Elastic Soil	348
How Realistic is Elastic Soil?	351
Rheological Properties of the Elastic-Plastic Soil – The Start of the Plastic Condition	351
Stress Field – The Limit Pressure	352
The Theoretical Pressuremeter Curve for the Incompressible Soil – Stress Path	356
The Limitations of Elastic-Plastic Behaviour	360
D. THE SPECIAL CASE OF COHESIVE SOIL IN UN- DRAINED BEHAVIOUR	361

The Relationship Between the Shear Curve and the Pressuremeter Curve	362
The Influence of Soil Sensitivity on Pressuremeter Behaviour ...	364
Influence of a Remoulded Annulus	368
E. GENERAL RELATIONSHIPS FOR THE CYLINDRICAL EXPANSION OF A CAVITY IN ANY SOIL	375
The Differential Equations which Determine the Strain Distribution	376
Equations Relating Stress and Strain	377
F. THE INFLUENCE OF SENSITIVITY AND COMPRESSIBILITY FOR GRANULAR SOIL	380
The Influence of Sensitivity for Granular Soil	380
The Influence of Compressibility for Granular Soil	382
G. THE INFLUENCE OF DILATANCY FOR GRANULAR SOILS	387
Linear Dilatant Material	387
The Influence of Dilatancy on the Limit Pressure	393
H. DETERMINING STRENGTH PARAMETERS FROM PRESSUREMETER RESULTS	397
I. CONCLUSIONS	402
<i>References to Chapter 4</i>	404
CHAPTER 5 – OBTAINING THE MOST FROM THE PRESSUREMETER	407
A. TECHNOLOGICAL PROBLEMS	407
Choosing the Covering for the Probe	407
The Tubing which Carries Water	413
Pressure Gauges	415
a) Choosing the pressure gauges	415
b) Precautions to take and checks to make	416
c) Calibration	417

B. PROBLEMS ASSOCIATED WITH THE USE OF THE PRESSUREMETER	419
Tests in Deep, Dry Holes	419
Living with the Capacity of the Pressuremeter	421
a) Pressure limitations	421
b) Volume limitations	421
Methods of Extrapolating Pressuremeter Curves to p_1	425
a) Description of the methods	425
b) Choosing the method of extrapolation	429
C. EXPLOITING PRESSUREMETER RESULTS WITH THE COMPUTER	431
Tracing the Test Curve	431
Determining the Pressuremeter Modulus	433
Determining the Limit Pressure	435
General Conclusions Regarding the Use of Computers	439
D. CARRYING OUT PRESSUREMETER TESTS OFF-SHORE	439
Floating Platforms	442
a) Direct insertion of the probe	442
b) Testing in a predrilled borehole	446
Summary	450
E. MISCELLANEOUS CONSIDERATIONS	450
Precision	450
Stress Field	452
Drainage Conditions	452
Deviations from Theory	453
Poisson's Ratio	453
<i>References to Chapter 5</i>	454
CHAPTER 6 - OTHER METHODS AND EQUIPMENT	455
A. THE LENGTH TO DIAMETER RATIO OF THE PROBE AND THE ROLE OF THE GUARD CELLS	456
Theoretical Aspects	456
Experimental Aspects	460
Discussion on the Theory and Experiments	464
Single Cell Probes	467

a) Direct measuring devices	467
b) Volume measuring devices	471
B. OTHER TEST PROCEDURES	473
Constant Rate of Strain Tests	473
a) Equipment	473
b) Procedure	478
c) Conclusions	481
Load Increments that Last Longer	482
C. SELF-BORING PRESSUREMETERS	482
The Principles of Self-Boring	483
How Self-Boring Works	491
a) Forcing the probe into the ground	491
b) Rotation and the way the soil is ground up	492
c) Removing the cuttings	496
d) Protecting the electrical leads and tubing	496
e) Supporting the sides of the hole	498
f) Summary	498
The Self-Boring Pressuremeter in Practice	502
a) Technical details	502
b) Carrying out a self-boring pressuremeter test	508
c) Proposed standards for a self-boring pressuremeter test	516
d) Typical test results and comparisons	517
e) Other tests and measurements with the self-boring pressuremeter	531
f) Analysing self-boring pressuremeter test results	548
Conclusions Regarding the Practical Application of the Self-Boring Pressuremeter	565
a) The place of the self-boring pressuremeter in soil mechanics ..	566
b) Judging the quality of a self-boring pressuremeter test	569
c) Using self-boring pressuremeter test results	570
D. OTHER WAYS TO USE THE RESULTS OF PRESSUREMETER TESTS	573
Soil Properties	573
a) Coefficient of earth pressure at rest, K_0	573
b) Shear strength parameters, c and ϕ	574

c) Deformation modulus, E	587
d) Consolidation parameters, m_v and c_v	595
e) Preconsolidation pressure, p_c	595
Settlement Analysis	595
a) Elasticity	597
b) Semi-empirical predictions	599
c) Finite element techniques	602
Bearing Capacity	605
<i>References to Chapter 6</i>	607
AFTERWORD	613
