

OPTICAL SIGNAL PROCESSING

Anthony VanderLugt

Wiley Series in Pure and Applied Optics
Joseph W. Goodman, Editor

Contents

Chapter 1. Basic Signal Parameters	1
1.1 Introduction	1
1.2 Characterization of a General Signal	2
1.2.1. By Bandwidth	3
1.2.2. By Time	3
1.2.3. By Sample Interval	4
1.2.4. By Number of Samples	4
1.2.5. By Number of Amplitude Levels or Signal Features	4
1.2.6. By Degrees of Freedom	5
1.3 The Sample Function	5
1.4 Examples of Signals	8
1.5 Spatial Signals	8
Chapter 2. Geometrical Optics	12
2.1 Introduction	12
2.2 Refractive Index and Optical Path	12
2.3 Basic Laws of Geometrical Optics	15
2.3.1. Law of Reflection	15
2.3.2. Law of Refraction	16
2.3.3. Fermat's Principle	17
2.3.4. The Critical Angle	19
2.4 Refraction by Prisms	20
2.4.1. Minimum Deviation Angle	20
2.4.2. Dispersion by a Prism	22
2.4.3. Beam Magnification by a Prism	22
2.4.4. Counter-Rotating Prisms	25
2.4.5. The Wobble Plate	25
2.5 The Lens Formulas	26
2.5.1. The Sign Convention	26
2.5.2. Refraction at a Curved Surface	28

2.5.3.	The Refraction Equation for Combined Surfaces	30
2.5.4.	The Condenser Lens Configuration	31
2.5.5.	The Collimating Lens Configuration	33
2.5.6.	Principal Planes	33
2.5.7.	Thin-Lens Systems	35
2.5.8.	Afocal or Telescopic Configurations	37
2.6	The General Imaging Condition	39
2.6.1.	Ray Tracing	40
2.6.2.	Lateral Magnification	43
2.6.3.	The Principal Pupil Ray	44
2.7	The Optical Invariant	45
2.7.1.	Magnification Revisited	48
2.7.2.	Spatial Resolution	48
2.7.3.	Space Bandwidth Product	50
2.7.4.	Matching the Information Capacity of System Components	51
2.8	Classification of Lenses and Systems	54
2.8.1.	The Coddington Shape Factor	54
2.8.2.	The Coddington Position Factor	56
2.9	Aberrations	57
2.9.1.	Spherical Aberration	59
2.9.2.	Coma	62
2.9.3.	Astigmatism	63
2.9.4.	Curvature of Field	64
2.9.5.	Distortion	65
2.9.6.	Splitting the Lens	65

Chapter 3. Physical Optics **71**

3.1	Introduction	71
3.2	The Fresnel Transform	75
3.2.1.	Convolution and Impulse Response	78
3.2.2.	Diffraction by Two Sources	80
3.2.3.	Fresnel Zones, Chirp Functions, and Holography	82
3.2.4.	The Fresnel Transform of a Slit	88
3.3	The Fourier Transform	95
3.3.1.	The Fourier Transform of a Periodic Function	95
3.3.2.	The Fourier Transform for Nonperiodic Signals	96
3.3.3.	The Fourier Transform in Optics	97
3.4	Examples of Fourier Transforms	100
3.4.1.	Fourier Transforms of Aperture Functions	100
3.4.2.	A Partitioned Aperture Function	101
3.4.3.	A Periodic Signal	103

3.5	The Inverse Fourier Transform	103
3.5.1.	Bandlimited Signals	105
3.5.2.	Rayleigh-Resolution Criterion	105
3.5.3.	Abbe's Resolution Criterion	106
3.5.4.	The Sample Function, Sampling Theorem, and Decomposition	112
3.6	Extended Fourier-Transform Analysis	115
3.6.1.	The Basic Elements of an Optical System	115
3.6.2.	Operational Notation	117
3.6.3.	A Basic Optical System	118
3.6.4.	Cascaded Optical Systems	125
3.6.5.	The Scale of the Fourier Transform	126
3.7	Maximum Information Capacity and Optimum Packing Density	128
3.7.1.	Maximum Information Capacity	128
3.7.2.	Optimum Packing Density	130
3.7.3.	Convergent Illumination	132
3.7.4.	The Chirp-Z Transform	133
3.8	System Coherence	134
3.8.1.	Spatial Coherence	134
3.8.2.	Temporal Coherence	137
3.8.3.	Spatial and Temporal Coherence	140

Chapter 4. Spectrum Analysis **145**

4.1	Introduction	145
4.2	Light Sources	146
4.3	Spatial Light Modulators	147
4.3.1.	Light Valve Spatial Light Modulators	148
4.3.2.	Optically Addressed Electro-Optic Spatial Light Modulators	149
4.3.3.	Liquid-Crystal Spatial Light Modulators	150
4.3.4.	Magneto-Optic Spatial Light Modulators	151
4.4	The Detection Process in the Fourier Domain	152
4.4.1.	A Special Photodetector Array	152
4.4.2.	Spectral Responsivity and Typical Power Levels	155
4.4.3.	The Number of Photodetector Elements	156
4.4.4.	Array Geometry	156
4.4.5.	Readout Rate	158
4.4.6.	Blooming and Electrical Crosstalk	158
4.4.7.	Linearity and Uniformity of Response	159
4.5	System Performance Parameters	159
4.5.1.	Total Spatial Frequency Bandwidth	160
4.5.2.	Sidelobe Control and Crosstalk	160

5.14	Multiplexed Filters	238
5.15	Computer Generated Filters	240
5.16	Reference Function Optical Processors	240
Chapter 6. Spatial Filtering Systems		247
6.1	Introduction	247
6.2	Optical Signal Processor and Filter Generator	247
6.2.1.	The Light Source	249
6.2.2.	The Spatial Light Modulator	251
6.2.3.	The Fourier Transform Lens	252
6.2.4.	The Filter Plane	253
6.2.5.	The Imaging Lens	254
6.3	The Readout Module	255
6.3.1.	The Thresholding Operation	255
6.3.2.	The Importance of Nonoverlapping Signals	256
6.3.3.	On-Chip Processing	258
6.3.4.	Constant False-Alarm Rate	259
6.4	The Reference-to-Signal-Beam Ratio	261
6.5	Orientation and Scale-Searching Operations	263
6.5.1.	The Orientation Search	263
6.5.2.	The Scale Search	266
6.6	Methods for Handling Nonuniform Noise Spectral Densities	267
6.6.1.	Dual Frequency-Plane Processing	268
6.6.2.	Transposed Processing for Adaptive Filtering	270
6.7	Other Applications for Optical Spatial Filtering	273
6.7.1.	Target Recognition	273
6.7.2.	Motion Analysis	273
6.7.3.	Frame Alignment and Stereo Compilation	277
6.8	The Effects of Small Displacements of Spatial Filters	279
6.8.1.	Lateral Displacement	279
6.8.2.	Longitudinal Displacements	283
6.8.3.	Random Motion of the Filter	284
Chapter 7. Acousto-Optic Devices		288
7.1	Introduction	288
7.2	Acousto-Optic Cell Spatial Light Modulators	288
7.2.1.	Raman-Nath Mode	290
7.2.2.	The Bragg Mode	292
7.2.3.	Diffraction Angles, Spatial Frequencies, and Temporal Frequencies	294
7.2.4.	The Time Bandwidth Product	296

4.5.3.	Frequency Resolution/Photodetector Spacing	163
4.5.4.	Array Spacing and Number of Photodetector Elements	168
4.6	Dynamic Range	171
4.6.1.	Intermodulation Products	172
4.6.2.	Signal-to-Noise Ratio and the Minimum Signal Level	173
4.6.3.	Integration Time/Bandwidth	179
4.6.4.	Example	179
4.6.5.	Quantum Noise Limit	180
4.7	Raster-Format Spectrum Analyzer	183
4.7.1.	The Recording Format	183
4.7.2.	The Two-Dimensional Spectrum Analyzer	188
4.7.3.	Illustration of Raster-Format Spectra	193
4.8	Summary of the Main Design Concepts	194

Chapter 5. Spatial Filtering **200**

5.1	Introduction	200
5.2	Some Fundamentals of Signal Processing	200
5.2.1.	Linear, Space-Invariant Systems	201
5.2.2.	Parseval's Theorem	203
5.2.3.	Correlation	203
5.2.4.	Input/Output Spectral Densities	205
5.2.5.	Matched Filtering	207
5.2.6.	Inverse Filtering	209
5.3	Spatial Filters	210
5.4	Binary Spatial Filters	212
5.4.1.	Binary Filters for Signal Detection or Excision	213
5.4.2.	Other Applications of Binary Filters	214
5.5	Magnitude Spatial Filters	214
5.6	Phase Spatial Filters	216
5.7	Real-Valued Spatial Filters	218
5.8	Experimental Examples	219
5.9	The Spatial Carrier Frequency Filter	223
5.10	Interferometric Methods for Constructing Filters	224
5.10.1.	Limitations of the Mach-Zehnder Interferometer	229
5.10.2.	The Rayleigh Interferometer	229
5.10.3.	The Minimum-Aperture Interferometer	230
5.11	Information Processing	231
5.12	Arbitrary Reference Function	236
5.13	Bandwidth Considerations	237

7.3	Dynamic Transfer Relationships	297
7.3.1.	Diffraction Efficiency	297
7.3.2.	Input/Output Relationships	299
7.4	Time Delays and Notation	301
7.5	Phase-Modulation Notation	301
7.6	Sign Notation	303
7.7	Conjugate Relationships	305
7.8	Visualization of the Acousto-Optic Interaction	305
7.9	Applications of Acousto-Optic Devices	307
7.9.1.	Acousto-Optic Modulation	307
7.9.2.	Acousto-Optic Beam Deflectors	309
Chapter 8.	Acousto-Optic Power Spectrum Analyzers	335
8.1	Introduction	335
8.2	A Basic Spectrum Analyzer	336
8.2.1.	The Illumination Subsystem	338
8.2.2.	A Raman-Nath-Mode Spectrum Analyzer	340
8.2.3.	A Bragg-Mode Spectrum Analyzer	344
8.2.4.	The Generalization to Arbitrary Signals	346
8.3	Aperture Weighting for Sidelobe Control	347
8.4	Resolution	348
8.5	Dynamic Range and Signal-to-Noise Ratio	350
8.6	Spur-Free Dynamic Range	355
8.6.1.	Intermodulation Products Due to Acousto-Optic Cells	355
8.6.2.	Signal Compression	358
8.6.3.	Scattered Light	359
8.7	Photodetector Geometric Considerations	360
8.8	Example	361
8.9	The Signal-to-Noise Ratio	362
8.10	Radiometers	363
8.11	Summary of the Main Design Concepts	365
Chapter 9.	Heterodyne Systems	369
9.1	Introduction	369
9.2	The Interference Between Two Waves	370
9.2.1.	Spatial Interference	370
9.2.2.	Temporal and Spatial Interference	372
9.3	Overlapping Waves and Photodetector Size	374
9.3.1.	Optimum Photodetector Size for Plane-Wave Interference	375

9.3.2.	Optimum Photodetector Size for a Two-Dimensional Chirp	378
9.3.3.	Optimum Photodetector Size for a One-Dimensional Chirp	380
9.3.4.	Optimum Photodetector Size for a General Signal	381
9.4	The Optical Radio	384
9.4.1.	Direct Detection	385
9.4.2.	Heterodyne Detection	386
9.5	A Generalized Heterodyne System	393
Chapter 10.	Heterodyne Spectrum Analysis	397
10.1	Introduction	397
10.2	Basic Theory	398
10.3	Spatial and Temporal Frequencies: The Mixed Transform	400
10.3.1.	The cw Signal	401
10.3.2.	A Short Pulse	403
10.3.3.	The Evolving Pulse	404
10.4	The Distributed Local Oscillator	408
10.4.1.	The Ideal Reference Signal	408
10.4.2.	The Mixed Transform of the Reference Signal	412
10.5	Photodetector Geometry and Bandwidth	414
10.5.1.	The Bandpass Filter Shape	416
10.5.2.	Crosstalk	418
10.5.3.	Resolution, Accuracy, and Photodetector Size	420
10.6	Temporal Frequencies of the Reference Bias Term	420
10.7	Dynamic Range	422
10.8	Comparison of the Heterodyne and Power Spectrum Analyzer Performance	427
10.8.1.	Both Systems Thermal-Noise Limited	428
10.8.2.	Both Systems Shot-Noise Limited	428
10.8.3.	Power Spectrum Analyzer Thermal-Noise Limited; Heterodyne Spectrum Analyzer Shot-Noise Limited	429
10.8.4.	Power Spectrum Analyzer Using a CCD Array	429
10.9	Hybrid Heterodyne Spectrum Analyzer	430
Chapter 11.	Decimated Arrays and Cross-Spectrum Analysis	433
11.1	Introduction	433
11.2	Background for the Heterodyne Spectrum Analyzer	433

11.3	Photodetector Geometry and Detection Scheme	435
11.4	The Reference and Scanning Functions	438
11.5	Signal-to-Noise Ratio and Dynamic Range	440
11.6	Improved Reference Waveform	442
11.7	The Cross-Spectrum Analyzer	445
	11.7.1. Cross-Spectrum Analysis with Spatial Heterodyning	446
	11.7.2. Cross-Spectrum Analysis with Temporal Heterodyning	448
Chapter 12. The Heterodyne Transform and Signal Excision		454
12.1	Introduction	454
12.2	The Heterodyne Transform	454
12.3	The Temporal Frequency Range of the Baseband Terms	458
12.4	Probing Arbitrary Three-Dimensional Fields	461
12.5	Signal Excision	465
12.6	Arbitrary Filter Function	472
Chapter 13. Space-Integrating Correlators		477
13.1	Introduction	477
13.2	Reference-Function Correlators	478
	13.2.1. Real-Valued Impulse Responses	481
	13.2.2. Complex-Valued Impulse Responses	482
	13.2.3. A Wavefront View of Matched Filtering	483
	13.2.4. The Photodetector Bandwidth	486
	13.2.5. Correlation in the Presence of Doppler Frequency Shifts	486
	13.2.6. Programmable Matched Filter	488
13.3	Multichannel Operation	488
13.4	Heterodyne/Homodyne Detection	490
13.5	Homodyne Detection in the Fourier Domain	493
13.6	Heterodyne Detection	496
13.7	Carrier Frequency Requirements	497
13.8	Illumination Requirements	498
13.9	Integrate and Dump	499
13.10	Some More Configurations	500
Chapter 14. Time-Integrating Systems		504
14.1	Introduction	504
14.2	Spectrum Analysis	505
	14.2.1. Requirements on the Reference Signals	506

14.2.2. The Basic Operation of the Spectrum Analyzer	510
14.2.3. The Key Features of the Time-Integrating Spectrum Analyzer	513
14.3 Time-Integrating Correlation	515
14.3.1. Time-Integrating Correlator Due to Montgomery	517
14.3.2. Time-Integrating Correlator Due to Sprague and Koliopoulos	520
14.4 Electronic Reference Correlator	526
14.5 Comparison of Features	529
14.6 Integrated Optical Systems	530
Chapter 15. Two-Dimensional Processing	536
15.1 Introduction	536
15.2 Triple-Product Processing	537
15.3 Crossed Acousto-Optic Cell Geometry	540
15.4 The Bispectrum	543
15.5 Spectrum Analysis	545
15.5.1. Real-Time Raster-Format Spectrum Analysis	545
15.5.2. Frequency Resolution	547
15.5.3. Experimental Results	548
15.6 Ambiguity Function Generation	549
15.6.1. Ambiguity Function for a cw Signal	552
15.6.2. Ambiguity Function for a Short-Pulse Signal	553
15.6.3. Ambiguity Function for an Infinite Time Duration Chirp Signal	555
15.7 Wigner-Ville Distributions	556
15.8 Range and Doppler Signal Processing	557
15.9 Optical Transversal Processor for Notch Filtering	560
15.9.1. Sampled Time Analysis	561
15.9.2. Continuous-Time Analysis	562
15.9.3. A Frequency Plane Implementation	564
15.10 Phased Array Processing	566
Appendix I	570
Appendix II	571
References	574
Bibliography	582
