

ENERGY AUDIT OF BUILDING SYSTEMS

An Engineering Approach

Moncef Krarti

TABLE OF CONTENTS

1

INTRODUCTION TO ENERGY AUDIT

ABSTRACT	1
1.1 INTRODUCTION	1
1.2 TYPES OF ENERGY AUDITS.....	2
1.2.1 Walk-Through Audit	2
1.2.2 Utility Cost Analysis	2
1.2.3 Standard Energy Audit	3
1.2.4 Detailed Energy Audit.....	4
1.3 GENERAL PROCEDURE FOR A DETAILED ENERGY AUDIT.....	4
1.4 COMMON ENERGY CONSERVATION MEASURES	9
1.4.1 Building Envelope	9
1.4.2 Electrical Systems	10
1.4.3 HVAC Systems	11
1.4.4 Compressed Air Systems.....	12
1.4.5 Energy Management Controls.....	12
1.4.6 Indoor Water Management.....	13
1.4.7 New Technologies	14
1.5 CASE STUDY	15
1.6 VERIFICATION METHODS OF ENERGY SAVINGS	24
1.7 SUMMARY.....	26

2

ENERGY SOURCES AND UTILITY RATE

STRUCTURES

ABSTRACT	27
2.1 INTRODUCTION	27
2.2 ENERGY RESOURCES.....	28
2.2.1 Electricity	29
2.2.2 Natural Gas.....	33
2.2.3 Petroleum Products.....	34
2.2.4 Coal	35
2.3 ELECTRICITY RATES	36
2.3.1 Common Features of Utility Rates	37
2.3.2 Block Pricing Rates	44
2.3.3 Seasonal Pricing Rates	45

2.3.4	Innovative Rates	47
2.3.5	Real Time Pricing Rates	50
2.4	NATURAL GAS RATES	59
2.5	UTILITY RATES FOR OTHER ENERGY SOURCES	61
2.6	SUMMARY	61

3

ECONOMIC ANALYSIS

ABSTRACT	65
3.1 INTRODUCTION	65
3.2 BASIC CONCEPTS	66
3.2.1 Interest Rate	66
3.2.2 Inflation Rate	69
3.2.3 Tax Rate	70
3.2.4 Cash Flows	71
3.3 COMPOUNDING FACTORS	73
3.3.1 Single Payment	73
3.3.2 Uniform-Series Payment	74
3.4 ECONOMIC EVALUATION METHODS AMONG ALTERNATIVES	76
3.4.1 Net Present Worth	76
3.4.2 Rate of Return	77
3.4.3 Benefit-Cost Ratio	77
3.4.4 Payback Period	78
3.4.5 Summary of Economic Analysis Methods	79
3.5 LIFE-CYCLE COST ANALYSIS METHOD	81
3.6 GENERAL PROCEDURE FOR AN ECONOMIC EVALUATION	83
3.7 FINANCING OPTIONS	85
3.7.1 Direct Purchasing	85
3.7.2 Leasing	86
3.7.3 Performance Contracting	86
3.8 SUMMARY	87
PROBLEMS	88

4

ENERGY ANALYSIS TOOLS

ABSTRACT	91
4.1 INTRODUCTION	91
4.2 RATIO-BASED METHODS	93
4.2.1 Introduction	93
4.2.2 Types of Ratios	94

4.2.3	Examples of Energy Ratios	95
4.3	INVERSE MODELING METHODS.....	97
4.3.1	Steady-State Inverse Models	97
4.3.2	PRISM Method.....	101
4.3.3	Dynamic Models	102
4.4	FORWARD MODELING METHODS.....	102
4.4.1	Steady-State Methods.....	103
4.4.2	Degree Day Methods.....	103
4.4.3	Bin Methods	104
4.4.4	Dynamic Methods	106
4.5	SUMMARY.....	109

5

ELECTRICAL SYSTEMS

ABSTRACT	111
5.1 INTRODUCTION	111
5.2 REVIEW OF BASICS.....	112
5.2.1 Alternating Current Systems	112
5.2.2 Power Factor Improvement	116
5.3 ELECTRICAL MOTORS	118
5.3.1 Introduction	118
5.3.2 Overview of Electrical Motors	119
5.3.3 Energy-efficient Motors	121
5.4 LIGHTING SYSTEMS.....	126
5.4.1 Introduction	126
5.4.2 Energy-Efficient Lighting Systems	128
5.4.3 Lighting Controls	131
5.5 ELECTRICAL APPLIANCES	134
5.5.1 Office Equipment	134
5.5.1 Residential Appliances	135
5.6 ELECTRICAL DISTRIBUTION SYSTEMS.....	140
5.6.1 Introduction	140
5.6.2 Transformers	141
5.6.3 Electrical Wires	144
5.7 POWER QUALITY.....	149
5.7.1 Introduction	149
5.7.2 Total Harmonic Distortion	150
5.8 SUMMARY.....	153
PROBLEMS	153

6

BUILDING ENVELOPE

ABSTRACT	157
6.1 INTRODUCTION	157
6.2 BASIC HEAT TRANSFER CONCEPTS	158
6.2.1 Heat Transfer from Walls and Roofs.....	158
6.2.2 Infiltration Heat Loss/Gain.....	160
6.2.3 Variable Base Degree Days Method	167
6.3 SIMPLIFIED CALCULATION TOOLS FOR BUILDING ENVELOPE AUDIT	169
6.3.1 Estimation of the Energy use Savings	170
6.3.2 Estimation of the BLC for the building.....	170
6.3.3 Estimation of the Degree Days.....	172
6.3.4 Foundation Heat Transfer Calculations.....	175
6.3.5 Simplified Calculation Method for Building Foundation Heat Loss/Gain.....	176
6.4 SELECTED RETROFITS FOR BUILDING ENVELOPE.....	186
6.4.1 Insulation of Poorly Insulated Building Envelope Components	186
6.4.2 Window Improvements	187
6.4.3 Reduction of Air Infiltration.....	189
6.5 SUMMARY.....	191
PROBLEMS	192

7

SECONDARY HVAC SYSTEMS RETROFIT

ABSTRACT	195
7.1 INTRODUCTION	195
7.2 TYPES OF SECONDARY HVAC SYSTEMS	195
7.3 VENTILATION.....	198
7.3.1 Reduced Ventilation Air.....	199
7.3.2 Air-Side Economizers	204
7.4 VENTILATION OF PARKING GARAGES	205
7.4.1 Existing Codes and Standards	206
7.4.2 General Methodology for Estimating the Ventilation Requirements for Parking Garages	208
7.5 INDOOR TEMPERATURE CONTROLS.....	213
7.6 UPGRADE OF FAN SYSTEMS	214
7.6.1 Introduction	214
7.6.2 Basic Principles of Fan Operation	214

7.6.3	Size Adjustment	220
7.7	COMMON HVAC RETROFIT MEASURES	221
7.7.1	Reduction of Outdoor Air Volume	221
7.7.2	Reset Hot or Cold Deck Temperatures	223
7.7.3	CV to VAV System Retrofit	224
7.8	SUMMARY	226
	PROBLEMS	226

8

CENTRAL HEATING SYSTEMS

	ABSTRACT	229
8.1	INTRODUCTION	229
8.2	BASIC COMBUSTION PRINCIPLES	230
8.2.1	Fuel Types	230
8.2.2	Boiler Configurations and Components	232
8.2.3	Boiler Thermal Efficiency	236
8.3	BOILER EFFICIENCY IMPROVEMENTS	240
8.3.1	Existing Boiler Tune-up	240
8.3.2	High Efficiency Boilers	242
8.3.3	Modular Boilers	242
8.4	SUMMARY	243
	PROBLEMS	244

9

COOLING EQUIPMENT

	ABSTRACT	247
9.1	INTRODUCTION	247
9.2	BASIC COOLING PRINCIPLES	248
9.3	TYPES OF COOLING SYSTEMS	251
9.3.1	Unitary AC Systems	252
9.3.2	Packaged AC Units	252
9.3.3	Heat Pumps	252
9.3.4	Central Chillers	253
9.4	MARKET ANALYSIS AND ENERGY EFFICIENCY OF COOLING SYSTEMS	254
9.4.1	Unitary Products	255
9.4.2	Chillers	257
9.5	ENERGY CONSERVATION MEASURES	259
9.5.1	Chiller Replacement	260
9.5.2	Chiller Control Improvement	262

9.5.3	Alternative Cooling Systems	265
9.6	SUMMARY	266
	PROBLEMS	266

10 ENERGY MANAGEMENT CONTROL SYSTEMS

	ABSTRACT	269
10.1	INTRODUCTION	269
10.2	BASIC CONTROL PRINCIPLES	270
10.2.1	Control Modes	270
10.2.2	Intelligent Control Systems	277
10.2.3	Types of Control Systems	278
10.3	ENERGY MANAGEMENT SYSTEMS	279
10.3.1	Basic Components of an EMCS	279
10.3.2	Typical Functions of EMCS	281
10.3.3	Design Considerations of an EMCS	282
10.3.4	Communication Protocols	283
10.4	CONTROL APPLICATIONS	284
10.4.1	Duty Cycling Controls	286
10.4.2	Outdoor Air Intake Controls	288
10.4.3	Optimum Start Controls	297
10.4.4	Cooling/Heating Central Plant Optimization	300
10.5	SUMMARY	302
	PROBLEMS	302

11 COMPRESSED AIR SYSTEMS

	ABSTRACT	305
11.1	INTRODUCTION	305
11.2	REVIEW OF BASIC CONCEPTS	306
11.2.1	Production of Compressed Air	306
11.2.2	Distribution of Compressed Air	313
11.2.3	Utilization of Compressed Air	316
11.3	COMMON ENERGY CONSERVATION MEASURES FOR COMPRESSED AIR SYSTEMS	317
11.3.1	Reduction of Inlet Air Temperature	318
11.3.2	Reduction of Discharge Pressure	319
11.3.3	Repair of Air Leaks	320
11.3.4	Other Energy Conservation Measures	322
11.4	SUMMARY	322

PROBLEMS	323
----------------	-----

12 THERMAL ENERGY STORAGE SYSTEMS

ABSTRACT	325
12.1 INTRODUCTION	325
12.2 TYPES OF TES SYSTEMS	326
12.3 PRINCIPLES OF TES SYSTEMS	329
12.4 CHARGING/DISCHARGING OF TES SYSTEMS	331
12.5 TES CONTROL STRATEGIES	337
12.5.1 Full Storage	337
12.5.2 Partial Storage	337
12.5.3 Utility Rates	339
12.6 MEASURES FOR REDUCING OPERATING COSTS	341
12.6.1 Simplified Feasibility Analysis of TES System	341
12.6.2 TES Control Improvement	344
12.7 SUMMARY	347
PROBLEMS	347

13 COGENERATION SYSTEMS

ABSTRACT	349
13.1 INTRODUCTION	349
13.2 TYPES OF COGENERATION SYSTEMS	350
13.2.1 Conventional Cogeneration Systems	350
13.2.2 Packaged Cogeneration Systems	353
13.2.3 Distributed Generation Technologies	353
13.3 EVALUATION OF COGENERATION SYSTEMS	355
13.3.1 Efficiency of Cogeneration Systems	355
13.3.2 Simplified Feasibility Analysis of Cogeneration Systems	358
13.3.3 Financial Options	363
13.4 SUMMARY	364
PROBLEMS	365

14 HEAT RECOVERY SYSTEMS

ABSTRACT	367
14.1 INTRODUCTION	367
14.2 TYPES OF HEAT RECOVERY SYSTEMS	368
14.3 PERFORMANCE OF HEAT RECOVERY SYSTEMS	372
14.4 SIMPLIFIED ANALYSIS METHODS	374
14.5 SUMMARY	381
PROBLEMS	382

15 WATER MANAGEMENT

ABSTRACT	383
15.1 INTRODUCTION	383
15.2 INDOOR WATER MANAGEMENT	385
15.2.1 Water-Efficient Plumbing Fixtures	385
15.2.2 Domestic Hot Water Usage	390
15.3 OUTDOOR WATER MANAGEMENT	392
15.3.1 Irrigation and Landscaping	393
15.3.2 Waste Water Reuse	396
15.4 SUMMARY	397
PROBLEMS	397

16 METHODS FOR ESTIMATING ENERGY SAVINGS

ABSTRACT	399
16.1 INTRODUCTION	399
16.2 GENERAL PROCEDURE	401
16.3 ENERGY SAVINGS ESTIMATION MODELS	403
16.3.1 Simplified Engineering Methods	403
16.3.2 Regression Analysis Models	406
16.3.3 Dynamic Models	411
16.3.4 Computer Simulation Models	415
16.4 APPLICATIONS	418
16.5 SUMMARY	419
