

DESIGN OF STEEL STRUCTURES

Based on the latest IS Codes
(IS 800 -1984 -2nd Rev.; and other codes)

L S NEGI

Contents

| | |
|--|--|
| <i>Preface</i> | <i>vii</i> |
| 1 Materials and Specifications | 1 |
| 1.1 Rolled steel sections 1 | 1.2 Types of structural steels 3 |
| 1.3 Specifications 4 | |
| 2 Structural Fasteners | 5 |
| 2.1 Riveting 5 | 2.2 Bolted joint 7 |
| 2.3 Types of riveted and bolted joints 8 | 2.4 Definitions 8 |
| 2.5 Failure of a riveted joint 9 | 2.6 Strength of a riveted joint 10 |
| 2.7 Assumptions in the theory of riveted joints 11 | 2.8 Efficiency of a joint 12 |
| 2.9 Design of riveted joints for axially loaded members 16 | 2.10 Welded joints 22 |
| 2.11 Advantages of welded joints 22 | 2.12 Disadvantages of welded joints 23 |
| 2.13 Types of welds and their symbols 23 | 2.14 Design of fillet welds 26 |
| 2.15 Design of butt welds 32 | 2.16 Design of plug and slot welds 33 |
| Problems 34 | |
| 3 Eccentric Connections | 36 |
| 3.1 Introduction 36 | 3.2 Riveted joints subjected to moment acting in the plane of the joint 36 |
| 3.3 Rivets and bolts in tension and shear 38 | 3.4 Design of eccentric connections 40 |
| 3.5 Butt-welded joint loaded eccentrically 46 | 3.6 Fillet-welded joint loaded eccentrically 47 |
| Problems 52 | |
| 4 Tension Members | 56 |
| 4.1 Introduction 56 | 4.2 Net sectional area 56 |
| 4.3 Permissible stress 60 | 4.4 Design of axially loaded tension member 65 |
| 4.5 Lug angle 74 | 4.6 Tension splice 76 |
| Problem 78 | |
| 5 Compression Members | 79 |
| 5.1 Introduction 79 | 5.2 Strength of an axially loaded compression member 79 |
| 5.3 Effective | |

strength 81 5.4 Maximum slenderness ratio 83
5.5 Compression member composed of two
components back-to-back 86 5.6 Typical cross-sections
of compression members 86 5.7 Design of compression
members 91 5.8 Lacing and battening for built-up
compression member 96 5.9 Column bases 107 5.10
Slab base 107 5.11 Gusseted base 110 5.12 Grillage
foundation 112 5.13 Column splices 116 Problems 117

6 Beam

6.1 Introduction 120 6.2 Design procedure 120 6.3
Built-up beams 138 6.4 Plate thickness 139 6.5 Simple
beam end connections 142 Problems 149

7 Beam Column

7.1 Introduction 152 7.2 Eccentricity of load 153 7.3
Eccentrically loaded base plates 156

8 Plate Girder

8.1 Introduction 160 8.2 Economical depth and self-
weight of plate girder 160 8.3 Design of web 162 8.4
Design of flanges 164 8.5 Curtailment of flange plates
168 8.6 Riveted connections 170 8.7 Web stiffeners
172 8.8 Web splice 174 8.9 Flange splice 182

9 Roof Trusses

9.1 Introduction 194 9.2 Components of a roof truss
194 9.3 Loads on roofs 195 9.4 Design of purlins 198
9.5 Procedure of designing a roof truss 201 Problems
211
