

TWO-DIMENSIONAL CRYSTALS

Igor Lyuksyutov
A. G. Naumovets
V. Pokrovsky

Contents

Preface	ix
Introduction	xi
Chapter 1. Order and Disorder in Two-Dimensional Crystals	1
1.1. Two-Dimensional Crystals: Experimental Examples	1
1.2. Structure of Two-Dimensional Crystals and Substrate	6
1.3. Order in Two-Dimensional Crystals at Finite Temperature	14
1.4. Phase Transitions	22
Chapter 2. Experimental Methods	37
2.1. Atomic Structure	37
2.2. Electronic Properties	56
2.3. Magnetic Properties	60
2.4. Lattice Dynamics, Diffusion, and Film Growth Mechanisms	62
2.5. Thermodynamic Characteristics	68
Chapter 3. Atomic Structure of Two-Dimensional Crystals (Experimental Data)	75
3.1. Interaction of Adsorbed Particles	75
3.2. Conditions for Formation of 2D Lattices	77

3.3.	Adlayers on the Basal Plane of Graphite	80
3.4.	Gases on the (100) Plane of Magnesium Oxide	84
3.5.	Films on the Close-Packed Planes of Metals	86
3.6.	Adlayers on Metal Planes with Furrowed Corrugation	99
3.7.	Adlayers on Metal Surfaces with Loose Corrugation	105
3.8.	Reconstructed Surfaces	107
3.9.	Overlayers on Semiconductor Surfaces	113
Chapter 4. Free Two-Dimensional Crystals		119
4.1.	Dislocation-Mediated Melting	119
4.2.	Two-Dimensional Liquid Crystals	131
4.3.	Free Two-Dimensional Crystals. Experimental Results	137
4.4.	Derivation of Some Formulae	148
Chapter 5. Commensurate Crystals		153
5.1.	Interaction of Adatoms and Lattice Symmetry	153
5.2.	Universality Classes	161
5.3.	Two-Dimensional Statistical Models and Their Experimental Realizations	170
5.4.	Striped Superstructures at Finite Temperature	182
5.5.	Phase Diagrams	187
Chapter 6. Incommensurate Crystals at $T = 0$		193
6.1.	Resonance Approximation	193
6.2.	Soliton Lattice	196
6.3.	Spectrum of Small Oscillations	201
6.4.	Lattice Discreteness Effects	204
6.5.	Pinning of the Soliton Lattice	209
6.6.	Orientational Epitaxy	212
6.7.	Two-Dimensional Models of Incommensurate Crystals	214
6.8.	Elastic Substrate	217
Chapter 7. Thermodynamics of Two-Dimensional Incommensurate Crystals		221
7.1.	Collisions of Solitons	221
7.2.	Melting of the Striped Soliton Lattice	224
7.3.	Two-Dimensional Soliton Lattices	232
7.4.	Experimental Investigations of Incommensurate Crystals	242
Chapter 8. Solitons as Fermions		247
8.1.	Quantum Fluctuations in a One-Dimensional Incommensurate Crystal	248

8.2.	Transfer Matrix and Thermodynamics of a Two-Dimensional Incommensurate Crystal	253
8.3.	Dislocations and the C–I Transition in a Uniaxial Crystal	257
8.4.	Thermal Depinning of Soliton Structures	261
Chapter 9. Equilibrium Shape of a Crystal and the Roughening Transition		269
9.1.	Equilibrium Shape of a Crystal	270
9.2.	The Roughening Transition	274
9.3.	Roughening Transition and Equilibrium Crystal Shape Near the Densely Packed Surfaces	279
9.4.	Phase Transitions on the Vicinal Surfaces	285
9.5.	Equilibrium Shape of Crystals over a Wide Range of Angles	290
Chapter 10. Two-Dimensional Crystals and Surface Defects		303
10.1.	Defects and Order in Commensurate Two-Dimensional Crystals	304
10.2.	Defects and the Commensurate–Incommensurate Phase Transition	310
10.3.	Destruction of Order in an Incommensurate Crystal	315
10.4.	Solitons and Mass Transfer in Incommensurate Crystals	319
Chapter 11. From Two to Three Dimensions		327
11.1.	Wetting and Adsorption	327
11.2.	Wetting Critical Phenomena	334
11.3.	Two-Dimensional Crystalline Order in Multilayer Films	339
11.4.	Wetting in Two Dimensions	344
Chapter 12. Effects of Structure on Physical and Chemical Properties of Two-Dimensional Systems		349
12.1.	Surface Diffusion of Adsorbed Particles	349
12.2.	Effect of Substrate Structure on Wetting	358
12.3.	Electronic Properties	359
12.4.	Kinetics and Energetics of Adsorption	368
12.5.	Catalytic Properties	375
