

Corrosion Testing Made Easy

Erosion-Corrosion

Pierre Roberge
B.C. Syrett, Series Editor

Contents

List of Figures	ix
List of Tables	xiii
Introduction	1
Erosion-Corrosion Basics	3
Factors Affecting Erosion-Corrosion	3
Material Factor	3
Environment Factor	4
Dissolved and Suspended Matter	7
Dissolved Oxygen	7
Seawater	7
Biofouling and Microbiologically Influenced Corrosion (MIC)	7
Fluid Movement	7
Fluid Flow and Surface Shear Stress	7
Fluid Movement and Materials	8
Fluid Movement and Erosion-Corrosion Mechanisms	8
Fluid Movement and Other Forms of Localized Corrosion	9
Fluid Movement and Flow Disturbances	10
Temperature Factor	10
Surface Roughness	11
Galvanic Interactions	12
Thermodynamics	13
Reaction Kinetics	14
Kinetics Under Polarization	14
Electrolytic Resistance (Ohmic Drop)	15
Activation Polarization	15
Concentration Polarization	17
Fluid Flow Basics	19
Turbulent Boundary Layer and Wall Shear Stress	22
Erosion-Corrosion Mechanisms	25
Solid Particle Impingement	28

Liquid Droplet Impingement	30
Air Bubble Impingement	30
Cavitation	31
Erosion-Corrosion Testing	33
General Considerations	33
Test Selection	33
Preparation of Test Specimens	33
Assessment and Reliability of Test Results	34
Flow Field Definition	34
Comparative Analysis Between Field and Laboratory Tests	35
Mass Transfer Measurements	36
Dissolving Wall Method	36
Limiting Current Density (LCD) Technique	37
Analogy with Heat Transfer	39
Mass Transfer Coefficient and Surface Geometry	39
Rotating Systems	40
Rotating Disk	41
Rotating Cylinder	43
Rotating Cage	51
Flow Systems	53
Flow Loop	55
Nozzle or Orifice	65
Impinging Jet	67
Appendix	85
References	87
Index	91
