Contents

Introduction: Corrosion Testing and Those Who Engage in It	1
Before We Begin	1
What Do Corrosion Research Technicians Do?	1
Typical Activities of Corrosion Research Technicians	1
1. General Operations and Laboratory Procedures	3
Cleanliness and Good Housekeeping	5
Contact With Spilled Chemicals	5
Eye Protection	7
Body Protection	7
Handling Volatile Liquids and Gases	8
Gas Masks and Respirators	10
Cleaning Up Spills	10
Mercury	11
Fire	11
Ignition Sources	12
Precautions Regarding Electrical Equipment	14
Fire Extinguishers and Classes of Fires	14
Resources for Further Study by the Corrosion Technician	15
References	15
2. Corrosion Technology	17
Wet Corrosion	17
General Corrosion or Uniform Corrosion	17
Dealloying or Parting	18
Galvanic Corrosion	19
Pitting	23
Concentration Cells	25
Crevice Corrosion	25
Occluded Cells	27
Metal Ion Concentration Cells	27
Intergranular Corrosion	29
Erosion-Corrosion	30
Cavitation	31
Environmental Cracking	31
Stress Corrosion Cracking	32

Hydrogen-Induced Cracking	32
Liquid Metal Cracking	32
Corrosion Fatigue	32
Fretting Corrosion	33
Fretting Corrosion Fatigue	34
Influence of Paints and Other Coatings	34
Microbiologically Influenced Corrosion	35
Methods for Preventing and Controlling Wet Corrosion	35
Dry Corrosion	36
Corrosion Theory and Terminology	36
Electrochemistry	36
The Electrode	37
The Auxiliary Electrode	37
The Electrochemical Cell	37
The Anode	37
The Anion	37
The Cathode	37
The Cation	37
The Test Electrode or Working Electrode	38
Electrode Potential	38
Corrosion Potential	38
Polarization	38
Overvoltage	38
The Reference Electrode	43
Control of Potential	46
Passivity	48
Resistance	48
Electronic Resistance	50
Ionic Resistance	51
Polarization Resistance	52
Current	55
Faraday's Law	57
Cathodic Protection	59
Anodic Protection	59
References	60
3. The Corrosion Research Laboratory	63
Preparing Solutions	64
Distinction Between Analytical and Equilibrium Concentrations	66
Chemical Calculations and Computations	66
Mass Percent	66
Volume Percent	67
Conversion of Mass Percent to Volume Percent	67
Grades of Chemicals	68
Reagent Analyzed or Reagent Grade	68
Primary Standard	68

Solutions and Reagents.....	68
Removing Solid Materials from Containers	73
Pouring Liquids from Bottles	74
Pouring Liquids from Beakers and Other Containers	76
Transferring Solutions from Pipettes and Medicine Droppers	76
Mixing Solutions	76
Pumps Used for Transferring Liquids.....	76
Common Hazardous Chemicals	78
Compressed Gases	79
Leaking Cylinders.....	88
Gas Regulators	90
Bulk Liquids.....	90
Glassware and Stoppers	90
Handling Ground Glass Surfaces	99
Lubricating Stopcocks	101
Storing Glassware	101
Assembling Ground-Joint Glassware	102
Plastic Equipment	103
Cleaning Plastic Laboratory Ware	103
Sterilizing Plastic Laboratory Ware	103
The Desiccator	105
Measuring Temperature	112
Liquid Thermometers	112
Bimetallic Expansion Thermometers	114
Thermistors	114
Thermocouples	114
Pyrometers	115
Optical Pyrometers	115
Single-Temperature Indicators	115
Heating Chemicals	115
Boiling Liquids	115
Heating Organic Liquids.....	119
Flameless Heating Devices.....	120
Laboratory Hot Plates and Stirrers	123
Other Means of Heating and Drying	124
Measuring Pressure and Vacuum.....	124
The Balance	127
Rules for Proper Use.....	127
Capacity and Precision	129
Errors in Determining Mass.....	132
Measuring pH.....	133
pH and pOH Theory	133
The pH Meter	133
Standardization Using Buffers	137
Electrode Maintenance	139

Filtration	140
Filter Media	141
Paper	141
Membrane Filters	141
Fritted Glassware	141
Filtering Accessories	144
Filter Supports	144
Filter Aids	144
Wash Bottles	145
Operations Involved in Filtration	145
Decantation	147
Washing	147
Transferring the Precipitate	147
Gravity Filtration	147
Vacuum Filtration	148
Büchner Funnels	149
Sintered Glass Crucibles	149
Porous Porcelain and Monroe Crucibles	150
Gravimetric Analysis	151
Preparing the Crucible	152
Filter Paper	152
Cooling the Crucible to Constant Mass	153
Volumetric Analysis	153
Liter	154
Titration	154
Back Titration	154
Standard Solution	154
Primary Standard	154
Equivalence Point	154
Endpoint	154
Titration Error	154
Reading the Meniscus	154
Typical Physical Changes During Volumetric Analysis	155
Tools of Volumetric Analysis	155
Volumetric Flasks	156
Introducing a Standard	156
Dilution to the Mark	156
Pipettes	157
Burettes	160
Filling a Burette	162
The Stopcock	162
Titration	162
Centrifugation	164
Precautions	166
Water for Laboratory Use	167

Tubing Materials	169
Synthetic and Natural Rubber Tubing Materials	169
Tygon™ Tubing	171
References	174
4. Corrosion Testing	174
Laboratory vs Field Tests	175
Test Factors Associated Primarily with the Metal	175
Test Factors Associated Primarily with the Environment	179
Test Factors Involving Both the Metal and Its Environment	180
Accelerated Tests of Corrosion Behavior	181
Potentiodynamic Polarization Measurements	181
Atmospheric Corrosion Tests	184
Immersion Tests	184
Tests in the Vapor Phase	189
Tests with Relative Motion Between Specimen and Environment	189
Rotating Disk Tests	189
Flow Simulation Tests	190
Jet Impingement Tests	190
Paddle-Wheel Tests	190
Venturi Tests	190
Service Simulation Tests	190
Spool Tests	190
Environmental Cracking Tests	192
Crevice Tests	197
High-Temperature Oxidation (Dry Corrosion) Tests	197
Discontinuous Methods of Assessing Reaction Rates	198
Continuous Methods of Assessing Reaction Rates	199
Mass Gain Method	199
Gas Consumption Methods	200
Characterizing Materials	202
Size and Geometry of Specimens	202
Corrosiveness of the Environment	203
Identifying Specimens	204
Replicating Specimens	204
Machining Specimens	204
Handling Specimens	205
Control Specimens	206
Arranging Specimens for Testing	206
Test Fixtures for Laboratory and Field Tests	206
Duration of Tests	206
References	206
5. Observing and Assessing Test Results	209
Planning the Work	209
Data Recording and the Laboratory Notebook	210

The Final Report	210
Analytical Data	211
Determinate Errors	211
Indeterminate Errors	211
Reporting Numerical Quantities	211
Precision of Measurements	211
Statistics	211
Productivity and Efficiency	212
Observations After Testing but Prior to Cleaning	212
Cleaning Prior to Weighing	213
Weighing	213
Visual Examination	215
Microscopic Observations	215
Corrosion Rate Calculations	216
Theoretical Weight Loss	216
Preparing Specimens for Metallographic Examination	217
Examining Oxides or Corrosion Products on Specimen Surfaces	218
Sectioning Specimens	218
Cleaning Specimens	222
Mounting Specimens	222
Grinding Specimens	224
Rough Grinding	224
Intermediate Grinding	224
Polishing Techniques	225
Metallographic Polishing Abrasives	228
Diamond Dust	228
Other Polishing Media	229
Metallographic Polishing Cloths	229
Preliminary Lapping Procedure	230
Final Lapping Procedure	230
Electrolytic Polishing	231
Current-Voltage Relationship	231
Safety Precautions	234
Etching Specimens for Microscopic Examination	240
Examining Specimens for Oxidation Experiments	241
The Metallographic Microscope and Its Use	244
The Principle of the Microscope	244
Properties of Objective Lenses	245
Numerical Aperture	246
Resolving Power	246
Vertical Resolution	247
Curvature of the Field	247
Microscope Eyepieces	247
Making Measurements Within the Microscope	249
Care of Optical Parts	249
Photomicrography	250

Surface Analytical Techniques	250
Scanning Auger Microprobe.....	250
Scanning Electron Microscopy (SEM)	252
X-ray Diffraction (XRD).....	254
X-ray Photoelectron Spectroscopy (XPS, ESCA).....	255
Electron Probe Microanalysis (EMP)	256
Energy Dispersive X-ray Spectroscopy (EDS)	257
References	257
Glossary	259
Appendixes	
Appendix A: ASTM Standards and Specifications for Corrosion Testing	265
Appendix B: Selected NACE Standards	269
Appendix C: Greek Alphabet	273
Appendix D: Temperature Conversions	275
Appendix E: Melting Points and Atomic Weights of Elements	277
Appendix F: Standard Symbols and Constants	279
Appendix G: Derived Units of the International System	281
Appendix H: Length Conversion Factors	283
Appendix I: Area Conversion Factors	285
Appendix J: Force Conversion Factors	285
Appendix K: Volume and Capacity Conversion Factors	287
Appendix L: Mass Conversion Factors	289
Appendix M: Pressure/Stress Conversion Factors	291
Appendix N: Energy/Work and Power Conversion Factors	293
Appendix O: Elements Present in Solution in Sea Water	295
Appendix P: Surface Areas and Volumes	297

CAUTION

The test methods described in this publication may involve hazardous materials, operations, and equipment. This publication does not purport to address all of the safety problems associated with the test methods. It is the responsibility of whoever uses these test methods to consult and establish appropriate safety and health practices and to determine the applicability of regulatory limitations before use.
