

Second Edition

Meteorology
for
Scientists and Engineers

Roland B. Stull

CONTENTS

CONTENTS SUMMARY

Preface	•	xiii
Chapter 1	• The Atmosphere	1
Chapter 2	• Radiation	23
Chapter 3	• Heat	43
Chapter 4	• Boundary Layers	65
Chapter 5	• Moisture	95
Chapter 6	• Stability	119
Chapter 7	• Cloud Formation	143
Chapter 8	• Precipitation	159
Chapter 9	• Dynamics	179
Chapter 10	• Local Winds	205
Chapter 11	• Global Circulation	223
Chapter 12	• Air Masses & Fronts	251
Chapter 13	• Cyclones	281
Chapter 14	• Numerical Weather Prediction	311
Chapter 15	• Thunderstorms	337
Chapter 16	• Hurricanes	357
Chapter 17	• Air Pollution Dispersion	379
Chapter 18	• Climate Change	399
Chapter 19	• Optics	413
Appendix A	• Fundamentals of Science	435
Appendix B	• Constants & Conversion Factors	445
Appendix C	• Notation	447
Appendix D	• Additional Reading Material	459
Appendix E	• Answers to Selected Exercises	463
Appendix F	• Syllabus	467
Appendix G	• Correspondences	469
Appendix H	• Turbulence Closure	471
Index	•	481

CHAPTER 1 • The Atmosphere 1

Introduction	1
Meteorological Conventions	2
[<i>On Doing Science: Descartes and the Scientific Method</i>]	3
Thermodynamic State	4
Pressure	4
[<i>Focus: e-Folding Distance</i>]	5
Density	6
Temperature	7
[<i>Focus: Escape Velocity</i>]	8
Equation of State – Ideal Gas Law	8
Hydrostatic Equilibrium	9
[<i>Beyond Algebra: Physical Interpretation of Equations</i>]	10
Hypsometric Equation	10
[<i>Beyond Algebra: Hypsometric Eq.</i>]	11
Atmospheric Structure	12
Standard Atmosphere	12
Layers of the Atmosphere	13
Process Terminology	14
Summary	14
Threads	14
Exercises	15
Numerical Problems	15
Understanding & Critical Evaluation	17
Web-Enhanced Questions	18
Synthesis Questions	20
[<i>Science Graffiti</i>]	21

CHAPTER 2 • Radiation 23

Orbital Factors	23
Planetary Orbits	23
[<i>Focus: Satellite Orbits</i>]	24
Orbit of the Earth	25
Seasonal Effects	26
Daily Effects	26
Sunrise, Sunset & Twilight	27
Flux	28

Radiation Principles	29
Propagation	29
Emission	30
[<i>On Doing Science: Scientific Laws – The Myth</i>]	31
[<i>Science Graffito</i>]	31
[<i>On Doing Science: Seek Solutions</i>]	32
[<i>Beyond Algebra: Incremental Changes</i>]	32
Distribution	32
Average Daily Insolation	34
Absorption, Reflection & Transmission	35
Beer's Law	36
Surface Radiation Budget	36
Solar	37
Longwave (IR)	37
Net Radiation	37
Summary	38
Threads	38
Exercises	39
Numerical Problems	39
Understanding & Critical Evaluation	40
Web-Enhanced Questions	41
Synthesis Questions	42

CHAPTER 3 • Heat 43

Sensible and Latent Heats	43
Sensible	43
Latent	44
Lagrangian Heat Budget – Part 1: Unsaturated	45
First Law of Thermodynamics	45
Lapse Rate	46
Adiabatic Lapse Rate	46
[<i>Beyond Algebra: Adiabatic Lapse Rate</i>]	47
Potential Temperature	47
Thermodynamic Diagrams – Part 1: Dry	
Adiabatic Processes	48
[<i>Focus: Spreadsheet Thermodynamics</i>]	48
Eulerian Heat Budget	49
First Law of Thermodynamics – Revisited	49
Advection	50
Conduction & Surface Fluxes	51
Turbulence	53
Radiation	55
Internal Source – Latent Heat	55
Net Heat Budget	56
Surface Heat Budget	56
Heat Budget	57
Bowen Ratio	57
Apparent Temperatures	59
Wind Chill	59
Heat Index	60

Summary	60
Threads	61
Exercises	61
Numerical Problems	61
Understanding & Critical Evaluation	62
Web-Enhanced Questions	63
Synthesis Questions	64
[<i>Science Graffito</i>]	64

CHAPTER 4 • Boundary Layers 65

Static Stability — A Preview	65
Explanation	65
Rules of Thumb for Stability in the ABL	66
Boundary-Layer Formation	67
Tropospheric Constraints	67
[<i>Focus: Engineering Boundary Layers</i>]	67
Synoptic Forcings	68
ABL Structure and Evolution	69
Temperature	70
Cumulative Heating or Cooling	70
Nighttime	70
Daytime	71
[<i>Beyond Algebra: Cumulative Heating</i>]	71
Temperature-Profile Evolution	71
Idealized Evolution	71
Seasonal Differences	72
Stable-Boundary-Layer Temperature	73
Mixed-Layer Temperature, Entrainment	74
Wind	76
Wind Profile Evolution	76
Drag, Stress, Friction Velocity, Roughness	
Length	77
Log Profile in the Neutral Surface Layer	79
Log-Linear Profile in the Stable Surface Layer	80
Profile in the Convective Radix Layer	81
Turbulence	82
Mean and Turbulent Parts	82
Variance and Standard Deviation	83
Isotropy	84
Turbulence Kinetic Energy	84
[<i>Science Graffito</i>]	85
Free and Forced Convection	86
Turbulent Fluxes and Covariances	87
Summary	89
Threads	89
Exercises	90
Numerical Problems	90
Understanding & Critical Evaluation	91
Web-Enhanced Questions	93
Synthesis Questions	94

CHAPTER 5 • Moisture 95

- Saturation Vapor Pressure 95
 - Vapor Pressure 95
 - Saturation 95
 - [*Beyond Algebra: Clausius-Clapeyron Eq.*] 97
 - [*Focus: Boiling*] 98
- Humidity Variables 99
 - Mixing Ratio 99
 - Specific Humidity 99
 - Absolute Humidity 99
 - Relative Humidity 99
 - Dew Point Temperature 100
 - Saturation Level or
 - Lifting Condensation Level (LCL) 101
 - Wet-Bulb Temperature 101
 - More Relationships Between Moisture Variables 102
 - [*Focus: Why so Many Moisture Variables?*] 102
- Total Water Mixing Ratio 103
- Lagrangian Water Budget 103
 - Water Conservation 103
 - Thermo Diagrams – Part 2: Isohumes 104
- Eulerian Water Budget 105
 - Horizontal Advection 105
 - Precipitation 105
 - Surface Moisture Flux 106
 - Turbulent Transport 107
 - [*On Doing Science: Look for Patterns*] 108
- Lagrangian Heat Budget — Part 2: Saturated 109
 - Saturated Adiabatic Lapse Rate 109
 - Thermo Diagrams – Part 3: Saturated Adiabats 110
 - [*Focus: Spreadsheet Thermodynamics 2*] 111
 - Liquid-Water and Equivalent Potential Temps. 111
- Summary 113
 - Threads 113
- Exercises 113
 - Numerical Problems 113
 - Understanding & Critical Evaluation 115
 - Web-Enhanced Questions 117
 - [*Science Graffito*] 117
 - Synthesis Questions 118

CHAPTER 6 • Stability 119

- [*Science Graffito*] 119
- Thermodynamic Diagrams – Part 4: Applications 120
 - [*Full Thermo Diagram: T vs. $\log P$*] 121
 - [*Full Thermo Diagram: θ vs. z*] 122
- State 123

- Dry (Unsaturated) Processes 124
- Moist (Saturated) Processes & Liquid Water 124
- Precipitation 125
 - Radiative Heating/Cooling 126
- Parcels vs. Environment 128
- Buoyancy 128
- Static Stability 130
 - Unstable 130
 - Neutral 131
 - Stable 131
- Thermo Diagrams for Boundary Layers 132
 - Mixed-Layer Depth Determination 132
 - [*Boundary Layer Thermo Diagram: T vs. $\log P$*] 133
 - [*Boundary Layer Thermo Diagram: θ vs. z*] 134
- Brunt-Väisälä Frequency 135
 - [*Beyond Algebra: Brunt-Väisälä Frequency*] 136
- Dynamic Stability 136
 - Richardson Number 136
 - [*Focus: LeChatelier's Principle*] 137
 - Turbulence Determination 137
- Summary 138
 - Threads 138
- Exercises 138
 - Numerical Problems 138
 - Understanding & Critical Evaluation 139
 - Web-Enhanced Questions 140
 - Synthesis Questions 141

CHAPTER 7 • Cloud Formation 143

- Cloud Development 143
 - Active – Cumuliform 143
 - Passive – Stratiform 144
 - Stratocumulus 145
- Cloud Sizes 145
- Fractal Cloud Shapes 146
 - Fractal Dimension 146
 - Measuring Fractal Dimension 147
- Processes Causing Saturation 147
 - Cooling and Moisturizing 147
 - Mixing 148
- Clouds and Upslope Fog 149
- Other Fogs 149
 - Processes 149
 - Advection Fog 150
 - [*Beyond Algebra: Advection Fog*] 150
 - Radiation Fog 151
 - Dissipation of Well-Mixed (Advection & Radiation) Fogs 153
 - [*Science Graffito*] 153
- Summary 154
 - Threads 154

Exercises	155
Numerical Problems	155
Understanding & Critical Evaluation	156
Web-Enhanced Questions	156
Synthesis Questions	157
[<i>On Doing Science: Cargo Cult Science</i>]	158

CHAPTER 8 • Precipitation 159

[<i>Focus: Meteors and Meteorology</i>]	160
Nucleation of Liquid Droplets	160
Cloud Condensation Nuclei (CCN)	160
Curvature and Solute Effects	160
Critical Radius	162
[<i>Beyond Algebra: Critical Radius</i>]	163
Haze	163
Activated Nuclei	164
Nucleation of Ice Crystals	164
Processes	164
Nuclei	165
Droplet Growth by Diffusion	165
Max Droplet Radius via Diffusion	165
Growth Rate	166
Ice Growth by Diffusion	167
Ice Crystal Habits	167
Growth Rates	168
The Wegener-Bergeron-Findeisen (WBF)	
Process	168
Collision and Collection	169
Terminal Velocity of Droplets	169
Cloud Droplets	169
Rain Drops	170
Processes	170
Droplet Size Distributions	170
Precipitable Water	171
Rainfall Rate Estimated by Radar	172
[<i>Science Graffito</i>]	172
Summary	173
Threads	173
Exercises	173
Numerical Problems	173
Understanding & Critical Evaluation	175
Web-Enhanced Questions	176
Synthesis Questions	177
[<i>On Doing Science: Consequences</i>]	178

CHAPTER 9 • Dynamics 179

Newton's Second Law of Motion	180
Lagrangian Momentum Budget	180
[<i>On Doing Science: Be Creative</i>]	180
[<i>Focus: In Newton's Own Words</i>]	181
Eulerian Momentum Budget	181
[<i>Science Graffito</i>]	181
Forces	182
Advection	182
Pressure Gradient Force	182
Centrifugal Force	183
Coriolis Force	184
[<i>Focus: Coriolis Force</i>]	184
Turbulent Drag Force	186
Full Equations of Motion	186
Height Contours on Isobaric Surfaces	187
Winds	188
Geostrophic Wind	188
Gradient Wind	189
Boundary-Layer Wind	192
Boundary-Layer Gradient (BLG) Wind	193
Cyclostrophic Wind	195
Full Equations of Motion - Revisited	195
Mass Conservation	196
Continuity Equation	196
Incompressible Continuity Equation	196
Boundary-Layer Pumping	197
Summary	199
Threads	199
Exercises	199
Numerical Problems	199
Understanding & Critical Evaluation	201
Web-Enhanced Questions	202
Synthesis Questions	203

CHAPTER 10 • Local Winds 205

Scales of Motion	205
Wind-Speed Probability	206
Wind Turbines and Power Generation	207
Vertical Equation of Motion	207
Thermally Driven Circulations	208
Thermals	208
Anabatic Wind	209
Katabatic Wind	209
Streamlines, Streaklines, and Trajectories	210

Bernoulli's Equation	211
Dynamic vs. Static Pressure	212
Venturi Effect and Gap Winds	212
Downslope Winds – Bora and Foehn	213
[<i>Science Graffito</i>]	213
Hydraulic Jump	214
[<i>On Doing Science: Simple is Best</i>]	214
Mountain Waves	215
Natural Wavelength	215
Lenticular Clouds	215
Froude Number	216
Mountain-Wave Drag	217
Foehns (again) and Chinooks	217
Summary	218
Threads	218
Exercises	219
Numerical Problems	219
Understanding & Critical Evaluation	220
Web-Enhanced Questions	221
Synthesis Questions	222

CHAPTER 11 • Global Circulation 223

Nomenclature	224
Differential Heating	224
Meridional Temperature Gradient	224
[<i>Beyond Algebra: Temperature Gradient</i>]	225
Radiative Forcings	226
[<i>On Doing Science: Toy Models</i>]	227
Heat Transport Needed	227
Thermal Wind Relationship	228
Thickness	228
Thermal Wind	229
Jet Stream	230
Baroclinicity	230
Angular Momentum	232
Vorticity	233
Relative Vorticity	234
[<i>Focus: Solid-Body Relative Vorticity</i>]	234
Absolute Vorticity	234
Potential Vorticity	234
Isentropic Potential Vorticity	235
Midlatitude Troughs and Ridges	235
[<i>Beyond Algebra: Vorticity of a Wave</i>]	236
Barotropic Instability & Rossby Waves	236
[<i>Beyond Algebra: The Beta Plane</i>]	237
Baroclinic Instability & Planetary Waves	238
Qualitative Model	239
Quantitative Approach	239
[<i>Focus: Rossby Radius of Deformation and Geostrophic Adjustment - Part 1</i>]	240

Heat Transport	242
Momentum Transport	242
Three-Band General Circulation	243
Ekman Spiral in the Ocean	244
Summary	245
Threads	245
Exercises	246
Numerical Problems	246
Understanding & Critical Evaluation	247
Web-Enhanced Questions	248
Synthesis Questions	249

CHAPTER 12 • Air Masses & Fronts 251

Anticyclones or Highs	251
Characteristics	251
Vertical Structure	252
Air Masses	252
Creation	253
Warm Air Masses	253
Cold Air Masses	254
Modification	255
[<i>Science Graffito</i>]	256
Synoptic Weather Maps	257
Weather Observations	257
Map Analysis, Plotting & Isoplething	260
Surface Fronts	261
[<i>Focus: The Bergen School of Meteorology</i>]	261
Horizontal Structure	261
Warm Fronts	261
Cold Fronts	261
Vertical Structure	262
Geostrophic Adjustment - Part 2	265
[<i>Beyond Algebra: Geostrophic Adjustment</i>]	266
Frontogenesis	267
Kinematics	267
Confluence	268
Shear	268
Tilting	268
Thermodynamics	269
Dynamics	269
Occluded Fronts and Mid-Tropospheric Fronts	271
Upper-Tropospheric Fronts	272
Dry Lines	273
Summary	274
Threads	275
Exercises	275
Numerical Problems	275
Understanding & Critical Evaluation	276
Web-Enhanced Questions	277
Synthesis Questions	278

CHAPTER 13 • Cyclones 281

- Case Study of a Cyclone over North America 281
 - Overview and Storm Track 281
 - Storm Data 282
- Cyclogenesis 283
- Lee Cyclogenesis 284
 - Stationary Planetary Waves 284
 - Conservation of Potential Vorticity 285
 - Equatorward Propagation Along the Lee Side 285
 - [Focus: Maximum Advection on WX Maps] 286
- Cyclone Spin-Up 287
 - Vorticity Tendency 287
 - Quasi-Geostrophic Approximation 288
 - Application to Idealized Weather Patterns 289
- Upward Motion 290
 - Continuity Effects 290
 - Jet-Stream Curvature 290
 - Jet Streaks 291
 - Omega Equation 293
- Sea-level Pressure Tendency 295
 - Mass Budget 295
 - Diabatic Heating 296
 - Net Pressure Tendency 297
- Self Development of Cyclones 298
 - Condensation 298
 - Temperature Advection 299
 - [Science Graffito & On Doing Science] 299
- Iso-surfaces and Their Utility 299
 - Height 299
 - Pressure 300
 - Thickness 300
 - Potential Temperature 300
 - Potential Vorticity (PVU) 301
- Case Study of a Cyclone (continued) 301
 - Surface Charts 301
 - Isobaric Charts at 85, 70, 50, and 25 kPa 302
 - Vertical Cross Section 304
 - 100 - 50 kPa Thickness Chart 305
- Summary 305
 - Threads 305
 - [Beyond Algebra: The Omega Equation] 306
- Exercises 306
 - Numerical Problems 306
 - Understanding & Critical Evaluation 307
 - Web-Enhanced Questions 309
 - Synthesis Questions 310

CHAPTER 14 • Numerical Weather Prediction 311

- Solutions to Atmospheric Equations 312
 - Approximate Solutions 312
 - Parameterizations and Models 312
 - [Focus: History of NWP] 313
 - [On Doing Science: Mathematics] 315
- Grid Points 315
- Finite-Difference Equations 316
- Numerical Stability 317
- The Numerical-Forecast Process 318
 - Balanced Mass and Flow Fields 318
 - Data Assimilation and Analysis 319
 - [Focus: The Pacific Data Void] 320
 - Forecasts 321
 - [Focus: Electricity & Operational Reliability] 321
 - Case Study: 22 - 25 Feb 1994 - N. America 322
 - Post-processing 323
 - Forecast Refinement 323
- Forecast Quality 324
 - Accuracy vs. Skill 324
 - Verification Scores 324
- Nonlinear Dynamics and Chaos 327
 - Predictability 327
 - Lorenz Strange Attractor 327
 - [Science Graffito] 328
 - Ensemble Forecasts 329
 - [On Doing Science: Scientific Revolutions] 330
- Useful Indicators on Weather Maps Produced By NWP 330
- Elements of a Good Weather Briefing 331
- Summary 331
 - Threads 332
 - [Science Graffito] 332
- Exercises 332
 - Numerical Problems 332
 - Understanding & Critical Evaluation 333
 - Web-Enhanced Questions 334
 - Synthesis Questions 335
 - [Science Graffiti] 336
 - [Science Graffito] 336

CHAPTER 15 • Thunderstorms 337

- Convective Conditions 337
 - Conditional Instability 337
 - Trigger Mechanisms 338
- CAPE 338
- Severe-Thunderstorm Environment 339

- Downbursts and Gust Fronts 340
 - Precipitation Drag 340
 - Evaporative Cooling 341
 - Gust Fronts 341
 - [Focus: Downbursts & Flight Operations] 342
- Lightning and Thunder 343
 - Lightning 343
 - Thunder 345
- Tornadoes 347
 - Origin of Rotation 347
 - Mesocyclones and Helicity 348
 - Tornadoes and Swirl Ratio 349
 - Core Pressure Deficit 350
 - Tornado Intensity Scales 350
- Doppler Radar 351
- Summary 352
 - Threads 352
 - [Science Graffito] 352
- Exercises 353
 - Numerical Problems 353
 - Understanding & Critical Evaluation 354
 - Web-Enhanced Questions 355
 - Synthesis Questions 356

CHAPTER 16 • Hurricanes 357

- Dynamics 358
 - Initial Spin Up 358
 - Subsequent Development 359
- Thermodynamics 359
 - Warm Core 359
 - [Beyond Algebra: Pressure Reversal] 360
 - [Focus: Warm vs. Cold Core Cyclones] 361
 - [Beyond Algebra: Warm Core Winds] 361
 - Carnot Cycle 362
 - [Focus: The Power of Hurricanes] 363
- A Hurricane Model 364
 - Pressure Distribution 364
 - Tangential Velocity 364
 - [Focus: Saffir-Simpson Hurricane Scale] 365
 - Radial Velocity 366
 - Vertical Velocity 367
 - Temperature 367
 - [Science Graffito] 367
 - Composite Picture 368
- Storm Surge 369
 - Atmospheric Pressure Head 369
 - Ekman Transport 369
 - Kelvin Wave 370
- Surface Wind-Waves 371
 - [Focus: Beaufort Wind Scale] 372
- Summary 372

- Threads 373
- Exercises 373
 - Numerical Problems 373
 - Understanding & Critical Evaluation 374
 - Web-Enhanced Questions 375
 - Synthesis Questions 377
 - [Science Graffito] 377

CHAPTER 17 • Air Pollution Dispersion 379

- Dispersion Factors 380
- Air Quality Standards 380
- Turbulence Statistics 381
 - Review of Basic Definitions 381
 - Isotropy (again) 382
 - Pasquill-Gifford (PG) Turbulence Types 383
 - [Science Graffito] 383
- Dispersion Statistics 384
 - Snapshot vs. Average 384
 - Center of Mass 384
 - Standard Deviation — Sigma 384
 - Gaussian Curve 385
 - Nominal Plume Edge 385
- Taylor's Statistical Theory 386
 - Passive Conservative Tracers 386
 - Dispersion Equation 386
 - Dispersion Near and Far from the Source 386
- Dispersion in Neutral & Stable Boundary Layers 387
 - Plume Rise 387
 - Neutral Boundary Layers 387
 - [Science Graffito] 387
 - Stable Boundary Layers 388
 - Gaussian Concentration Distribution 389
 - [Beyond Algebra: Diffusion Equation] 390
- Dispersion in Unstable Boundary Layers 390
 - Relevant Variables 391
 - Physical Variables 391
 - Mixed Layer Scaling Variables 391
 - Dimensionless Scales 391
 - Plume Centerline 392
 - Crosswind Integrated Concentration 392
 - Concentration 392
 - [On Doing Science: The Citizen Scientist] 392
 - [Science Graffito] 393
- Summary 394
 - Threads 394
- Exercises 394
 - Numerical Problems 394
 - Understanding & Critical Evaluation 396
 - Web-Enhanced Questions 397
 - Synthesis Questions 398

CHAPTER 18 • Climate Change 399

- [*Science Graffito*] 399
- Radiative Equilibrium 399
- Greenhouse Effect 401
- Atmospheric Window 402
- Water Vapor and Cloud Feedbacks 402
 - Cloudless Atmosphere 402
 - Cloudy Atmosphere 403
- Ice-Albedo-Temperature Feedback 403
- Daisyworld 404
 - Physics 404
 - Equilibrium and Homeostasis 405
- GCMs 406
- Sensitivity 407
 - Definition 407
 - Magnitudes 407
 - Usage 408
- Summary 408
 - Threads 409
 - [*On Doing Science: Ethics & Data Abuse*] 409
- Exercises 409
 - Numerical Problems 409
 - Understanding & Critical Evaluation 410
 - Web-Enhanced Questions 411
 - Synthesis Questions 411

CHAPTER 19 • Optics 413

- Ray Geometry 413
 - Reflection 414
 - Refraction 414
 - [*Focus: Newton and Colors*] 414
 - Huygens' Principle 416
 - Critical Angle 416
- Liquid Drop Optics 416
 - Reflection from Water 416
 - Primary Rainbow 417
 - Secondary Rainbow 418
 - Alexander's Dark Band 418
 - [*Focus: Rainbows and the Renaissance*] 419
- Ice-Crystal Optics 419
 - Sun Pillar 420
 - Parhelic Circle 420
 - Subsun 420
 - 22° Halo 421
 - 46° Halo 422
 - [*Science Graffito*] 423
 - Circumzenith Arc 423
 - Sun Dogs 424
 - [*Science Graffito*] 424

- Subsun Dogs 426
- Upper Tangent Arcs 426
- Scattering 427
 - Rayleigh Scattering 427
 - [*On Doing Science: Great Scientists Make Big Mistakes*] 428
 - Polarization 428
 - Geometric Scattering 428
 - Mie Scattering 429
- Diffraction 429
- Mirages 430
- Summary 431
 - Threads 431
 - [*Science Graffito*] 431
- Exercises 432
 - Numerical Problems 432
 - Understanding & Critical Evaluation 433
 - Web-Enhanced Questions 434
 - Synthesis Questions 434

APPENDIX A • Fundamentals of Science 435

- Dimensions and Units 436
 - Definitions 436
 - [*Science Graffito*] 436
 - Unit Conversion 436
- Functions and Finite Difference 437
 - [*Beyond Algebra: Calculus*] 438
- Relationships and Graphs 438
 - Linear 439
 - Logarithmic 439
 - Power 441
- On Doing Science 441
 - [*On Doing Science: Have Passion*] 442
- Summary 442
 - Threads 442
- Exercises 442
 - Numerical Problems 442
 - Understanding & Critical Evaluation 443
 - Web-Enhanced Questions 443
 - Synthesis Questions 444

APPENDIX B • Constants and Conversion Factors 445

Universal Constants 445
 Earth Characteristics 445
 Air and Water Characteristics 445
 Conversion Factors & Combined Parameters 446
 Other Information 446

APPENDIX C • Notation 447

Roman Symbols, Acronyms & Contractions 447
 Greek Symbols 455
 Operators 457
 Superscripts 457
 Subscripts 457
 Special Symbols 458

APPENDIX D • Additional Reading Material 459

The Atmosphere 459
 Radiation, Thermodynamics & Moisture 460
 Cloud & Satellite Pictures 460
 Cloud & Storm Processes 460
 Dynamics of Atmospheres & Oceans 460
 Boundary-Layers & Air Pollution 461
 Synoptics 461
 Numerical Weather Prediction & Chaos 461
 Hurricanes 462
 Climate Change 462
 Optics 462

APPENDIX E • Answers to Selected Exercises 463

Answers for Chapters 1 to 6 463
 Answers for Chapters 6 to 13 464
 Answers for Chapters 13 to 19 465
 Answers for Appendices A & H 465

APPENDIX F • Syllabus 467

The Student Mix 467
 Tests & Grading 467
 Textbooks & Homework 468
 Lectures & Weekly Schedule 468

APPENDIX G • Chapter Correspondences 469

Ahrens' *Essentials* 469
 Ahrens' *Meteorology Today* 469
 Holton's *Dynamic Meteorology* 470
 Wallace and Hobbs' *Atmospheric Science* 470

APPENDIX H • Turbulence Closure 471

Turbulence Closure Types 471
 [*On Doing Science: Parameterization Rules*] 472
 K-Theory 472
 Transilient Turbulence Theory 473
 Nonlocal Closure 473
 Concept 474
 Mathematical Framework 474
 [*Beyond Algebra: Matrices*] 475
 Nonlocal Flux 476
 [*Science Graffiti*] 477
 Summary 478
 Threads 478
 Exercises 478
 Numerical Problems 478
 Understanding & Critical Evaluation 479
 Web-Enhanced Questions 479
 Synthesis Questions 479

INDEX 481
