

**PROGRAMMING
THE
FINITE
ELEMENT
METHOD**

**I.M. SMITH
AND
D.V. GRIFFITHS
SECOND EDITION**

Contents

Preface to Second Edition	xi
Chapter 1 Preliminaries: Computer Strategies	1
1.0 Introduction	1
1.1 Computer Hardware	1
1.2 Store Management	2
1.3 Vector and Array Processors	3
1.4 Software	4
1.5 Portability of 'Subroutines' or 'Procedures'	6
1.6 Libraries	9
1.7 Structured Programming	9
1.8 Other Languages	11
1.9 Conclusions	13
1.10 References	14
Chapter 2 Spatial Discretisation by Finite Elements	15
2.0 Introduction	15
2.1 Rod Element	15
2.2 Rod Inertia Matrix	17
2.3 The Eigenvalue Equation	18
2.4 Beam Element	19
2.5 Beam Inertia Matrix	21
2.6 Beam with an Axial Force	21
2.7 Beam on Elastic Foundation	22
2.8 General Remarks on the Discretisation Process	23
2.9 Alternative Derivation of Element Stiffness	24
2.10 Two-dimensional Elements: Plane Stress and Strain	25
2.11 Energy Approach	29
2.12 Plane Element Inertia Matrix	29
2.13 Axisymmetric Stress and Strain	30
2.14 Three-dimensional Stress and Strain	31
2.15 Plate Bending Element	33
2.16 Summary of Element Equations for Solids	35
2.17 Flow of Fluids: Navier–Stokes Equations	36
2.18 Simplified Flow Equations	39
2.19 Simplified Fluid Flow: Steady State	40

2.20	Simplified Fluid Flow: Transient State	41
2.21	Simplified Fluid Flow with Advection	41
2.22	Further Coupled Equations: Biot Consolidation	42
2.23	Conclusions.	44
2.24	References	45
Chapter 3 Programming Finite Element Computations		47
3.0	Introduction	47
3.1	Local Coordinates for Quadrilateral Elements.	47
3.2	Numerical Integration for Quadrilaterals	50
3.3	Local Coordinates for Triangular Elements	50
3.4	Numerical Integration for Triangles	51
3.5	Element Assembly	52
3.6	Incorporation of Boundary Conditions	54
3.7	Programming Using Building Blocks	56
3.8	Black Box Routines	57
3.9	Special Purpose Routines	59
3.10	Solution of Equilibrium Equations.	79
3.11	Evaluation of Eigenvalues and Eigenvectors	80
3.12	Solution of First Order Time-dependent Problems	82
3.13	Solution of Coupled Navier–Stokes Problems.	85
3.14	Solution of Coupled Transient Problems	86
3.15	Solution of Second Order Time-dependent Problems	88
3.16	Conclusions	95
3.17	References	96
Chapter 4 Static Equilibrium of Structures		97
4.0	Introduction	97
Program 4.0	: Equilibrium of Uniform Beams	98
Program 4.1	: Equilibrium of Stepped Beams Incorporating Prescribed Displacement Boundary Conditions	104
Program 4.2	: Beam on Elastic Foundation with Numerically Integrated Stiffness and Mass Matrices	107
Program 4.3	: Equilibrium of Two-dimensional Rigid-jointed Frames	112
Program 4.4	: Equilibrium of Three-dimensional Rigid- jointed Frames.	117
Program 4.5	: Equilibrium of Two-dimensional Pin-jointed Trusses	121
Program 4.6	: Equilibrium of Three-dimensional Pin-jointed Trusses	124
Program 4.7	: Plastic Analysis of Two-dimensional Frames	127
Program 4.8	: Stability Analysis of Two-dimensional Frames	134
Program 4.9	: Equilibrium of Rectangular Plates in Bending	138

4.1	Conclusions	141
4.2	References	142
Chapter 5 Static Equilibrium of Linear Elastic Solids		143
5.0	Introduction	143
Program 5.0	: Plane Stress Analysis Using Three-node Triangles	144
Program 5.1	: Plane Stress Analysis Using Six-node Triangles	150
Program 5.2	: Plane Strain Analysis Using Fifteen-node Triangles	154
Program 5.3	: Plane Strain Analysis Using Four-node Quadrilaterals	157
Program 5.4	: Plane Strain Analysis Using Eight-node Quadrilaterals	161
Program 5.5	: Plane Strain Analysis Using Nine-node Quadrilaterals	165
Program 5.6	: Axisymmetric Strain Analysis Using Four- node Quadrilaterals	169
Program 5.7	: Non-axisymmetric Strain of Axisymmetric Solids Using Eight-node Quadrilaterals	172
Program 5.8	: Three-dimensional Analysis Using Four-noded Tetrahedra	178
Program 5.9	: Three-dimensional Analysis Using Eight- noded Brick Elements	182
Program 5.10	: Three-dimensional Analysis Using Twenty- noded Brick Elements	186
5.1	References	191
Chapter 6 Material Non-linearity		192
6.0	Introduction	192
6.1	Stress-Strain Behaviour	194
6.2	Stress Invariants	195
6.3	Failure Criteria	197
6.4	Generation of Body-loads	199
6.5	Visco-plasticity	200
6.6	Initial Stress	201
6.7	Corners on the Failure and Potential Surfaces	202
Program 6.0	: Plane Strain Bearing Capacity Analysis— Visco-plastic Method Using the Von Mises Criterion	203
Program 6.1	: Plane Strain Slope Stability Analysis—Visco- plastic Method Using the Mohr-Coulomb Criterion	211

Program 6.2	: Plane Strain Passive Earth Pressure Analysis—Initial Stress Method Using the Mohr–Coulomb Criterion	218
Program 6.3	: Axisymmetric ‘Undrained’ Analysis—Visco-plastic Method Using the Mohr–Coulomb Criterion	224
Program 6.4	: Three-dimensional Elasto-plastic Analysis—Visco-plastic Method Using the Mohr–Coulomb Criterion	232
6.8	References	237
Chapter 7	Steady State Flow	239
Program 7.0	: Solution of Laplace’s Equation Over a Plane Area Using Four-node Quadrilaterals	239
Program 7.1	: Analysis of Planar Free Surface Flow Using Four-node Quadrilaterals	245
7.1	Reference	249
Chapter 8	Transient Problems: First Order (Uncoupled)	250
8.0	Introduction	250
Program 8.0	: Solution of the Conduction Equation over a Rectangular Area	250
Program 8.1	: Solution of the Conduction Equation over a Cylinder	256
Program 8.2	: Solution of the Conduction Equation over a Rectangular Area Using an Explicit Method	259
Program 8.3	: Solution of the Conduction Equation over a Rectangle using an EBE Product Algorithm	262
8.1	Comparison of Programs 8.0, 8.2 and 8.3	266
Program 8.4	: Diffusion–Convection Problem over a Rectangle—Transformed Analysis	267
Program 8.5	: Diffusion–Convection Problem over a Rectangle—Untransformed Analysis	271
8.2	References	276
Chapter 9	‘Coupled’ Problems	277
9.0	Introduction	277
Program 9.0	: Solution of the Steady-state Navier–Stokes Equations over a Rectangle	278
9.1	Analysis of Soil Consolidation using Biot’s Theory	286
Program 9.1	: Biot Consolidation of a Rectangle in Plane Strain (Four-node Elements)	286
Program 9.2	: Biot Consolidation of a Rectangle in Plane Strain (Eight-node/Four-node Elements)	294
9.2	References	299

Chapter 10	Eigenvalue Problems	300
10.0	Introduction	300
	Program 10.0 : Eigenvalues and Eigenvectors of a Two-dimensional Frame of Beam-Column Elements—Consistent Mass	300
	Program 10.1 : Eigenvalues of a Rectangular Solid in Plane Strain—Four-node Quadrilaterals with Lumped Mass	304
	Program 10.2 : Eigenvalues and Eigenvectors of a Rectangular Solid in Plane Strain—Eight-node Quadrilaterals with Lumped Mass	308
	Program 10.3 : Eigenvalues and Eigenvectors of a Rectangular Solid in Plane Stress—Eight-node Quadrilaterals with Consistent Mass	312
	Program 10.4 : Eigenvalues and Eigenvectors of a Rectangular Solid in Plane Strain—Four-node Quadrilaterals with Consistent Mass	315
10.1	References	319
Chapter 11	Forced Vibrations.	320
11.0	Introduction	320
	Program 11.0 : Forced Vibration of a Rectangular Solid in Plane Strain Using Eight-node Quadrilaterals, Lumped Mass, Modal Superposition Method	320
	Program 11.1 : Forced Vibration of a Rectangular Solid in Plane Strain Using Eight-node Quadrilaterals—Lumped or Consistent Mass, Implicit Integration by Theta Method	325
	Program 11.2 : Forced Vibration of a Rectangular Elastic Solid in Plane Strain Using Eight-node Quadrilaterals—Lumped or Consistent Mass, Implicit Integration by Wilson Theta Method	330
	Program 11.3 : Forced Vibration of a Rectangular Solid in Plane Strain Using Eight-node Quadrilaterals—Lumped Mass, Complex Response Method.	333
	Program 11.4 : Forced Vibration of a Rectangular Elastoplastic Solid in Plane Strain Using Eight-node Quadrilaterals—Lumped Mass, Explicit Integration	337
	Program 11.5 : Forced Vibration of an Elastic Solid in Plane Strain Using Four-node Quadrilaterals—Lumped or Consistent Mass, Mixed Explicit/Implicit Integration	345
11.1	References	350

Chapter 12	Analysis of Piles and Pile Groups	351
12.0	Introduction	351
Program 12.0	: t - z Analysis of Axially Loaded Piles Using Two-noded Line Elements.	351
Program 12.1	: p - y Analysis of Laterally Loaded Piles Using Two-noded Beam Elements	359
Program 12.2	: Analysis of Vertically Loaded Pile Groups Using Two-noded Line Elements— t - z Springs for the Soil and Mindlin's Equation for the Interactions	365
Program 12.3	: Pile Drivability by Wave Equation—Two- node Line Elements—Implicit Integration in Time	372
12.1	References	378
Appendix 1	Consistent Nodal Loads	379
Appendix 2	Plastic Stress-Strain Matrices and Plastic Potential Derivatives	382
Appendix 3	Geometry Subroutines	386
Appendix 4	Alphabetic List of Building Block Subroutines	401
Appendix 5	Listings of Special Purpose Routines	415
Author Index	464
Subject Index	466
