

THE ENGINEERING DESIGN PROCESS

ATILA ERTAS
JESSE C. JONES

Contents

1	THE ENGINEERING DESIGN PROCESS	1
1.1	The Definition of Design	1
1.2	The Design Process	2
1.2.1	Recognition of Need	3
1.2.2	Conceptualization and Creativity	5
1.2.3	Feasibility Assessment	9
1.2.4	Establishing the Objectives and Criteria	10
1.2.5	Synthesis and Analysis in the Design Process	11
1.2.6	The Organizational/Work Breakdown Structure	12
1.2.7	Preliminary Design	14
1.2.8	Detailed Design	15
1.2.9	Production Planning and Tooling Design	20
1.2.10	Production	22
1.2.11	Design for Manufacture and Assembly	24
1.3	Other Important Design Considerations	26
1.3.1	Product Use	26
1.3.2	Design Life	26
1.3.3	Human Factors Considerations	27
1.4	Advanced Technology for the Design Process	28
1.4.1	Computer-Aided Design/Computer-Aided Manufacturing	28
1.4.2	Solids or Surfaces	30
1.4.3	Computer-Integrated Manufacturing	31
1.5	The Design Process	34
2	MANAGING DESIGN PROJECTS	37
2.1	The "Buck" Stops at the Manager's Desk	37
2.2	Management Techniques	38
2.2.1	Total Quality Management	39
2.3	Effective Project Management	41
2.4	Planning and Scheduling the Effort	47
2.4.1	The Gantt Chart	47
2.4.2	PERT Networks	48
2.4.3	The Critical Path Method	48
2.4.4	Summary	52
2.5	Clarifying the Project Objectives	52
2.5.1	The Objectives Tree Method	52
2.5.2	Coordination with Client and Management	54
2.6	Decision Making	55
2.7	Decision Matrices	56
2.7.1	Decision Trees	58
2.8	Improving the Design Product	62
2.8.1	Functional Cost Analysis	63

2.8.2	Failure Mode and Effects Analysis	63
2.8.3	Taguchi Methods	65
2.9	Engineer or Manager?	70
3	MODELING AND SIMULATION	73
3.1	Modeling in Engineering	73
3.2	Heuristic Modeling	75
3.3	Mathematical Modeling	77
3.4	Dimensional Analysis	80
3.5	Similarity Laws in Model Testing	84
3.5.1	Geometric Similarity	84
3.5.2	Kinematic Similarity	84
3.5.3	Dynamic Similarity	85
3.6	Wind and Water Tunnels	85
3.7	Numerical Modeling	86
3.7.1	The Finite Difference Method	86
3.7.2	The Finite Element Method	89
3.8	Monte Carlo Simulation	90
3.9	Discrete Event Simulation	94
3.10	Knowledge-Based Systems in the Design Process	96
3.10.1	An Expert System for Preliminary Design of Structures	96
3.10.2	Selection of Expert System Tools	99
3.10.3	Determining the Suitability of the Candidate Problem	99
3.10.4	Knowledge Representation Schemes	99
4	DESIGN ANALYSES FOR MATERIAL SELECTION	103
4.1	Material Selection	103
4.1.1	Analysis of Material Requirements	104
4.1.2	Selection and Evaluation of Candidate Material	109
4.1.3	Decision	110
4.2	Design Analysis for Fatigue Resistance	112
4.3	Design Analysis Using Fracture Mechanics	118
4.3.1	Mode I Stress State in a Crack	118
4.3.2	Stress-Intensity Factor Equations	120
4.3.3	Leak Before Break	124
4.3.4	Fatigue Crack Propagation	128
4.3.5	Design with Materials	134
4.4	Design Analysis for Composite Materials	135
4.4.1	Stress-Strain Relations in Composite Materials	137
4.4.2	Failure Criteria of Composite Laminates	142
4.5	Residual (Internal) Stress Considerations	144
4.5.1	Sources of Residual Stress	144
4.5.2	Effect of Residual Stresses	145
4.5.3	Measurement of Residual Stresses	148
4.6	Material Standards and Specifications	149
4.6.1	Organizations Involved in Standards and Specifications Preparation	149
4.7	Corrosion Considerations	152
4.7.1	Atmospheric Corrosion	153
4.7.2	Galvanic Corrosion	153
4.7.3	Crevice Corrosion	153

- 4.7.4 Pitting Corrosion 153
- 4.7.5 Intergranular Corrosion 153
- 4.7.6 Erosion Corrosion 153
- 4.7.7 Stress-Corrosion Cracking 154

5 ENGINEERING ECONOMICS 157

- 5.1 Project/Product Cost and the Engineer 157**
- 5.2 Cost Analysis and Control 161**
 - 5.2.1 Cost Categories 162
 - 5.2.2 Cost Estimating 165
 - 5.2.3 Life-Cycle Costing 166
- 5.3 Important Economic Concepts 170**
 - 5.3.1 Interest 170
 - 5.3.2 Equivalence and the Time Value of Money 171
 - 5.3.3 Cash Flow 172
 - 5.3.4 Present Worth Analysis 173
 - 5.3.5 Internal Rate-of-Return Analysis 175
 - 5.3.6 Payback Period 176
 - 5.3.7 Depreciation and Taxes 178
 - 5.3.8 Inflation and Deflation 180
- 5.4 Selecting an Appropriate Rate of Return 181**
- 5.5 Evaluation of Economic Alternatives 183**
 - 5.5.1 Evaluation by Economic Equivalence 184
 - 5.5.2 The Economic Optimization Function 185
 - 5.5.3 Evaluation Using the Rate of Return on Incremental Investment 185
 - 5.5.4 Cost Model for Decision Making 187

6 OPTIMIZATION IN DESIGN 197

- 6.1 Introduction 197**
- 6.2 Mathematical Models and Optimization Methods 199**
 - 6.2.1 The Differential Calculus Method 199
 - 6.2.2 The Lagrange Multiplier Method 202
 - 6.2.3 Search Methods 203
 - 6.2.4 Multivariable Search Method 209
 - 6.2.5 Linear Programming 215
 - 6.2.6 Nonlinear Programming Problems 218
 - 6.2.7 Multicriterion Optimization 220

7 STATISTICAL DECISIONS 223

- 7.1 Random Variable 223**
- 7.2 Measure of Central Tendency 224**
 - 7.2.1 Mean or Arithmetic Average 225
 - 7.2.2 Median 227
 - 7.2.3 Mode 227
- 7.3 Measure of Variability 227**
 - 7.3.1 Range 227
 - 7.3.2 Mean Deviation 228
 - 7.3.3 Standard Deviation 228
 - 7.3.4 Variance 229
 - 7.3.5 Measure of Skewness 229

7.4	Probability Distributions	230
7.4.1	Discrete Distributions	230
7.4.2	Important Continuous Life Test Distributions	232
7.5	Sampling Distributions	238
7.5.1	Sampling Distributions Based on Sample Means and The Central Limit Theorem (Sampling Distribution of the Mean)	238
7.5.2	Student's <i>t</i> Distribution	239
7.5.3	Chi-Square Distribution (X^2 Distribution)	240
7.5.4	<i>F</i> Distribution	240
7.6	Statistical Inference	241
7.6.1	Estimation	241
7.7	Statistical Hypothesis Testing	243
7.8	Statistical Experimental Design	253
7.8.1	Up-and-Down Method	253
7.8.2	Taguchi Technique (Orthogonal or Factorial Experiment)	257
7.8.3	Regression and Correlation Analysis	270
7.8.4	Introduction to Statistical Methods Using the SAS Package	272
8	DESIGN FOR RELIABILITY	285
8.1	Introduction	285
8.2	Definitions and Probability Laws	286
8.2.1	Independent Events	286
8.2.2	Conditional Events	288
8.2.3	Bayes' Theorem	288
8.3	Basic Reliability Equation	289
8.3.1	Mean Time to Failure (MTTF)	290
8.4	Probability Distribution Functions Used in Reliability	290
8.4.1	Bathtub Hazard Distribution	290
8.4.2	Exponential Distribution	292
8.4.3	Weibull Distribution	293
8.5	Basic System Reliability	295
8.5.1	Series System	295
8.5.2	Parallel Systems	296
8.5.3	Multistage System with Parallel Redundancy	297
8.5.4	Parametric Method in System Reliability Evaluation	298
8.6	Optimization of System Reliability	300
8.6.1	Reliability Optimization for a Given Cost Constraint	301
8.6.2	Cost Minimization for a Given Reliability Constraint	302
8.6.3	Optimization Reliability for a Given Cost and Weight Constraint	306
8.7	Maintainability	311
8.7.1	Maintenance	312
8.8	Availability	313
8.9	Dependability	316
8.10	Fault Tree Analysis	318
8.11	Probabilistic Design	320
8.11.1	Safety Factor	321
8.11.2	Interference Model	322
8.12	Worst-Case Design	324

9	SAFETY AND ENVIRONMENTAL PROTECTION	329
9.1	Our Contaminated Environment	329
9.2	The Engineer and the Environment	331
9.3	The Environmental Protection Agency	332
9.4	Groundwater Contamination	334
9.5	Soil and Groundwater Restoration	340
9.6	Design of a Packed Tower	348
9.6.1	Sizing the Tower Diameter	351
9.6.2	Determining the Height of the Tower	353
9.7	Air Pollution and Toxic Chemical Exposure	355
9.7.1	Particulate Contamination	357
9.8	Air Contamination from Hazardous Liquid Spills	364
9.9	Occupational Safety and Health	370
9.9.1	Occupational Safety and Health in Design	371
9.10	The Safety Engineer	372
9.11	Closure	374
10	ENGINEERING ETHICS	377
10.1	Ethics in Industry	377
10.2	Ethics and the University	378
10.3	The Foundation of Ethics	379
10.4	Ethics in Engineering	382
10.5	Legal Responsibilities of Engineers	384
10.6	Codes of Ethics	386
10.7	Code Rules and Interpretations	390
10.8	Code of Ethics for Engineers	408
11	COMMUNICATIONS IN ENGINEERING	415
11.1	Effective Communications	415
11.2	The Formal Engineering Report	416
11.2.1	The Abstract	418
11.2.2	The Introduction	418
11.2.3	Technical Approach (Theory)	419
11.2.4	Test Setup	421
11.2.5	Procedure	422
11.2.6	Results and Discussion	423
11.2.7	Conclusions	424
11.2.8	References	425
11.2.9	Appendix	426
11.3	Proposal Preparation	426
11.3.1	Background/Problem Statement	427
11.3.2	Objective(s)	428
11.3.3	Technical Approach	428
11.3.4	Budget	428
11.3.5	Organization and Capabilities	428
11.4	Oral Communications	429
11.5	Oral Presentations	430
11.5.1	Organizing the Oral Presentation	431
11.5.2	Use of Visual Aids	433

11.5.3	Types of Visual Aids	433
11.5.4	Preparation of Slides and Transparencies	434
11.6	A Final Word on Communications	434

APPENDICES 435

A PROBLEMS 435

B DESIGN PROJECTS 459

C STATISTICAL TABLES 477

D COMPUTER PROGRAMS 495

D.1	Program Listing for Maple for Evaluating the Eigenvalues	495
D.2	Maximization of Reliability for a Given Cost Constraint	498
D.3	Maximization of a Cost for a Given Reliability Constraint	500
D.4	Reliability Maximization with Multiple Constraint	503

E A PROPOSAL: THE EFFECT OF THE LONG-TERM USE OF METHANOL 509
