

ERCOFTAC SERIES

Three-Dimensional Velocity and Vorticity Measuring and Image Analysis Techniques

Edited by Th. Dracos

KLUWER ACADEMIC PUBLISHERS

Table of Contents

Preface	xii
Introduction	xiv
Chapter I	
Multi-Hot-Wire Anemometry	xviii
Determination of 3-D Velocity and Vorticity Vectors in Turbulent Flows by Multi-Hot-Wire Anemometry, G. Lemonis , T. Dracos	
1. Introduction	1
2. Measuring Principle, Probe Design and Operation	6
2.1. Basic Principles of Hot-Wire Anemometry	6
2.2. Compensation of Ambient Temperature Variations	7
2.3 Optimum Overheat Ratio	9
2.4. Directional Sensitivity of Hot-Wires	13
2.5. Layout of Hot-Wire Probes for 3-D Velocity and Vorticity Measurements	16
2.6. Construction of Multi-Hot-Wire Probes	19
3. Calibration of Hot-Wire Probes and Determination of 3-D Velocity	22
3.1. Calibration Procedure and Data Reduction	22
3.2. Hot-Wire Probe Calibration Facility	26
4. Determination of Velocity Derivatives and Derivative Depending Quantities	28
4.1. Determination of Velocity Derivatives	28
4.2. Computation of Quantities Depending on Velocity Derivatives	31
4.3. Accuracy and Limitations	32
5. Measuring Technique Performance Tests	33
5.1. Statistics of Velocity Fluctuations in Turbulent Boundary Layer	34
5.2. Isotropy Relations in Turbulent Grid Flow	35
5.3. Continuity Equation	36
5.4. Statistics of Vorticity Fluctuations in Turbulent Boundary Layer	36
5.5. Vorticity Alignment and Enstrophy Production	37
5.6. Length Scales and Local Dissipation in Turbulent Boundary Layer	38
6. Concluding Remarks	39
7. References	40
The Multi channel Constant Temperature Anemometer, F.E. Jørgensen	
1. Introduction	43
2. The Computer Controlled Constant Temperature Anemometer	43
2.1. System Overview	43
2.2. Hardware Implementation	44

2.3. Software Implementation	46
3. Multisensor Probes	51
3.1. Probe Selection	51
3.2. X-Probes	51
3.2. Triaxial Probes	55
4. Conclusions	57
5. References	58

Chapter II

Particle Image Velocimetry

Particle Image Velocimetry: A New Approach in Experimental Fluid Research, W.T. Lai

1. Introduction	61
2. Pixel Resolution and the Resolution of Particle Displacement	64
3. Directional Ambiguity in PIV Measurements	67
4. Crosscorrelation Analysis Technique in PIV Measurements	73
4.1. Convection Flow in an Enclosure	75
4.2. Interaction of a Jet to Free Stream Water Flow	76
4.3. Water Spray Flow	78
5. Real-Time Image Capture and Batch Image Processing	80
6. Three-Dimensional Measurements with PIV	84
6.1. Stereoscopic Approach	84
6.2. Holographic Approach	89
7. Conclusions	90
8. References	90

Real-Time Signal Processing in Particle Image Velocimetry, D.R. McCluskey, E. Hayes

Abstract

1. Introduction	93
1.1. Basic Principle	93
1.2. PIV Measurement Process	94
1.3. Seeding Requirements	95
1.4. Illumination	95
1.5. Illumination Sources	96
1.6. Recording a Flow Field	97
2. The Need for a Real Time PIV Processor	97
2.1. Synchronisation of Pulsed Illumination Source and Recording	97
2.1.1. Continuous Lasers	97
2.1.2. Pulsed Lasers	98
2.2. Optimisation of PIV Records	99
2.3. Image Map Analysis	99
3. An Innovative Real Time Processor for PIV	100
3.1. PIV 2000 Processor	100

3.2. Real Time PIV in Practice	105
3.2.1. Camera Synchronisation and Control	105
3.3. Real Time Vs Conventional Frame Grabber Systems	106
3.4. Database Organisation	107
3.5. Set-up and Processing	107
3.6. Analysis	108
4. Benefits of Real Time Processing	109
4.1. Multiple Analysis Using Vector Overlap	109
4.2. Multiple Choice Vector Map Validation, Data Analysis and Display	109
4.3. Multi-Camera Situations	110
4.4. Long Series of Vector Maps	110
5. Experiments with Real Time Processing	111
6. Summary	111
7. Acknowledgements	111
8. References	111

Investigation of Unsteady FLOW Fields in Wind Tunnels by Means of Particle Image Velocimetry, J. Kompenhans, M. Raffel, C. Willert, M. Wiegel, C. Kähler, A. Schröder, B. Bretthauer, H. Vollmers, B. Stasicki

1. Introduction	113
2. Experimental Set Up for PIV	114
3. Aerodynamic Applications	118
3.1. Grid Turbulence	118
3.2. Boundary Layer Instabilities	119
3.3. Turbulent Boundary Layer	121
3.4. Vortex Shedding from a Cylinder	122
3.4. Rotor	123
3.5. Cascade Blade with Cooling Air Ejection at $Ma=1.27$	125
4. Conclusion	126
5. References	127

Three-Dimensional Particle Velocimetry, K.D. Hinsch, H. Hinrichs

1. Introduction	129
2. Light Sheet Techniques	131
2.1. Classical PIV: A 2-D Slice from the Flow	131
2.2. Stereoscopic PIV	135
3. Holographic Particle Velocimetry	140
3.1. Off-Axis Holography of Deep Particle Fields	143
3.2. In-line Particle Holography	145
3.3. Multiple Light Sheet Holography	146
4. Conclusions	149
5. Acknowledgement	149
6. References	150

Chapter III
Particle Tracking Velocimetry

Particle Tracking Velocimetry (PTV), Basic Concepts, Th. Dracos	155
1. Introduction	156
2. Basic Concepts of Particle Tracking	159
3. References	
Videogrammetry: Methodology and PTV/LIF Applications, A. Gruen	161
1. Introduction	161
2. Defining "Videogrammetry"	163
3. Basic Measurement Concept	164
3.1. The Multi-Image Measurement Mode	165
3.2. The Bundle Method	165
3.2.1. The Mathematical Model	168
3.2.2. Least Squares Estimation	169
3.3. Precision and Reliability	170
4. System Aspects	173
4.1. CCD-Cameras and Image Data Transfer	179
5. Calibration and Self-Calibration	182
6. High Precision Image Measurement	183
6.1. Center of Gravity Algorithm	183
6.2. 1-D Least Squares Matching	185
6.3. 2-D Least Squares Matching	189
7. References	
Contributions of Digital Photogrammetry to 3-D PTV, H.-G. Maas	191
1. Introduction	193
2. Mathematical Model	193
2.1. Additional Parameters for Systematic Image Deformation	193
2.2. Multi-Media Geometry	193
2.2.1. Development of a Multimedia Module	195
2.2.2. Direct Solution for the Spatial Intersection	197
2.2.3. Further Influences of the Multimedia Environment	197
2.3. Handling of the Mathematical Model	198
3. System Calibration	199
4. Algorithmic Aspects	199
4.1. Image Processing	201
4.2. Establishment of Stereoscopic Correspondences	205
4.3. 3-D Coordinate Computation	205
5. Discussion of the Potential of the Methods	205
6. References	206

Particle Tracking in Three-Dimensional Space, Th. Dracos	
1. Introduction	209
2. Basic Concept	211
3. Model of the Tracking Procedure	213
3.1. Correlation Neighbourhood in the Current Frame	213
3.2. Prediction of the Location of a Particle in the Next Frame	214
3.3. Establishment of Links	215
3.4. Size of the Correlation and Search Volumes	217
3.4.1. Correlation Volume in [f+0]	217
3.4.2. Size of the Search Volumes in [f+1] and [f±2]	218
4. Validation of the Tracking Procedure	220
4.1. Results	221
4.1.1. Tracking without Noise and Data-Loss	221
4.1.2. Influence of Noise and Data-Loss	222
5. Determination of Velocity Vectors	224
6. References	226

Establishment of a Videogrammetric PTV System, M. Virant, Th. Dracos	
1. Introduction	229
2. The Observation Volume	230
3. Sensor Properties and Particle Imaging	231
4. Illumination	235
5. Flow Markers	239
6. Overlapping of Particle Images	241
7. Calibration	243
8. Control, Storage and Processing	244
9. Accuracy and Performance Tests	247
9.1. Accuracy Tests	247
9.1.1. Accuracy of Particle Coordinates	247
9.1.2. Accuracy of the Velocity Components	248
9.2. Performance Tests	250
9.2.1. Acceleration Tests	250
9.2.2. Measurements in Turbulent Flow	253
10. Present Limitations and Future Developments of PTV	254
11. References	

Chapter IV

Laser Induced Fluorescence Velocimetry

Laser Induced Fluorescence Velocimetry , Basic Concepts, Th. Dracos	
1. Introduction	257
2. Basic Principle of the Inversion Method	259

3. Videogrammetric Concept	260
4. Applicability of LIF Velocimetry Methods	261
5. References	261

Adaptive Least-Squares-Matching for Accurate Tracking of Patterns in Voxel Data

Sequences, H.-G. Maas

1. Introduction	265
2. Least-Squares-Matching for Tracking of Flow Patterns	266
3. 3-D Least Squares Matching	267
4. Additional Constraints	269
4.1. Incompressibility Constraint	269
4.2. Intensity Constraint	270
4.3. Smoothness of Velocity Field	271
4.4. Multi-Patch Matching	272
4.5. Global Solution	272
5. Strategies	273
6. Some Results	274
7. Conclusion	275
8. References	276

Establishment of a Tomographic Laser Induced Fluorescence System,

S. Deusch, Th. Dracos, P. Rys

1. Introduction	277
2. Basic Considerations	277
3. Fluorescent Tracers for LIF Imaging	282
3.1. Laser Light Source	284
3.2. Beam Shaping Optics	284
3.3. Cylindrical Lens Light Sheets	286
3.4. Laser Sheets by Rotatory Scanners	286
3.4.1. Polygonal Mirrors	288
3.4.2. Oscillating Mirrors	289
3.4.3. Prism Scanners	290
3.5. Z-Shift of Laser Sheet for 3-D LIF	293
3.6. High Quality Optics versus Laser Power	294
4. Imaging Devices	294
5. References	296

Application and Performance of LIF-Velocimetry, G. J. Merkel, Th. Dracos, P. Rys,

F.S. Rys

1. Introduction	299
2. Determination of the Velocity and the Velocity Gradient Tensor	299
3. Experiments	301
3.1. The Round Jet	301

3.2. Experimental Facility	303
3.3. Parameters of the Experiment	304
4. Application of LIF-Velocimetry by LSM	306
5. Performance Tests	306
6. Concluding Remarks	309
7. References	310
