

K. Hirota (Ed.)

Industrial Applications of Fuzzy Technology

Translated by H. Solomon

Springer-Verlag

Table of Contents

1	THE BASIS OF FUZZY THEORY	1
1.1	Introduction	1
1.2	Fuzzy set theory	2
1.2.1	Review of crisp sets	2
1.2.2	Fuzzy sets	4
1.3	Fuzzy inference	6
1.4	Conclusion	10
2	ERIC — A Shell for Real-time Process Control	11
2.1	Background	11
2.2	The design of ERIC	12
2.2.1	Information processing for control operations	12
2.2.2	Installation in a real-time computer system	13
2.3	Internal composition of the shell	14
2.4	ERIC's knowledge expressions	15
2.4.1	Working memory	15
2.4.2	Rule sets	19
2.5	An overview of ERIC inference processing	22
2.5.1	Rule setting processing	22
2.6	Fuzzy processing in ERIC	24
2.6.1	Fuzzy logic, which is suited for process control	24

2.6.2	Fuzzy inference processing in ERIC	28
2.7	Functions for real-time control	30
2.8	In conclusion	32
3	MODEL BASE FUZZY INFERENCE	35
3.1	General concepts	35
3.1.1	Introduction	35
3.1.2	Multi-purpose systems and intelligence	36
3.1.3	Human problem-solving processing	37
3.1.4	IS intellectual levels	38
3.2	Model - based fuzzy inference	39
3.2.1	Outline of model-based fuzzy inference	39
3.2.2	Instructions and reporting among intellectual levels	40
3.2.3	Differences between IS intellectual levels	42
3.3	Model-based fuzzy inference in intellectual level 2	44
3.3.1	Roles and observations (I2)	44
3.3.2	Intellectual level 2 dynamics	45
3.3.3	State-space (I2, D2)	46
3.3.4	Action plans (D2, S2)	47
3.4	Adaptive systems	48
3.4.1	Learning	48
3.4.2	Fuzzy adaptation	49
3.5	Intellectual level 3, 4 model - based fuzzy inference	52
3.5.1	Goal - oriented inference systems [7]	52
3.5.2	Intellectual level 3 condition judgment	54
3.5.3	Intellectual level 4 decision making	55
3.5.4	Intellectual level 3 goal determination	58
3.6	In conclusion	59

4	FUZZY DEVELOPMENT STATIONS AND FUZZY INFERENCE PROCESSORS	63
4.1	Background to development	63
4.2	Characteristics of the Mycom Fuzzy Work Station	64
4.2.1	Simulation.....	64
4.2.2	Flexibility	64
4.2.3	Easy to operate	65
4.2.4	The fuzzy inference engine.....	65
4.3	Configuration of the Mycom Fuzzy Station.....	65
4.3.1	Host computer (Table 4.1)	67
4.3.2	Development support software (Table 4.2).....	67
4.3.3	Communication expansion board	67
4.3.4	Fuzzy controller (FBEN, FCAS)	67
4.3.5	Fuzzy inference processors for special uses.....	68
4.3.6	Signal processing board.....	68
4.4	Fuzzy Work Station functions.....	69
4.4.1	Define Membership Function.....	69
4.4.2	Edit Production Rules	72
4.4.3	Calculate Fuzzy Operations.....	73
4.4.4	Start Simulation.....	77
4.4.5	Compile to Transmitter-file	81
4.4.6	Implementation to Emulator (Communicate with FCAS) (standard specifications)	82
4.4.7	Execution (engine specifications) (Start Fuzzy Control System with Input/Output Board).....	82
4.4.8	Verification of differences among fuzzy operation methods with the Fuzzy Work Station	83
4.4.9	Miscellaneous.....	86
4.5	Characteristics of the Virtual Paging Fuzzy Inference Chip....	86

4.5.1	Characteristics of the Special Use Fuzzy Inference Chip	88
4.5.2	Future fuzzy inference processors	92
4.6	Summary	93
5	FUZZY PROCESSORS	95
5.1	Introduction	95
5.2	The FP-3000 digital fuzzy processor	96
5.2.1	Outline of the FP-3000	96
5.2.2	Application examples	104
5.2.3	Development support tools	105
5.3	Analogue fuzzy processors	110
5.3.1	Outline of the analogue fuzzy hybrid IC	110
5.3.2	The TG005MC Inference chip	114
5.3.3	The TB010PL Defuzzification chip	125
5.3.4	Development support tools	129
5.4	In conclusion	133
6	FUZZY CONTROLLERS AND THEIR APPLICATION TO WATER TREATMENT	135
6.1	Introduction	135
6.2	The general fuzzy controller design procedure	135
6.2.1	What fuzzy control is	135
6.2.2	Fuzzy inference methods	136
6.2.3	Design of control rules	137
6.2.4	Fuzzy controllers	138
6.3	The FRUITAX general purpose fuzzy control system	141
6.3.1	Development of FRUITAX	141
6.3.2	The FRUITAX series	141
6.3.3	Functions	143
6.3.4	Application fields	145

6.3.5	The development of FRUITAX-L	145
6.4	An example of fuzzy control in the water treatment field	147
6.5	Cooperative control of rain water pumps by an adaptive type controller	148
6.5.1	Outline of a rain water pumping station	148
6.5.2	Fuzzy control of pumping stations	150
6.5.3	Pumping station coordination simulation.....	152
6.6	In conclusion	158
7	A COMBUSTION CONTROL SYSTEM FOR A REFUSE INCINERATION PLANT	161
7.1	Introduction — Fuzziness incorporated into a refuse incineration plant	161
7.2	Characteristics of refuse incineration.....	164
7.3	Fuzzy control methods and problems	167
7.3.1	Fuzzy inference methods.....	167
7.3.2	Characteristics and problems of fuzzy inference	170
7.3.3	An ordinal structure model of control rules.....	174
7.4	A fuzzy control system	177
7.4.1	Composition of the fuzzy control system	177
7.4.2	Fuzzy sensors.....	178
7.4.3	Fuzzy control rules	181
7.5	An actual incinerator test	184
7.6	In conclusion	188
8	FUZZY CONTROL FOR JAPANESE <i>SAKE</i> — Fuzzy decision controller and fuzzy simulator for Japanese <i>sake</i> fermentation.....	193
8.1	Introduction	193
8.1.1	Background	193
8.1.2	On the <i>sake</i> brewing process	193
8.2	Developing a fuzzy decision system to perform Japanese <i>sake</i> fermentation control.....	195

8.2.1	Analysis samples	195
8.2.2	Result of brewing unrefined <i>sake</i> in the model brewery	195
8.2.3	Conversion to fuzzy control rules	198
8.2.4	Fuzzy simulator construction	201
8.3	Test brewing using a pilot plant.....	204
8.3.1	Brewing conditions	204
8.3.2	Test brewing by manual operation	204
8.3.3	Test brewing using fuzzy control	206
8.4	Commercial scale application	209
8.4.1	Brewing conditions	209
8.4.2	Test results.....	210
8.5	Summary	211
9	ELEVATOR CONTROL USING A FUZZY RULE BASE	213
9.1	Introduction	213
9.2	Outline of elevator group control	213
9.2.1	What is a group control system?.....	213
9.2.2	Procedure for determining which cage to assign	218
9.3	An elevator group control system using a fuzzy rule base.....	221
9.3.1	System construction concept	221
9.3.2	Fuzzy rule base construction and action	223
9.3.3	Computation of rule degrees of applicability, and execution examples.....	227
9.3.4	Rule extraction.....	231
9.4	A simulation example	232
9.5	In conclusion.....	237
10	A HIGHWAY TUNNEL VENTILATION CONTROL SYSTEM USING FUZZY CONTROL.....	239
10.1	Introduction	239

10.2	Outline of a longitudinal flow ventilation system	239
10.3	A ventilation control system using fuzzy control.....	241
10.3.1	Traffic volume prediction	244
10.3.2	The ventilation operation plan	245
10.3.3	Judgment regarding change of ventilating machine combination	246
10.3.4	Fuzzy air flow speed and concentration control.....	248
10.3.5	Level control	252
10.3.6	Emergency control.....	252
10.4	Results of applying this system	252
10.5	Future problems.....	256
11	FUZZY CONTROL AND EXAMPLES OF APPLICATIONS.....	259
11.1	Introduction	259
11.2	Trends in markets and technology	259
11.2.1	Trends in markets	259
11.2.2	Technological trends.....	261
11.3	Skilled operator's operation and fuzzy control system	263
11.3.1	Skilled operator's operation.....	263
11.3.2	Fuzzy control systems	263
11.4	Examples of applications of predictive fuzzy control systems .	265
11.4.1	Application to an automatic train operation system....	265
11.4.2	Automatic container crane operation system	269
11.4.3	A highway tunnel ventilation control system	273
11.4.4	A fuzzy fully automatic washing machine	276
11.5	Future expectations	279
11.6	In conclusion.....	281
12	APPLICATION OF FUZZY THEORY TO HOME APPLIANCES	283
12.1	Introduction	283

12.2	Fuzzy inference simplification methods and tuning methods ..	284
12.2.1	Simplification of fuzzy inference.....	284
12.2.2	Tuning by means of a neural network	285
12.3	Application to electrical appliances	290
12.3.1	A fuzzy fully automatic washing machine	291
12.3.2	A fuzzy vacuum cleaner.....	299
12.3.3	Future development of fuzzy household electrical appliances	304
12.4	Application to video equipment.....	305
12.5	In conclusion.....	308
